

Price Drivers

- Bumper production due to higher area likely, huge stock .Concern over rising temperature. Additional procurement planned
- Ban on wheat export continues despite surplus stock. OMMS prices may be slashed, under consideration, Decision on export unlikely. Govt. intention to augment supply, 3.5 MMT foodgrains allocated to the poor and retailers.
- Concern over rising temperature increased.
- Pressure to offload wheat on FCI
- Global wheat supply is projected lower and overseas trade is raised by 0.5 MMT

Analysis: Technical

- Candlestick formation shows sellers active participation in the future market.
- Closing of prices above 9 and 18 day SMA's, denotes increase in bullish momentum.
- MACD is moving down in positive territory, thus denoting weakness in the market.
- RSI is moving down in neutral zone, thus indicating decrease in bullish momentum in short term.
- Wheat is likely to trade range bound with weak bias during the next trading session. Players should opt selling at higher level.

Trade Recommendation: Wheat NCDEX (Feb.)

Spot Market Analysis

Domestic (India) Market

- Wheat market remained under pressure on back of lower demand, better crop prospects, higher area coverage, congenial weather and improved supply from federal govt. stock. Standing crop in Punjab, Haryana, U.P., Rajasthan, M.P. and Bihar is in excellent condition and lower temperature at night is considered to be favourable for better crop growth. However, concern over rising day temperature is still intact and it may have direct impact on final yield.
- Prices are likely to remain under pressure in weeks ahead. There is no report of any pest attack from any growing regions. Temperature at night is lower and crop growth is said to be satisfactory so far Which could translate into a higher production of around 1 mil tonnes compared to last year, subject to favourable weather till harvest in April 2011. As on 1st January, 11 govt. wheat holding was 21.5 MMT, much more than actual requirement..
- India's wheat planting until Feb. 4 rose 3% from a year earlier to a record, brightening prospects of a bumper crop. The wheat sowing area increased to 29.18 million hectares from 28.32 million hectares, the government data showed. India, the world's second-largest wheat grower, aims to produce 82 million tons of wheat in 2010-11, up 1.6% from the previous year.
- Punjab has storing capacity of 137.68 lakh tons of foodgrains including CWC and SWC. Just the same way Haryana has collective storage capacity is 46.6 lakh tons, Rajasthan has 27.81 lakh tons and U.P. has 70.83 lakh tons. Total capacity at all India level is 603 lakh tons.
- The world's farmers will produce only slightly more wheat in 2011, the Canadian Wheat Board said. The world will produce 649.5 million tonnes of all types of wheat, up 0.6% from the 2010 crop, he said. Canada will harvest 23.8 million tonnes of wheat, the CWB said, up 2.9% from last year.
- Global International Grains Council has increased its estimate for global wheat production by 23 million tons next season. In its latest report, the influential intergovernmental group mainly attributed better Russian weather for the newly projected target of 670 million tones. The figure represents an improvement of 3.6% year on year, although leaves production short of the record 683m tonnes set three years ago, and reflected a rise in area greater than the 2% forecast last month, with farmers expected to stretch even further to exploit soaring grain markets.

Wheat could not sustain its uptrend on higher area coverage, favourable weather, additional allocation for PDS and govt. intention to augment supply in the physical market. Prices are likely to come down on record production prospects and hope for higher supply from govt.'s granary. Flour millers are actively buying wheat from all available sources including FCI and buying is likely to continue in January, February and March. Prices are likely to be under pressure.
