

Price Drivers

- Expectation of record crop, huge stock to be offloaded, Decision on export likely soon. Arrival started in Gujarat. Crop loss in M.P.
- Recent rains beneficial to the wheat crop. Ban on wheat export continues despite surplus stock., ,
- Govt. intention to augment supply., Procurement target increased to 26MM
- Govt. intention to augment supply.
- Pressure to offload wheat on FCI, Minor damage report from Punjab and Rajasthan.
- Unfavorable weather condition in major growing regions. Short supply expected in the international market in medium term

Analysis: Technical

- Candlestick formation shows sellers support in the future market with weak bias likely to continue for next trading session.
- Prices continue to test towards its resistance with dwindling volume indicating lack of adequate buying strength to breach its crucial resistance region of INR 1220.
- Even 9 day and 18day SMA hints weakness in the market
- Indicators remain bearish .even fundamental is unsupportive.
- Wheat is likely to trade range bound with selling expected at higher levels.

Trade Recommendation: Wheat NCDEX (April)

Spot Market Fundamentals

- Arrivals from new crop started in Gujarat and are likely to go up to the level of 20 thousand bags per day in next two weeks. Huge old stock too is weighing on the market and prices are likely to come down near MSP level in two three weeks. Decision on export may come at the third week of March but it is not going to support market in big way.
- Prices are likely to be under pressure in weeks ahead due to rising arrival in Gujarat, excellent crop in other growing regions. India's Feb. 1 wheat stocks were at 19.4 million tons, substantially higher than a target of 8.2 million ton.
- However, next three -four weeks are very crucial for wheat crop in terms of estimating final production figure. If day temperature continues to rise, arrival for growing regions may start early. We need to keep close eye on weather development. Parts of northern India such as Uttar Pradesh, Haryana and Punjab resulted to strong boost to wheat crop as crop is currently reported in grain formation stage. Therefore anticipation of strong supplies in the near term might add some selling pressure.
- India's wheat planting until Feb. 4 rose 3% from a year earlier to a record, brightening prospects of a bumper crop. The wheat sowing area increased to 29.25 million hectares from 28.32 million hectares, the government data showed. India, the world's second-largest wheat grower, aims to produce 83.69 million tons of wheat in 2010-11, up 3.3% from the previous year
- Standing crop in Punjab, Haryana, U.P., Rajasthan, M.P. and Bihar is in excellent condition and lower temperature at night is considered to be favourable for better crop growth. However, concern over rising day temperature is still intact and it may have direct impact on final yield. India's wheat production is estimated to touch an all-time high of 81.47 million tons in 2010-11 crop year. If temperature goes up in day, market may see early arrival in major growing area.
- Punjab has storing capacity of 137.68 lakh tons of foodgrains including CWC and SWC. Just the same way Haryana has collective storage capacity is 46.6 lakh tons, Rajasthan has 27.81 lakh tons and U.P. has 70.83 lakh tons. Total capacity at all India level is 603 lakh tons.
- The present boom in wheat prices is likely to last till July when Northern Hemisphere new crop is harvested and new crop finds its way in the global markets. Plantings in several countries will be boosted by higher prices and global wheat acreage may rise 3.1% to around 224 million hectares in 2011, the London-based International Grains Council said in a report. Global wheat production may rise by 4% to 672 million tons .As for India timing is most crucial given the high price of domestic wheat. While parity at the current levels is achievable, margins will evaporate as the global wheat prices decline and the window of opportunity will vanish.

Prices are likely to trade in the range of Rs 1200 to Rs1300 in most of the cash markets depending on quality as well as regions specific conditions with steady to weak bias in near term. Gains are likely to be restricted in medium term due to price curbing policy and govt.'s intention to curb inflation and augment regular supply through open market and PDS Channels. Increased area has heightened the hope for bumper crop production once.
