Highlight

- Pulses witnessed weak tone on comfortable stock position, continuous imports and good rabi crop prospects.
- The Canadian Grain Commission (CGC) revealed that 85,900 metric tons (MT) of field pea were exported in December. The data does not include exports from non-exporting terminals. This season total exports equaled to 775,500 MT since the August start of the current marketing year, versus 1,027,800 MT during the same period last season. The 2011-12 marketing year finished with 1,605,800 MT of peas have been exported through terminals reporting to the CGC, versus 2,461,100 MT the previous season. Agriculture Canada states that lentil area is expected to drop for the fourth consecutive year "due to lower returns in 2012-13, particularly for large green lentil types, compared to other crops. As a result, production is forecast to fall sharply. However, the decrease in supply will be dampened by burdensome carry-in stocks which will partly offset the lower production. Meanwhile, the area seeded under chana crop is forecast to fall from 2012-13 because of higher carry-in stocks and continuing decline in prices from the records set in 2011-12. As a result, production is expected to fall to 120,000 MT.
- USDA seeks purchase tender for 14720 MT of pulses for shipment in March and first half of April as food aid.
- International lentil markets remained weak on arrivals pressure of new crop. Meanwhile, market participants are expecting lower sown area in upcoming season as of thin buying interest.
- International field pea market remained firm. The green pea markets are at record levels and prices reached to USD 570 per MT.

Weekly Outlook: - Flat movement likely to be witnessed on comfortable stock and in expectation of good rabi crop in field.
