

Cotton-Daily-Fundamental-Report

November 01st, 2011

Cotton Domestic Fundamentals:

Cotton prices steady to firm as exporters demand remained firm. Markets were also supported by as production estimates could go down below the forecast of 355 lakh bales. Meanwhile traders association Cotton Association of India has projected the cotton production to be 363 lakh bales. Markets were may weaken as arrivals are expected to increase in the coming week.

Cotton Domestic Futures Market:

NCDEX Kapas April 2012 contract finished weak against previous close price. The contract traded in the range of Rs. 735-744.7 per 20 kg during the session. Rise in open interest amidst falling prices suggest that the new money is coming through the short sellers and a downtrend is in place. Volume has not supported today's downtrend.

Cotton International Fundamentals

Cotton futures finished end marginally higher as market participants considered Europe's initiatives to tackle its regional debt crisis. The key December cotton contract on ICE Futures US added 0.05 cent to close at \$1.0437 per lb. China has restricted cotton imports preferred to buy from growers to keep them strong. Due to bad weather, production was down 9.9 in tonnes. Imports were limited as mills showed restricted consumption and the US consumption in 2011-12. Meanwhile, Brazil production shut up to 1.9 million tonnes from 1.2 million tonnes a couple of years back.

Outlook: Domestic and International

In the short term, domestic cotton prices move range bound to weak on higher production estimates, weak demand and fresh arrival expectations.

U.S markets may trade range bound to firm due concerns over U.S crop condition and Eurozone debt crisis may reduce demand of cotton.
