Soy meal

Stan still condition persists for almost all the region due to strong demand from the domestic centers and high export demand. Soy meal domestic market prices in other centers remain range bound. Hardly any change could be noticed as compared to the previous day close. Stocks in stronger hand lead to hike in the meal prices. Stocks are still in the stronger hand and releasing stocks slowly to fetch the premiums. Prices are expected to improve in coming days and try to align with the port rates. That will result into reduced export and more domestic consumption followed by price stabilization. Soy meal prices still maintain the higher levels in different centers amid shortage of seeds for crushing. Reduced arrivals results into higher seed prices in the Mandi and plant rate were also quoted high, thereby causing the meal prices to go up. High prices quoted at the ports by the buyers also provided underlying support. Overall scenario remains in favour of bulls. Rising prices of soybean due to poor stocks with farmers would lead to drop in crushing next month, further reducing meal availability. Sentiments at the major centers observed range bound to slight improvement as the prices of the seeds are improving day by day with somewhat reduced arrivals. The stocks are in the higher hands as they are releasing it for fetching premiums. Plants are working for limited period of time and even working for limited hours. Unavailability of crushing seeds by the miller results into spurt in the prices in the physical market. High demand from the export end is also supporting the market up and providing underlying support.
