11th April 2014

Domestic Fundamentals:

Market Outlook: Cotton market noticed mostly mixed tone on Wednesday.

Prices of cotton are fluctuating in range amid weak sentiments and sluggish trading activities.

Arrival stood higher today at 110,000 bales compared to 94,000 bales on Tuesday.

In The News: Area under cotton cultivation is likely to increase to 11.8 million hectares in season 2014-15 from 11.7 million hectares in season 2013-14, as per the USDA latest estimates.

On lower production prospects, exports of cotton from India during 2014-15 could fall to 7.7 million bales from 10 million bales expected in 2013-14, noticing a decline of 23% as reported by USDA. In coming season India is likely to produce 36 million bales against 37.2 million bales in current season.

Besides the china policy of buying cotton, factor that could negatively impact the prices of cotton is the price competitiveness of polyester. During 2013-14, average of Cotlook A index stood 90 cents per pound, whereas it remained about 97 cents per pound in March 14, which is clearly showing a uptrend in prices of cotton. On other hand side polyester has been averaged at 73 cents per pound in China during 2013-14 and in March it dropped down to 66 cents making average of 70 cents per pound.

As per the latest estimates by ICF (Indian Cotton Federation), cotton production in India would be around in 37.6 million bales (each of 170 kg.) in season 2013-14, which was estimated to be around 36.1 million bales in January.

A suggestion of moderate increase of 1-5% in MSP has been proposed by Commission of Agriculture Costs and Practices (CACP) for the agriculture commodities of Kharif crop season 2014-15. This recommendation has been forwarded to the Ministry of Agriculture, where final decision would be made by the new cabinet after the elections.

International Fundamentals:

- Cotton production in China could fall by 10% on Y-o-Y basis in 2014-15 over the concerns of ending of Chinese policy of buying and storing cotton by government.
- Cotton sowing in Uzbekistan, one of the top cotton producers in the world is likely to be delayed by about two weeks to end of April this year, as predicted by USDA.
- Global cotton ending stock, according to International Cotton Advisory Committee (ICAC) is likely to be around 21.04 million tons in 2014-15, nearly 5% higher of the ending stock expected in 2013-14, which would be around 20.04 million tons as reported by ICAC.
- USA is expected to see increase in acreage of upland cotton by 7% this season to 11.1 million acres. Last year area under cultivation of upland was 10.9 million acres. At the same time acreage of Pima cotton is likely to decline to 158000 acres, facing a fall of 21% on year on year basis.

Outlook

We expect domestic prices to remain weak with range bound movement.
