

Pulses Domestic Fundamentals:

- Government of MP has imposed the stock limit on Pulses, seeing the drastically higher prices of the commodity. The stock holders in the region having the population of three to ten lakh cannot hold the pulses more than two thousand quintal, whereas the limit for the region having the population of less than three lakhs is five hundred quintal.
- Tur crop in Gulbarga needs one winter rains in next 10 to 15 days for better yield and flowering. Currently, standing crop has entered into flowering stage and the process would continue two to three weeks from now. One good shower of rains may increase numbers of flowers and it would enhance yield. However, farmers express fear of lower yield if rains get delayed by a fortnight. Such condition may reduce expected yield by half. Actually, winter rains in between third and fourth week of Oct remains crucial for the final size of the tur crop.
- Like Gulbarga now tur crop needs immediate showers of rains in Latur and Jalgaon too. The standing crop is in dire need of rains .If rains in these regions get delayed, yield may drop by 30 to 40 percent. In these regions crop is in flowering stage. Yield prospects are deteriorating day by day in absence of rains.
- According to IBIS (provisional data), import of pulses in the last week (05 Oct-11Oct) was around 58 Thousand tonnes at major ports in India, around 21% lower than previous week's (28 Sept-04Oct), import of 72 Thousand tonnes. Chana, Kidney Bean, Green Pea, Urad and Moong were imported higher this week whereas Masoor, Cow Pea, Pigeon Pea and Yellow Pea were imported lower as compared to last week.
- The Wholesale price index for Pulses for the month of September, 2015 rose to 333.8 from 326 in previous month. The Pulses annual rate of inflation based on monthly WPI, stood at 2.39% for September 2015 as compared to 2.58% in the previous month.
- Area under Kharif pulses in Andhra Pradesh stood 3.28 Lakh Hectares as on 14 October this year, around 69% higher as compared to the area of 1.94 Lakh hectaressown during corresponding period last year. The area of Red Gram and Green gram has shown the highest increase as compared to last year.
- With the rise of festive demand and decreased pace of arrival from local market and import , the prices of urad continued to lend support in the cash market and resultantly prices firmed up. According to the preliminary advance estimate released by Agriwatch, urad Kharif production is likely to be around 10.7 Lakh tonnes which is around 22 percent lower than the 1st advance estimate release by Government of India of 13.7 Lakh tonnes.
- Area under Kharif pulses throughout the country stood 112.42 Lakh hectares as on 18 September this year, around 12% higher when compared to the area sown during corresponding period last year which was 100.72 lakh hectares, according to Ministry of Agriculture.
- According to the first advance estimate 2015-16 by Ministry of Agriculture, pulses Kharif production is estimated to be 5.56 MMT which is around 1% lower than the fourth estimate of 2014-15 that was 5.63 MMT. Tur production is estimated to decline to 2.61 MMT as compare to 2.71 MMT (4th estimate 2014-15) but Urad production is estimated to increase to 1.37 MMT from 1.27 MMT.
