Highlights of the Month:

[\[Back to](#)
[Table to Content\]](#)

- Pulses prices mostly featured steady to firm tone during the December month.
- A rise of 7% in total pulses production in China during marketing year 2011-12 was estimated.
- The mung Beans production in China is expected to be higher by 3 per cent to 980,000 MT as compared to last year due to increased acreage amid expectations of good return to growers.
- Lentils production and area is estimated to remain unchanged at last year's level of 25000 MT and 50,000 hectares respectively. Kidney beans or Razma production is estimated at 750,000 MT down 21 per cent as compared to last year as farmers switched to corn from kidney bean due to higher return and to some extent to soybean and mung beans.
- Total beans and pulses exported from Burma rose by 39% to 64,104 MT in the month of November as compared to 46,277MT in same period during 2010. India , the largest buyer accounts for 42,348 MT followed by 12,049 MT exported to Singapore. The exports is favourable as currently Kyat depreciates against US dollar. Earlier, kyat is in upward trend against dollar till October. This may supports, export in coming days.
- As per the latest report of Agriculture and Agri-Food Canada (AAFC), 2011-12 dry peas production fell by 30% to 2.1 MMT as compared to last year and overall dry peas supply is projected to fall by 32% to 2.7 MMT.
- It also lowered the lentil production estimate by 21% to 1.5 MMT. However, overall lentil supply is expected to increase by 14% to a record 2.3 MMT on higher carry-in stocks.
- AAFC also projected US dry peas and lentil production on the lower side. and lentil production is estimated at 0.2 MMT down by 46% from last year.

Rabi 2011-12 Pulses sowing progress:-

Peas (Matar)

[\[Back to Table to Content\]](#)

Market Recap:

Steady to flat tone continue to witness in pea prices as on lackluster trading activity and dull demand.

Current Market Dynamics & Outlook:

Desi (local) peas average prices in Kanpur market surge marginally by Rs 60-80 per quintal to Rs 2960 per quintal as compared to last month's Rs. 2885/qrtl, while imported yellow pea of Canadian origin prices at Mumbai remained flat at Rs 2600 per quintal.

On rabi sowing front, this year area shifted from masoor and chana to peas in some area (UP,MP) leads to higher planted area under rabi season. This year, rise of 13.89% was noticed under the pea planted area in country.

On the International front, Dry peas production in USA expected at 0.25 MMT down by 60% as compared to last year.

In Canada, 2011-12 dry peas production fell by 30% to 2.1 MMT as compared to last year and overall dry peas supply is projected to fall by 32% to 2.7 MMT. The estimated exportable surplus in 2011-12 is fall by 30% in comparison of 3.01 MMT in previous year.

While in China, Dried pea production is expected at around 400,000 MT down 20 per cent year-on-year due to increasing cost of production, which is causing domestic processors to substitute more competitive price, imported dried peas.

On the import front, imports of Green pea of Canada origin remained unviable as C&F prices of peas remained steady at around \$495-485/ton at Mumbai during entire month while the prevailing domestic prices for pea at Mumbai were lower than the landed cost of pea at Mumbai. The difference remained stable in between Rs.80-100 per Qtl

Market Outlook:

Peas prices are expected to move range bound in days ahead on firm international fundamentals and depleting domestic stocks. While rise in rabi sown area may weighs on the prices.

Price Outlook for Canadian Yellow Peas at Mumbai Market:

- Candlestick pattern shows range bound movement in prices. Mostly prices are moving in between 2073 and 2103 levels.
- 2037 and 2200 levels seem strong support and resistance respectively for the prices in this season and breaching the level likely lead to bulls run for short term.
- Positioning of Oscillator RSI and momentum indicator MACD in chart remained sideways which depicts range bound movement in prices for short term.
- We expect prices likely to remain range bound.

Pigeon pea (Tur)

[\[Back to Table to Content\]](#)

Market Recap:

Both desi and imported tur witnessed steady to firm tone during the December month due to lower kharif crop arrivals.

Current Market Dynamics & Outlook:

Prices surged in all key markets during the period. The average prices of white tur in Jalna market rose by Rs.50 per Qtl to Rs.3714/Qtl from last month average of Rs.3364 per qtl while average prices remained stable between Rs.4000 to Rs.4100 per quintal in Latur.

While imported tur prices at key markets remain steady to firm in tandem with desi tur prices, remained above the last month's level. The lemon tur average prices remain at Rs.3230-3250 per qtl.

Nowadays, arrivals of only 3000-5000 bags (one bag = 100Kg) per day has been reported in comparison to the corresponding period last year when it was 10000-12000 bags per day. Vijayawada market also featured fresh crop arrivals of around 200-300 bags per day which is lower than the corresponding period last year's 1500-2000 bags per day.

The Karnataka State government announced MSP of Rs.4000 per quintal of tur. As centre fixed MSP of tur at Rs.3200 per quintal and paid incentive of Rs.500 per quintal, which leads to Rs.3700 per quintal and State government would also pay additional Rs.300 per quintal.

This year 30% of crop is destroyed in Karnataka as on adverse climatic conditions. Red gram is grown on around 7,52,909 ha which results into 3,38,959 tonnes of tur in 2011 kharif season against the 5 lakh tonnes in 2010.

On the import front, imports of tur (lemon variety) from Myanmar still remained unviable even after the fall in C&F to \$605/ton from the \$620/ton in previous month at Chennai market. During the entire month prevailing domestic prices were lower by Rs.200 per quintal than the landed cost of tur at Chennai.

Market Outlook:

We expect tur prices to remain firm in coming months on fresh buying interest amid lower crop output and depleting stocks domestically.

Price Outlook for Tur at Gulbarga Market:

- Candlestick pattern depicts range bound in prices. Prices taking support at 3800 levels to and 4100 level seem resistance on higher side and breaching the level likely keep the bulls run for short term.
- However, Positioning of RSI in chart depicts slight divergence with price movement and momentum indicator MACD also hints towards possible sideways movement in prices.
- Considering the technical indicators and oscillators along with fundamental factors , prices likely remain range bound with firm bias during the days ahead. Therefore, market participants are suggested to go for buying on dips.

Black Matpe (Urad)

[\[Back to Table to Content\]](#)

Market Recap:

Both desi and imported urad witnessed steady to weak tone in all key trading centers during the December month.

Current Market Dynamics & Outlook:

During the December month, desi as well as imported urad declined in all the key markets following subdued trading activity from millers/processors amid dull demand for processed urad (dal).

The average prices of urad in M.P. and Maharashtra tumbled by Rs.150-180 per quintal. The average prices in Jalgaon, saw a fall of Rs.150-180 per quintal to Rs.3493 from 3665 per quintal in November month. Moreover, fall to 4070 per qtl from the last month Rs.4160 per quintal also featured in Vijayawada market.

In line with declining prices for desi urad, imported urad prices also eased in the key markets. In Chennai, prices declined by Rs200-270 per quintal to Rs.3453 per quintal from the Rs 3697 per quintal in November month.

Further, the below average quality arrivals in the markets fetching at discount also added to the week tone.

This year urad planting is well ahead previous year's sown area. The total planted area under rabi urad in India surge by 16.73% to 8.72 lakh ha. from 7.47 lakh ha. in same period during last year. Moreover, much-needed recent rains over AP remained supportive for the planting.

On the import front, imports of urad from Myanmar remained unviable for most of the month due to high dollar rate. Meanwhile, slight downfall of Rs.50-60 per quintal in domestic prices at Chennai port also makes the landed cost of urad slightly costlier.

Internationally, old urad stocks are lying in Myanmar and as per the source the current crop prospects is also very promising for urad crop, which may also keep international prices on softer side which in turn also limit the gains in domestic urad prices.

Market Outlook:

Urad prices are likely to remain firm in next month based on the expected demand for good quality urad from millers and stockiest amid lower stock availability.

Price Outlook for Burmese Urad at Mumbai Market:

- Candlestick formation hints towards selling interest in market. However, pattern shows range bound movement in prices
- 3270 levels seem immediate resistance and 3113 level as immediate support.
- Positioning of RSI in chart also depicts bearish movement.
- We expect that Prices might remain range bound with weak movement in short to medium term.

Green Gram (Moong)
[\[Back to Table to Content\]](#)
Market Recap:

Both desi and imported moong prices witnessed steady to weak tone during the December Month on high fresh crop arrivals.

Current Market Dynamics & Outlook:

During this period, imported moong at Mumbai featured a sharp fall in average prices by Rs.175-200 per Qtl to Rs.3362/Qtl from last month's Rs. 3565/Qtl on dull demand in domestic markets.

Meanwhile, desi moong prices in Jaipur market also tumbled by Rs.150-160 per quintal to Rs.3800 per quintal. However, moong (Chamki variety) at Indore surge to Rs.4412 per quintal from the last month Rs.4250-4300 per quintal.

Meanwhile, Rajasthan state agriculture department in their second advance estimate of Kharif 2011 crops has revised up the moong production estimate to 571,230 tonnes from the first advance estimate of 436,935 tonnes. The main reason for increase in production is increase in area (sown area) estimation.

The rabi season planted crop is reportedly in satisfactory condition with no report of any pest in disease in the standing crop. However, rains/irrigation at the moment would help the crop for better productivity.

On the import front, this month the quotes of moong Annaseva Burmese fell by USD 30 per MT. The table below shows the parity/disparity of moong –

Moong Annaseva -Burma Origin	In December	In November
Average C&F Prices (in \$/MT)	760	791
INR	39520	40736.5
Expenses (loading/unloading/clearing etc) at port	1500	1500
Total Landed Cost (Rs/MT)	41020	42236.5
Domestic Price at Mumbai (Rs/MT)	33620	35600
Parity/Disparity (Rs/MT)	-7400	-6636.5

As evident from the above table, there is a huge disparity in Moong Annaseva -Burma Origin at Mumbai (disparity of Rs.7400 per MT). It also indicates that if the dollar continues to remain firm then Indian imports of Moong Annaseva will go down which would lead to lower supplies in Indian leading to rise in the moong prices domestically.

Market Outlook:

We expect moong prices would remain range bound in days ahead as on high arrivals in key center amid the huge proportion of arrivals are below average.

Price Outlook for Desi Moong at Jaipur Market:

- Currently prices are moving in between the 3612 and 3909 levels and the level 3794 is acting as key support and resistance level.
- Positioning of RSI in chart is sideways indicates range bound with firm bias movement in prices.
- We expect moong prices to remain range bound with firm bias in day ahead.

Lentils (Masoor)

[\[Back to Table of Content\]](#)

Market Recap:

Lentil prices featured a firm tone during the December month as on fresh buying interest at lower levels.

Current Scenario:

During the period, average desi (local) masoor prices in Kanpur rose by Rs. 80-100 per qtl to Rs.2960 per qtl from last month's Rs. 2885 per qtl on dull buying activity while prices for UP and MP origin masoor at Delhi market also surge by Rs. 90-110/Qtl on fresh buying.

However, Canadian red lentils at Mumbai market remained flat at Rs.2660-2680 per quintal in this month as in the previous month.

Marginal fall of 0.51% is recorded in sown area this Rabi 2011-12 (i.e. 15.32 lakh ha. from 15.4 lakh ha. in previous year) and reportedly lower stocks in the markets supported the sentiment. Also improved tone in Tur or Arhar further lends support to masoor prices as it substitutes tur in southern states.

Meanwhile, as per the preliminary estimates received by the trade overall masoor output this rabi is expected to decline to 7.5-8 lakh tonnes down from the previous year's 10 lakh tonnes. Overall prices are expected to remain firm in coming days.

Given the lower tur supply this year, the demand for the substitute (Masoor) is likely to improve mainly for imports, which may result into higher international prices moving forward despite comfortable supply situation internationally. On the international crop front, higher export surplus, from Canada and Australia weighs on the rise in price movement.

On the import front, imports of Red lentils from Canada remained unviable even after the fall of in C&F prices reported during the month. The disparity is mainly due to continuous depreciation of the rupee against USD even after the dull demand at domestic markets. Expectation of improved sowing activity in rabi season also kept domestic lentils prices mostly on softer note.

Masoor at Mumbai	In December	In November
Average C&F Prices (in \$/MT)	530	560
INR	27560	28560
Expenses (loading/unloading/clearing etc) at port	1500	1500
Total Landed Cost (Rs/MT)	29060	30060
Domestic Price at Mumbai (Rs/MT)	26610	26820
Parity/Disparity (Rs/MT)	-2450	-3240

As evident from the the table, disparity in imports during December month still remain on higher side(Rs.2450 per ton).

Market Outlook:

Masoor prices are likely to remain range bound in coming days as on strong international fundamentals. Masoor prices are like to follow the price trend of tur prices.

Price Outlook of Desi Masoor at Kanpur Market:

- Candlestick pattern shows indecision in markets.
- Moreover, Divergence between MACD with price and RSI also hints towards indecision in markets.
- However, buying at lower level is advisable and we expect prices to remain range bound with slight firmness in coming period.

Chickpeas (Chana)

[\[Back to Table to Content\]](#)

Market Recap:

Chana prices witnessed weak tone during the December month as compared to the previous month on sporadic demand and thin trading activity.

Current Scenario:

Chana prices in all the markets mostly featured a fall on dull demand while later days in month buying at month bottom may support the prices. The monthly average chana prices in the benchmark Delhi market "Lawrence Road" fell by 5-6% to Rs.3372 per quintal from Rs.3550 per quintal in last month. While, Chana prices at Bikaner market fell to Rs.3091 per quintal in comparison to Rs.3362 per quintal in previous month.

However, imported Australian chana remained flat at Rs.3346-3366 per quintal in Mumbai market.

Lower sown area under chana this Rabi 2011-12 further supported the sentiment to some extent. As per the latest crop progress report of ministry of agriculture, as of Jan. 6th, sown area under chana is down by 4.34 per cent to 88.90 lakh hectares as compared to same period last year's sown area (92.94 lakh hectares). Shifting of chana acreage to peas in Uttar Pradesh and to Wheat in Rajasthan besides lower sown area in key southern states (Karnataka, Maharashtra, AP etc).

On crop condition front, Chana crop is in good shape in MP, UP and Rajasthan and in the vegetative to early flowering stage. Weather looks congenial as of now and recent precipitation over some parts of MP along with western UP and eastern Rajasthan may add to the soil moisture which brighten the yield prospect.

On the International front, lower exportable surplus in Australia and Canada may also support the prices.

Market Outlook:

Fresh buying support at current level may support the chana prices in days ahead along with the expectation of lower yield in southern part of the country.

Spot Market Price Outlook at Delhi (Chana MP):

- Candlestick chart pattern shows indecision in the market.
- Oscillator RSI remains in the neutral zone and favours a sideways market.
- Prices are likely to remain in between the 3300 and 3500 levels.
- We expect prices to remain strong in near term.

BUY	Above 3301	3420	3465	3239

Futures Technical (NCDEX):

- Any close above 3223.00 in monthly chart shall change the sentiments and might bring the prices in bullish phase.
- Expected price band for next week is 3180.00-3040.00 level in medium term. Prices are likely to trade with a high volatility in near term.
- Chana traded with a weak bias during the month. We expect prices are likely to remain weak in days ahead.
- We recommend investors to go short in NCDEX (Feb contract) at 3170-3180 for a target of 3080.00 and then 3040.00 with a stop loss at 3223.00 on closing basis.
