1 bag = 75kgs

Higher arrivals were reported in Nizamabad and Erode market during the month period. Turmeric fresh crop arrivals start from March next year.

The area under turmeric cultivation is lower due to scant rainfall during the current year and a shift in acreage to other crops. But higher carry-forward stocks are expected to keep supplies firm. Turmeric production stood at a record high of 10.62 lakh tonnes in 2011-12 compared with 9.93 lakh tonnes in 2010-2011 and 7.93 lakh tonnes in 2009-10. Total production of turmeric in India in 2012-13 is expected to be around 50-60 percent lower compared to last year.

Local market remained mixed as key growing regions are reporting shortfall in production and insufficient monsoon rains is adding to farmer's woe.

Stockists are the main buyers and market movers. Some internal demand is also reported which supported the positive sentiments. Improved demand from north India and expectations of lower output due to lesser area under cultivation. However, huge number of warehoused stocks may pressurize the prices at higher levels.
