

Domestic Fundamentals:

Market Outlook: Cotton market noticed mostly firm tone on Tuesday. Arrival stood lower at 34,200 bales today compared to 35,300 bales yesterday.

In The News: The deficit rainfall this year has created havoc among the farmers of Vidarbha region of Maharashtra. Farmers who had sowed cotton are now in fear of crop loss as scanty rainfall is expected this year. According to a report monsoon is likely to set in Maharashtra around July 05, delayed by around five weeks.

According to Ministry of Agriculture, Kharif sowing has reached to 131 lakh hectares as on 27 June, 2014. Cotton sowing is in progress, around 29.07 lakh hectares of cotton has been sown so far.

According to Maharashtra Agriculture State Department, cotton sowed area till June 27 was down by 37% to 5.42 lakh hectares against 8.54 lakh hectares sown last year during corresponding year.

Cotton sowing in India is around 48% lower than the last year due to delayed monsoon as reported on June 25 by Directorate of Cotton Development. Estimated area sown for cotton in India stood 29.07 lakh hectares as on June 25 compared to 55.77 lakh hectares last year during the same period. According to Gujarat Agriculture Department cotton planting in state was 5.35 lakh hectares as on date mentioned compared to 11.25 lakh hectares last year during the same period.

The Union Government has announced MSP of Kharif crops (season 2014-15), including cotton on June 25. The MSP of cotton has been raised to Rs. 3750 per quintal for medium staple and Rs. 4000 for long staple, which were Rs. 3700 and Rs. 4050 respectively last year.

Expectation of Below-than-normal rainfall is threatening farmers about yield loss in cotton. 60 percent farmers in Adilabad have sown cotton in dry lands. Last year almost 41 cm rainfall was recorded during June whereas currently it around 5 cm. The actual rainfall required for cotton is 60-70 cm.

Cotton acreage in India, the second largest grower in the world, could surge for the first time after 2011, on expectation of higher returns. According to the market participants, cotton area is likely to expand to 12 million hectares in the coming season, noticing a growth of 3.4% compared to the previous year. Global prices which reached a two year high in March are encouraging farmers and other stakeholders to prefer cotton over the other crops. Expectation of El Nino is also a reason farmers are willing to plant cotton instead of other crops which requires more water than fiber crop.

International Fundamentals:

According to the market participants, new cotton crop is not in good condition in China, the largest producer of cotton. The daily temperature remained lower by 6-10 degree Celsius during 20-26 June compared to previous year during the corresponding period.

Cotton prices in international market are tumbling down on lackluster trading activities. The most active December'14 contract on ICE has witnessed around 30 month lowest open interest on June 27. Cotlook A index fell to 89.30 cents/pound on June 27, lower by 2.15 points on weekly basis. The cotton market is now awaiting the USDA planting report and world demand and supply report.

Tanzania farmers and stakeholders, along with Tanzania Cotton Growers Association (TACOGA), Tanzania Cotton Association (TCA) and Tanzania Cotton Board (TCB) have set the cotton MSP at TSH 750 (USD 0.446)/kg for new marketing season beginning June 18, 2014.

Outlook

We expect domestic prices to remain steady to weak in near term.
