Yield Expectation 2013 -14

India moong yield is projected at 404 kg/Ha in the current season as per government estimates compared to 494 kg/Ha during the previous year. Yield of the crop is likely to be affected amid lack of favourable weather during harvesting season in the growing regions. According to first advance estimates released by the government, moong production is estimated at 0.90 million metric tonnes in 2013 -14 compared to 0.76 million metric tonnes during the previous season. Arrivals are lower in various mandis amid rainfall in the growing regions. According to trade estimates, the crop is likely to be 10% damaged and production will be around 0.7 million metric tonnes in the current season.
