

***Highlights of the week:***

- Mixed trend witnessed in pulses during the week.
- Significant sowing progress is witnessed in tur, moong and urad in southern parts of the country due to the revival of monsoon but sowing of Kharif pulses still lags behind the normal pattern in southern parts.
- Moong producing regions in Rajasthan received deficit to scanty rainfall during the last week but sowing conditions are satisfactory due to adequate pre monsoon rainfall which helped farmers in the timely sowing of the commodity.
- Last know import contracts for chana and yellow peas have been at \$650/ton and \$450-55/ton respectively for Oct-Nov 2011 and Sep-Oct 2011 shipments.
- C&F prices of urad and moong remained unchanged from the previous week while marginal improvement was witnessed in tur C&F but no forward contracts have been closed except in urad.
- Exportable surplus of chickpea is likely to be lower in Australia during 2011-12 but despite this, trade participants in Australia are expecting lower average prices (FOB) during 2011-12 compared to the last year.
- Exportable surplus of lentils is likely to remain same in Canada during 2011-12 but trade participants in Canada are expecting higher average prices during 2011-12 compared to the last year.

## Chickpeas (Chana)

### Market Recap:

Mixed trend witnessed in chana prices during the week ended July 13, 2011 as compared to the last week. Unwillingness of buyer's to pay higher prices for the commodity put a cap on rising chana prices but good demand of processed chana restricted a large downfall in the prices.

### Current Market Dynamics & Outlook:

Consistent improvement in chana prices during last couple of weeks encouraged farmers to bring their stock to the spot markets but since chana prices have improved by more than 6% during last three weeks and reached Rs 2775/qtl on July 7, 2011 and this has made buyers a little cautious leading to the marginal decline recorded in chana prices. But since demand for processed chana is good in retail markets and most of the stock is now held by the stockists, it is unlikely to be any major downfall in its prices in near term.

According to trade sources, some import contracts for Australian chickpea have been done at \$650/ton level for Oct-Nov 2011 shipments. Import contracts at such high levels reflects the chances of steep increase in chana prices in coming months as there is a huge difference of more than Rs 500/qtl in prevailing Australian chickpea prices (Australian chickpea @ Mumbai market is Rs 2500/qtl) and expected prices in Oct-Nov 2011 as per these import contracts. Since normal difference between spot chana prices (Delhi market) and Australian chickpea at Mumbai market stands at around Rs 75-100/qtl and this improvement in Australian chickpea prices will influence desi chana prices.

On the global front, acreage under chickpeas in Australia during 2011-12 is expected to lower to 3.03 lakh hectares but the expected better yields will compensate for the decline in area and output is likely to be marginally higher at 3.85 lakh tonnes. However in view of the good crop in India, exports from Australia will be lower during 2011-12 compared to

the last year. Projections of lower demand for Australian chickpea in international markets have reduced the expected average FOB price to \$518/ton during 2011-12 against last year's realized average FOB of \$530/ton.

### Market Outlook:

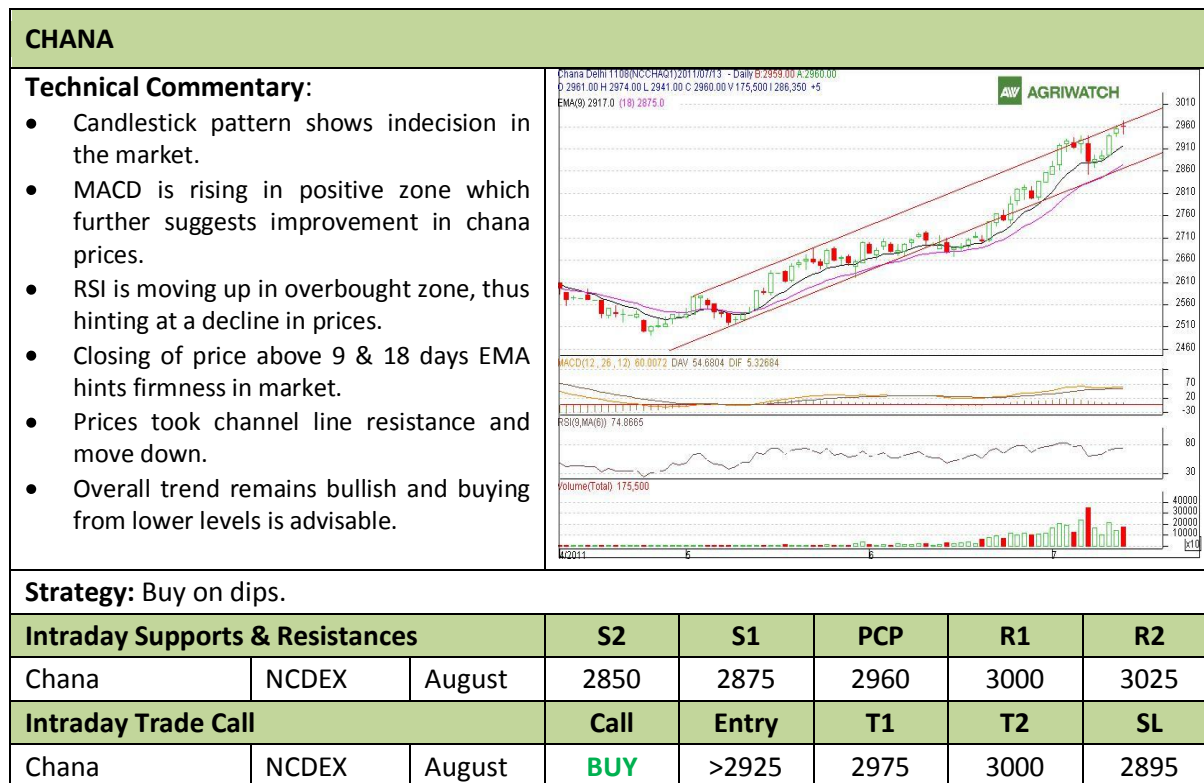

Chana prices are expected to remain range bound with firm bias in coming week on regular demand of the commodity.

### Price Outlook at Delhi (Chana MP):

Candlestick pattern shows buying interest in the market. Closing of prices above the 9 and 18 days moving average suggests firmness in the market. RSI is rising in overbought zone, hinting at possible decline in the days ahead. MACD is moving up in the positive zone which favours improvement in the prices.

### Peas (Matar)

#### Market Recap:

Mixed trend witnessed in both desi and imported peas during the week ending July 13, 2011 due to dull demand of the commodity at higher levels but fears of supply shortage in coming months restricted a major fall in peas prices.

#### Current Market Dynamics & Outlook:

Desi peas prices have increased by around 7.7% during last one month to Rs 2325/qtl due to the expected supply shortage in coming months which drove the peas prices higher besides higher parity of imported peas. Since peas desi peas prices have reached to season's highest level of Rs 2380/qtl on July 4, 2011 and buyers are cautious. But since the current 3-4 lakh tonnes peas stocks lying at various centers is not sufficient to fulfill the domestic demand till new crop, importers are optimistic that there would be some further improvement in peas prices and are entering into forward contracts for Sep-Oct 2011 shipments at around \$450-56/ton which is higher by around Rs 100-150/qtl compared to the

prevailing market prices. Forward contracts at higher levels are hinting at further increase in peas prices in near to medium term.

On the global front, Canada has further reduced exportable surplus of peas in its latest estimate compared to the previous estimate, due to less planting of the crop which will lower the production of the commodity. Due to the considerable decline in exportable surplus during 2011 compared to the previous year and previous estimate (June 2011), average prices are expected to jump significantly during the same period. Below mentioned table represents the estimates of export availability and average prices:

	Exports (000 tonnes)		Average Price (\$/ton)	
	July 2011 Estimate	June 2011 Estimate	July 2011 Estimate	June 2011 Estimate
2010-11	3000	2900	265	260
2011-12	1800	2000	275	265

### Market Outlook:

Peas prices are expected to trade range bound with slight firmness in near term due to the expected supply shortage and good demand of the commodity. Sharp decline by Canada for exportable surplus will support global peas prices, hence also influence domestic prices.

### Price Outlook for Desi Peas at Mumbai Market:

Peas prices have closed below previous week's closing. Closing of prices above 9 and 18 days moving average suggests firmness in the market. RSI is rising in overbought zone, hinting at decline in prices. MACD is also moving up which suggests improvement in prices. Prices might touch channel line resistance level in the coming week.

## Pigeon pea (Tur)

### Market Recap:

Mostly steady to firm sentiments witnessed in domestic and imported tur prices during the week ending July 13, 2011. Tur prices fell sharply during the beginning of the week due to the revival of monsoon in southern parts of the country but since sowing of the commodity is lagging behind normal schedule tur prices rose by the end of the week.

### Current Market Dynamics & Outlook:

Monsoon has further advanced in southern parts of the country but is still not sufficient for the sowing of the commodity. Due to the dry conditions in most of the key growing regions in southern parts of the country, sowing of the commodity is far behind the normal level and this is currently supporting domestic tur prices. However, trade participants are not expecting a major uptrend in tur prices in near term as sufficient carry-in stock of the commodity is expected during 2011-12. C&F quotes for Burmese tur also increased by \$20/ton to \$670/ton during the week compared to the last week due to the higher

domestic prices but no fresh contracts have been finalized during the week as importers are still finding disparity of around Rs 100-125/qtl.

The table below shows the percentage departure of rainfall in the key tur growing districts of Maharashtra, Karnataka, A.P. and M.P. as on July 06, 2011:

	% Departure as on 06- 07-2011	% Departure as on 29- 06-2011	Andhra Pradesh	% Departure as on 06- 07-2011	% Departure as on 29- 06-2011	Madhya Pradesh	% Departure as on 06- 07-2011	% Departure as on 29- 06-2011
<b>Maharashtra</b>								
Aurangabad	-56%	-86%	Prakasam	87%	-72%	Raisen	-37%	278%
Jalna	-45%	-60%	Anantpur	64%	28%	Betul	-97%	30%
Beed	111%	-56%	Kurnool	5%	-46%	Rewa	-51%	-42%
Latur	22%	-89%	Mahbubnagar	-25%	-17%	Sidhi	-62%	134%
Usmanabad	-24%	-76%	Rangareddy	-46%	-66%	Singroli	-57%	47%
Nanded	-50%	-81%	Nalgonda	38%	-61%	Satna	-68%	23%
Parbhani	-56%	-69%				Damoh	-45%	107%
Buldhana	-69%	-67%				Chindwara	-97%	4%
Akola	-71%	-43%	<b>Karnataka</b>					
Washim	-57%	-35%	Gulbarga	29%	-35%			
Amravati	-56%	-25%	Bijapur	126%	-85%			
Yavatmal	-12%	3%	Raichur	103%	-46%			
Wardha	-62%	17%	Yadgir	115%	-69%			
Nagpur	-64%	-46%	Bidar	45%	-94%			

Following table shows the crop progress during current year and corresponding period last year:

State	Current Year's Area	Area in same period last year	% Change
<b>Maharashtra (June 12)</b>	347906 ha	1006056 ha	-65.4%
<b>Karnataka (July 04)</b>	67000 ha	243000 ha	-72.4%
<b>Andhra Pradesh (July 06)</b>	92079 ha	190298 ha	-51.6%

Though monsoon has revived in the country, distribution of rainfall remains sluggish over key growing regions as only some parts of Maharashtra like Beed and Latur received good rainfall while most of the parts of Karnataka and Andhra Pradesh have received good rainfall. But since of the window for sowing of tur is closing, therefore any progress in monsoon after mid July will not compensate for the loss in area as farmers might increase the area of cotton and soybean on the expense of tur.

### Market Outlook:

Domestic Tur prices are expected to remain range bound and sideways during the coming week. Progress of monsoon during the 1<sup>st</sup> half of July over the key growing states will remain the key in deciding the price movement.

### Price Outlook for Tur at Gulbarga Market:

Candlestick pattern shows buying interest in the market. Closing of prices above 9 days moving average suggests firmness in the market. RSI is rising in neutral zone, supporting bullish sentiments. MACD is rising in negative zone which supports improvement in prices.

## Black Matpe (Urad)

### Market Recap:

Both desi and imported urad prices mostly featured a firm tone during the week ending July 13, 2011. There were no quotes for urad in Latur market during the week due to the non availability of the commodity. Urad prices fell down sharply in the beginning of the week due to the dull demand of the commodity at higher levels but since sowing of the commodity is far behind than the normal level , this had supported its prices to some extent.

### Current Market Dynamics & Outlook:

Deviation in monsoon is currently supporting domestic urad prices as key growing regions in southern parts of the country received deficit to scanty rainfall to date, due to which most of the urad area remains unseeded but unresponsive demand of the commodity is currently restricting major uptrend in urad prices. In addition to the dull demand, regular inflow of Burmese urad (around 134 containers have arrived at Nava Sheva port during last one week) in domestic markets is also adding to the supply side which is currently curbing urad prices in moving northwards direction.

C&F prices of Burmese urad remained unchanged at \$810-15/ton during the week as Indian importers see these levels as bottom levels and are expecting improvement in C&F levels in the days ahead and

due to this, international urad prices remained steady despite of the dull demand in international markets.

Prevailing weather conditions still remained challenging for cultivation of the commodity as majority of the key growing regions in southern parts of the country received deficit to scanty rainfall which has forced farmers to stay away from the fields. Below mentioned table represents the percentage departure of rainfall in the key districts of Maharashtra, Madhya Pradesh, Andhra Pradesh and Karnataka as on July 06, 2011:

<b>Maharashtra</b>	<b>% Departure as on 06-07- 2011</b>	<b>% Departure as on 29-06- 2011</b>	<b>Madhya Pradesh</b>	<b>% Departure as on 06-07- 2011</b>	<b>% Departure as on 29-06- 2011</b>
Jalgaon	-80%	-89%	Tikamgarh	99%	494%
Latur	22%	-89%	Chhatarpur	-27%	162%
Usmanabad	-24%	-76%	Satna	-68%	23%
Nanded	-50%	-81%	Vidisha	-3%	479%
Buldana	-69%	-67%	Shivpuri	-29%	400%
Washim	-57%	-35%	Ashoknagar	-1%	779%
<b>Karnataka</b>			<b>Andhra Pradesh</b>		
Mysore	-42%	5%	Medak	24%	-71%
Chamarajanagar	-12%	-23%	Nizamabad	15%	-79%
Hassan	-39%	-42%	Adilabad	1%	-29%
Dharwad	-45%	-5%			
Belgaum	-43%	4%			
Gulbarga	29%	-35%			

Following table shows the crop progress during current year and corresponding period last year:

<b>State</b>	<b>Current Year's Area</b>	<b>Area in same period last year</b>	<b>% Change</b>
<b>Maharashtra (June 12)</b>	86561 ha	384186 ha	-77.5
<b>Karnataka (July 04)</b>	30000 ha	66000 ha	-54.56
<b>Andhra Pradesh (July 06)</b>	16514 ha	51681 ha	-68.0

Since appropriate sowing period is departing in southern parts of the country and this might reduce the area in these regions. However, intensity and duration of rainfall in July 2011 will determine the actual deviation in area and hence decide the price direction in the days ahead.

### Market Outlook:

Urad prices are expected to trade range bound with firm bias in near term due to slow sowing progress in key growing regions of the country.

### Price Outlook for Burmese Urad at Mumbai Market:

Urad prices closed below previous week's closing level. Closing of prices below 9 and 18 days moving average suggests weakness in the market. RSI is moving down in neutral zone, supporting bearish sentiments. MACD is moving up in negative zone which hints at firmness in prices. Overall trend remains bullish and buying at lower levels is advisable.

### Lentils (Masoor)

#### Market Recap:

Mostly steady to weak sentiments recorded in most of the spot markets during the week ending July 13, 2011 on sluggish demand of the commodity. Dull demand of the commodity kept weighing on its prices but since masoor is currently trading at its lowest levels more reduction in prices is unlikely.

#### Current Market Dynamics & Outlook:

Sluggish demand for masoor from wholesalers and retailers keeps weighing on domestic masoor prices. Though arrivals have almost finished in domestic markets, dull demand is restricting any improvement in masoor prices. Quotes for imported lentils also remained stable at \$ 530/ton and reportedly no fresh contract have been done at the prevailing price due to the sufficient availability of desi masoor in domestic markets.

On the global front, acreage in Canada during 2011-12 under lentils is expected to decline by 20% to 11.33 lakh hectares compared to the last year and weather in the country still remained challenging for the growth of the crop. Due to the lower area and yield, output during 2011-12 is expected to fall to 14.25 lakh tonnes but with the help of adequate carry-in stocks, exportable surplus remain unchanged at 12 lakh tonnes as it was in the previous year. But despite of the same exportable surplus, expected average prices during 2011-12 is likely to jump by 13.2% to \$515/ton compared to the previous year.

Trade participants believe that, quality of last year's stock is inferior and since output of the commodity during 2011-12 is expected to fall by 26.8% compared to the last year, therefore availability of good quality lentils will remain tight in near term and due to this, average prices are expected to remain on the higher side compared to the last year.

### Market Outlook:

Desi masoor prices are expected to remain range bound with slight weakness in coming week on dull demand and reportedly sufficient stocks of imported masoor. Since international masoor prices are expected to increase in coming days but it will not have an impact on domestic prices due to the adequate availability of desi masoor in domestic markets.

### Price Outlook of Desi Masoor at Kanpur Market:

Masoor prices are trading range bound in the range of 2783-2877. Two consecutive closes either side of the mentioned range will give further direction to prices. Closing of prices below 9 and 18 days moving average suggests weakness in the market. RSI is moving down in neutral zone, supporting bearish sentiments. MACD is moving down in negative zone which hints at further weakness in prices.

## Green Gram (Moong)

### Market Recap:

Moong prices remained steady to weak in most of the markets during the week ending July 13, 2011. Slow sowing progress of moong in southern parts of the country initially supported moong prices but dull demand of the commodity kept weighing on its prices.

### Current Market Dynamics & Outlook:

Advancement of monsoon is the driving force behind fluctuations in moong prices as slow pace of sowing in southern parts of the country due to dry weather supported moong prices during June end-July beginning but revival of monsoon in India's largest moong producing region (Rajasthan) has currently put cap on rising moong prices. Moong growing regions of Rajasthan did not receive adequate rainfall during first week of July 2011 but overall distribution of rainfall is even over key moong producing regions in Rajasthan. This has motivated farmers for timely sowing of the commodity. Below mentioned table represents percentage departure of rainfall in the key districts of Maharashtra, Madhya Pradesh, Andhra Pradesh and Karnataka as on July 06, 2011:

<b>Maharashtra</b>	<b>% Departure as on 06-07- 2011</b>	<b>% Departure as on 29-06- 2011</b>	<b>Karnataka</b>	<b>% Departure as on 06-07- 2011</b>	<b>% Departure as on 29-06- 2011</b>

Nalgonda	38%	-61%	Jalore	-92%	-100%
Warrangal	123%	-60%	Jaipur	-74%	275%
Nizamabad	15%	-79%	Ajmer	-96%	265%

Following table shows the crop progress during current year and corresponding period last year:

State	Current Year's Area	Area in same period last year	% Change
<b>Maharashtra (June 12)</b>	114038 ha	484909 ha	- 76.5
<b>Karnataka (July 04)</b>	145000 ha	264000 ha	-45.1
<b>Andhra Pradesh (July 06)</b>	50514 ha	172141 ha	-70.7
<b>Rajasthan (July 08)</b>	344500 ha	146800 ha	+134.7

Since sowing of the commodity has not finished till date, therefore advancement of monsoon will play important role in deciding moong prices in near term as any deviation in monsoon in Rajasthan will reduce moong acreage and hence support moong prices.

International moong prices (C&F) at Indian ports remained unchanged at \$ 1200/ton and reportedly no fresh contracts have done at current levels.

### Market Outlook:

Moong prices are expected to remain range bound in near term. However, progress of monsoon will further provide direction to moong prices.

### Price Outlook for Desi Moong at Jaipur Market:

As evident from the chart a range bound and sideways movement featured in moong prices. Prices are trading in the range of 4000-4500 level and two consecutive closes either side of the mentioned range will give further direction to prices. Closing of prices below short term EMAs (9 and 18 days) suggests weakness in the market. Oscillator RSI is moving down in the neutral zone which hints at a weak trade. We expect moong prices to remain range bound in the coming week.
