

Domestic Fundamentals:

Market Outlook: Cotton market was steady Friday as there was little arrival and sluggish demand.

In The News: Cotton sowing in north India is running in final phase. According to the farmers almost 90-95% of cotton sowing has been completed. It should be noted that farmers are moving towards cotton from other crops like Guar.

The consumption in India increased to 4.8 million tons in 2012/13, witnessing a growth of 12% due to revision of Chinese cotton policy and it's expected to grow by 7% to 5.4 million tons in 2014/15. India cotton export is forecasted to fall to level of 1.1 million tons in 2014/15, noticing a decline of 21%.

MSP of Kharif crop 2014-15, including cotton would be announced on June 15. A moderate hike of Rs. 50 per quintal in MSP of cotton is reportedly suggested by Agriculture Commission.

India now holds the second rank in global textiles export, beating its competitors like Italy, Germany and Bangladesh, as per the recent data released by UN Comtrade. China is the leading global textile and apparel exporter followed by India, whose share stood 17.5% in year 2013 in world export of textile.

Cotton Corporation of India (CCI) held e-auction today (02 June, 2014) to sell 4600 bales of cotton from the 2013-14 crop at various branches.

According to the farmers, cotton acreage is likely to increase this year as cotton fetches better remuneration than others crops like Paddy and Oilseeds. Besides this, due to availability of improved varieties, cotton cultivation is less associated with weed and pest attacks and it is less labour intensive. Also the threats of El Nino is also doing favors for cotton, as the fibre crop requires the lesser water than paddy and other Kharif crops. The property of cotton to loosen the soil and make it suitable for other crops is also a reason encouraging farmers to grow cotton instead of paddy, which leaves adverse impact on soil.

India is expected to become largest producer of cotton by 2022, says "The Agricultural Outlook, 2013-2022". As per this recently release report, production of cotton in China is likely to decline by 17% whereas India will increase its production by 25%.

According to the third advance estimate released by Ministry of Agriculture, cotton output would be around 36.50 million bales (of 170 kg each) in the current season compared to 34.22 million bales previous season.

International Fundamentals:

World cotton trade is expected to notice timid sentiments in coming season. The volume of cotton traded worldwide is expected to decline to 8.1 million tons, noticing a fall of 8%, said International cotton advisory committee (ICAC). Reason for the same is fall in shipment to China which was 5.3 million tons in 2011/12 and expected 2.1 million tons in 2014/15. World consumption on other hand is projected to increase by 3% to 24.2 million tons in 2014/15.

As per the weekly crop data released by USDA on June 01, 2014, 74% of the cotton planting has been completed in USA (15 Major states), a week earlier it was 62%. The planting this year is little lower than the previous year during the corresponding period, which stood 79%. The five year average is 81%, which is far higher than the current planting pace in USA.

Global cotton inventory is expected to surge to the level of 21 million tones by the end of crop season 2014-15, said International cotton advisory committee (ICAC).According to the committee global trade is likely to decline sharply on lower demand from China.

Outlook

We expect domestic prices to remain steady to firm in near term.
