

Price Drivers

- ❖ Expectations of macro tightening policies, such as a rate hike.
- ❖ Lower arrivals and slightly weak demand.
- ❖ Cotton production in India in the 2010-11 season is expected to climb to 32.9 million bales.
- ❖ India and U.S to plant more in 2011-12.
- ❖ Tightening supply and higher cost for cotton seeds.

Fundamental Analysis

- ✓ Markets remained mixed on Saturday as well with Gujarat, Maharashtra and Haryana remaining steady to firm and Punjab ends lower.
- ✓ Markets remained lower on expectations of more macro tightening policies, such as a rate hike and whether the U.S. dollar has established the rebound trend.
- ✓ Also, globally sources added that cotton crops damaged by flooding in Australia may partly recover in the next few months helping to maintain the production outlook.
- ✓ Markets could also see more downtrend after raw cotton production in India in the 2010-11 season is expected to climb to 32.9 million bales (1 bale = 170 kg) from the previously assessed figure of 32.5 million bales by Cotton Advisory Board (CAB).
- ✓ Sources also added that India is expected to plant 11.2 million hectares in 2011-12, which is a slight increase from the 11million hectares in 2010-11.
- ✓ However U.S analysts said that markets could continue to move higher due to market speculation of tightening supply and higher cost for cotton seeds.
- ✓ Sources also added that globally markets could see more weakness after U.S. production is expected to increase at least by 10% to 19.38 million bales. U.S acreage is expected increase to 12.83 million acres.

In the short term markets could move lower on weak demand in the market. Cotton markets could move lower on higher production estimates from U.S and India for 2011-12.

Prices (Rs/qtl) and Arrivals (Bales) at Key Markets
