

07th April 2014

Domestic Fundamentals:

Market Outlook: Cotton market noticed mostly steady tone on Saturday. Prices of cotton are moving flat amid concerns of weak world demand and exports. Arrival stood lower at 124000 bales today as compared to 127000 bales on Friday.

In The News: Besides the china policy of buying cotton, factor that could negatively impact the prices of cotton is the price competitiveness of polyester. During 2013-14, average of Cotlook A index stood 90 cents per pound, whereas it remained about 97 cents per pound in March 14, which is clearly showing a uptrend in prices of cotton. On other hand side polyester has been averaged at 73 cents per pound in China during 2013-14 and in March it dropped down to 66 cents making average of 70 cents per pound.

As per the latest estimates by ICF (Indian Cotton Federation), cotton production in India would be around in 37.6 million bales (each of 170 kg.) in season 2013-14, which was estimated to be around 36.1 million bales in January.

Department of Agriculture in Karnataka has banned the sale of Bt cotton seeds produced by Maharashtra Hybrid Company (Mahyco) on supply of substandard quality of seeds.

Area under the cotton cultivation, according to ministry of agriculture stood 114.67 lakh hectares this season (2013-14), compared to 117.29 lakh hectares last season.

Production as per the estimates of Department of Agriculture and cooperation (DAC) would be around 353 lakh bales (of 170 kg each), compared to 340 lakh bales last year.

Yield of cotton though initially gained significantly, but it is likely to decline during the consequences in later stages.

Export according to USDA estimates, are likely to be around 96.05 lakh bales this season (2013-14), versus 101.43 last season.

Import as per the USDA estimates, would be around 14.05 lakh bales this season, compared to 14.59 lakh bales previous season.

International Fundamentals:

- Cotton production in China could fall by 10% on Y-o-Y basis in 2014-15 over the concerns of ending of Chinese policy of buying and storing cotton by government.
- Cotton sowing in Uzbekistan, one of the top cotton producers in the world is likely to be delayed by about two weeks to end of April this year, as predicted by USDA.
- Global cotton ending stock, according to International Cotton Advisory Committee (ICAC) is likely to be around 21.04 million tons in 2014-15, nearly 5% higher of the ending stock expected in 2013-14, which would be around 20.04 million tons as reported by ICAC.
- USA is expected to see increase in acreage of upland cotton by 7% this season to 11.1 million acres. Last year area under cultivation of upland was 10.9 million acres. At the same time acreage of Pima cotton is likely to decline to 158000 acres, facing a fall of 21% on year on year basis.

<u>Outlook</u>

We expect domestic prices to remain weak with range bound movement.
