

CARDAMOM

Fundamentals

Today's Update:

- Steady to weak sentiment was witnessed in Cardamom spot markets on Monday.
- Idukki district has experienced a significant 74% decrease in monsoon rainfall, leading to concerns about a decline in production within the farming sector, particularly in cardamom cultivation. This unfavorable situation increases the risk of pest infestations, which could further lead to quality deterioration. In April and May, there were some summer rains, resulting in the growth of fresh beans in the cardamom plants. Unfortunately, the subsequent month suffered from extreme heat and insufficient rainfall, causing the beans to wither. If these weather conditions persist, there is a high probability of production losses, resulting in a potential increase in prices.

Previous Update:

- In Cardamom growing regions in Kerala last year picking activity finished and current year season will start from July due to which supply are expected to be down in the market which are likely to support the prices.
- As per initial report AgriWatch estimates India's production for the marketing year 2022-23 is expected to be around 30,000 metric tonne (MT). Last year it was 27,000 MT.

Small Cardamom Spot Market Prices (Loose): (Rs/Kg)					
State	Auction Price		03-Jul-23	01-Jul-23	Change
