

Pulses Domestic Fundamentals:

- According to IBIS (provisional data), import of pulses in the week (19 Oct-25 Oct) was around 39 Thousand tonnes at major ports in India, around 68% lower than previous week's (12 Oct-18 Oct) import of 123 Thousand tonnes. Pulses were imported lower due to government decision to impose stock limit on pulses importers.
- Farmers in Bihar is waiting for good showers of rain and if rain comes next 1 week it will boost up chana area by 15-20 % from last year .If rain doesn't occur in 7 to 10 days it may affect chana area by 20-30 % from last year. So occurrence of rain remains very crucial for chana area in Bihar.
- According to local media sources, Government of Tamil Nadu has imposed stock limit on pulses to curb down the rising prices. Municipal corporation (big city) wholesalers can stock maximum 250 tonnes of pulses whereas retailers 6.25 tonnes, municipal council (small city) wholesalers 150 tonnes and retailers 5 tonnes respectively.
- According to the Ministry of Agriculture, area under Rabi pulses throughout the country stood 20.65 lakh hectares as on 30th October this year, around 3% lower when compared to the area sown during corresponding period last year which was 21.31 lakh hectares. Despite higher domestic prices, the decrease in area is due to lower rainfall.
- Government has asked procurement agencies like Food Corporation of India (FCI), Small Farmers' Agribusiness Consortium (SFAC) and farmers' cooperative Nafed to procure one Lakh tonne of pulses mainly Urad ,Arhar and Chana from the farmers from November 1 at MSP, but the prices of pulses in domestic market are hovering unexpectedly higher than MSP. Hence the target set by government is unlikely to meet under current market condition. Farmers may retain their stock in anticipation of higher prices in the months ahead. Only needy farmers would sell pulses and they would prefer to sell it at higher prices from private trades in smaller quantity.
- In an attempt to keep the prices of pulses at reasonable rates, states continue to apply various enforcement measures for checking hoarding of pulses and distributing pulses at lower rates. According to reports from states, price of tur dal for retail distribution has been fixed at Rs 140 a kg in Gujarat, Rs 120-140 in Chhattisgarh, Rs 145 in Uttarakhand, Andhra Pradesh and Telangana providing subsidized tur dal through PDS at Rs 50 while Tamil Nadu is selling urad and Canadian lentils at Rs 30.
- According to Agriwatch telephonic survey to farmers in Madhya Pradesh, tur yield may decrease by 40-50 percent this year as compare to last year due to lower rainfall. As Madhya Pradesh is one of the major producing state of tur, if the yield lowered by 40 to 50 percent then the prices may not show steep decline in the coming arrival season.
- According to the local trader, Chana sowing started in Ganj Basoda region of Madhya Pradesh but this year chana area may decrease as compare to last year due to less rainfall received. Farmers in the region which have facility of water supply still tend to sow wheat as it is less prone to pest and frost attack as compare to chana.
- In a bid to check rising prices government has imposed stock limit on pulses held by importers, exporters, licensed food processors and large departmental retailers which were exempted earlier. The stock limit on pulses is extended to September, 2016.
- Government of MP has imposed the stock limit on Pulses, seeing the drastically higher prices of the commodity. The stockist in the region having the population of three to ten lakh cannot hold the pulses more than four thousand quintal, whereas the limit for the region having the population of less than three lakhs is five hundred quintal.
- Tur crop in Gulbarga needs one winter rains in next 10 to 15 days for better yield and flowering. Currently, standing crop has entered into flowering stage and the process would continue two to three weeks from now. One good shower of rains may increase numbers of flowers and it would enhance yield. However, farmers express fear of lower yield if rains get delayed by a fortnight. Such condition may reduce expected yield by half. Actually, winter rains in between third and fourth week of Oct remains crucial for the final size of the tur crop.

Pulses International Fundamental:

- **According to the trade sources, Burmese Tur crop is in good condition** and they are estimating around 4 Lakh MT productions this year. Harvesting of tur in Burma generally begins in December and export shipments start from January.
- **In a view to keep the prices stable, Trading Corporation of Pakistan** has issued two tenders to import 10,000 tonnes of Chickpeas. The tender for import of 5,000 each tons will be opened on 5th and 16th November respectively. Additional demand from Pakistan is expected to push up chickpeas prices in the international market.
- **According to the Union Nationale Interprofessionnelle des Plantes Riches en Proteines (UNIP)**, French Pea exports in the month of August was 37285 MT which is around 9% higher than the month of July that was 34130 MT. The increase in exports is due to good demand of pea from India which imported 23,261 MT of peas in August month.
- **According to the stat pub, Canada Lentil Production for 2015-16 is expected to increase by 5 percent** to 2.083 MMT. Canada had produced 1.987 MMT last year. Despite hope for higher production export volume is likely to decrease from 2.229 to 2.0 MMT in 2015-16. Canada growers predict the price range for all lentils in between \$750-\$780 in 2015-16 due to better prospects of export demand. Lentil prices were ruling \$585 (average) per tonne in the last season. As prices are expected to rule higher, local sellers and stockists, even farmers would prefer to retain stock for garnering maximum profit and it may slow down the current pace of export volume.
- **According to the statpub, Canada Lentil No. 1 variety harvest** could increase from 5% (last year) to 12 % this year and No.2 variety from 32% to 59% this year whereas No.3 and sample grade decreased from 53% and 10% to 27% and 2% respectively. Canadian lentil No. 2 variety is the FAQ (fair average quality) variety.
- **According to the latest ABARES report, Australian Chickpea production forecast 2015-16** is 990 kilo tonnes which are around 78% greater than 2014-15 estimate which was 555 kilo tonnes. Australian chickpea harvesting starts from mid September and crops start hitting India market from October onwards.
