Cotton-Daily-Fundamental-Report

20th February 2014

Domestic Fundamentals:

Market Outlook: Cotton market noticed mixed tone in domestic market on Wednesday.

Prices of cotton are moving sideways, as fresh demand of yarn has been reported.

Arrival stood lower at 193000 bales today compared to 197000 bales on Tuesday.

In The News: India has become one of the top GM crop growers all around world. Plantation of BT cotton, the only approved GM crop for cultivation in India, has made nation the fourth largest genetically modified crop grower in the world. It should be noted that area under cultivation BT cotton stood 11 million hectares, where as total area under cotton cultivation this season stood 11.4 million hectares, according to Ministry of Agriculture. Currently USA has largest area under GM crops followed by Brazil, Argentina and India.

India is noticing demand for cotton from overseas markets majorly from China due to its superior quality. Corser cotton particularly is in demand.

Cotton association of India (CAI) estimated the cotton production lower at 374 lakh bales (of 170 kg each) this season (2013-14), which was earlier estimated in December to be at 376 lakh bales. Production of cotton during season 2012-13 was 356.75 lakh bales, lower than the current year. Though area stood lower this year due to high cultivation cost, production prospects are higher due to the boosted yield and cultivation of BT cotton.

Weather has improved in most of the cotton growing region, leading to harvesting and so the arrivals.

Area under the cotton cultivation, according to ministry of agriculture stood 114.67 lakh hectares this season (2013-14), compared to 117.29 lakh hectares last season.

Production as per the estimates of Department of Agriculture and cooperation (DAC) would be around 353 lakh bales (of 170 kg each), compared to 340 lakh bales last year.

Yield of cotton though initially gained significantly, but it is likely to decline during the consequences in later stages.

Export according to USDA estimates, are likely to be around 96.05 lakh bales this season (2013-14), versus 101.43 last season.

Import as per the USDA estimates, would be around 14.05 lakh bales this season, compared to 14.59 lakh bales previous season.

International Fundamentals:

- World cotton export would be on lower side as China is about to offload the existing inventories and not intended to import; besides it has restricted the import by imposing import quotas.
- **World production**, according to the USDA february'14 estimates, is likely to be around 25.402 million tones during this season (2013-14), whereas it was 26.796 million tones previous season.

Outlook

We expect domestic prices to remain sideways to weak, as demand is expected to be sluggish.
