

### Domestic Fundamentals:

**Market Outlook:** Cotton market noticed mixed tone on Friday.

**In The News:** Threat of lesser rain this year due to El Nino is prompting farmers to grow more hybrid seeds, which need lesser water and gives better yield.

According to WASDE (June Report), World Cotton Supply and Demand 2014/15 Proj. (in Million 480-Pound Bales):-

	2013-14 Est.	2014/15 Proj.	
		May	Jun
<b>Beginning Stocks</b>	90.03	97.91	99.00
<b>Production</b>	118.13	115.46	115.92
<b>Imports</b>	41.07	36.29	35.57
<b>Domestic Use</b>	109.82	111.83	112.29
<b>Exports</b>	41.02	36.29	35.56
<b>Ending Stocks</b>	99	101.66	102.71

And, USA cotton 2014-15 production is increase by 5 lakh bales to 15 million bales. Meanwhile, world trade is expected to lower on lesser import from China and Pakistan.

Cotton output in India estimated higher at 388.25 lakh bales (of 170 kg each) for season 2013-14, said Cotton Association of India (CAI). Maharashtra is reported with output of 79.25 lakh bales in the current season compared to 72.50 in previous season whereas production in Gujarat stood 120.80 lakh bales in 2013-14 against 83.30 lakh bales in previous season. What causes the cotton production to increase in India is the boosted yield derived by the favorable weather condition and BT cotton.

Cotton acreage in India, the second largest grower in the world, could surge for the first time after 2011, on expectation of higher returns. According to the market participants, cotton area is likely to expand to 12 million hectares in the coming season, noticing a growth of 3.4% compared to the previous year. Global prices which reached a two year high in March are encouraging farmers and other stakeholders to prefer cotton over the other crops. Expectation of El Nino is also a reason farmers are willing to plant cotton instead of other crops which requires more water than fiber crop.

MSP of Kharif crop 2014-15, including cotton would be announced on June 15. A moderate hike of Rs. 50 per quintal in MSP of cotton is reportedly suggested by Agriculture Commission.

### International Fundamentals:

According to the latest weekly crop progress released by USDA, 89% of cotton sowing is completed in United States (in major 15 states planted 98% of the 2013 cotton acreage) as on 8 June, 2014. Last year the figure for same was 87% during the corresponding period, slightly lower than the current crop progress. A five year average stands 91%, higher by 2% compared to the current planting figures.

World cotton trade is expected to notice timid sentiments in coming season. The volume of cotton traded worldwide is expected to decline to 8.1 million tons, noticing a fall of 8%, said International cotton advisory

committee (ICAC). Reason for the same is fall in shipment to China which was 5.3 million tons in 2011/12 and expected 2.1 million tons in 2014/15. World consumption on other hand is projected to increase by 3% to 24.2 million tons in 2014/15.

Global cotton inventory is expected to surge to the level of 21 million tones by the end of crop season 2014-15, said International cotton advisory committee (ICAC). According to the committee global trade is likely to decline sharply on lower demand from China.

## Outlook

We expect domestic prices to remain firm to steady in near term.
