

Domestic Fundamentals:

Market Outlook: Cotton market noticed steady to weak tone on Saturday.

In The News: According to Ministry of Agriculture, around 125.29 lakh hectare of area has been sown under cotton this year as on September 12, around 10.3% higher than the previous year, when it was 113.50 lakh hectares during the same period.

According to the Central Water Commission (CWC), current live storage of water in main reservoirs of India as on 11 September this year is 119.785 BCM, which is 77% of the live capacity at Full Reservoir Level (FRL). Due to weak monsoon rains this year the same has fallen by 6% compared to the previous year which was 83% during the same period. Although the late revival of monsoon has raised the storage by 6% compared to the previous week and 5% compared to 10 years average.

The Cotton Association of India (CAI) has revised its estimates for the cotton production in the country. According to CAI cotton output in India would be around 40.37 million bales (6.86 million tonnes) in season 2014/15 which was earlier estimated 39.62 million bales in August for the same season. Consumption of cotton in the coming season is likely to be around 30 million bales, said CAI.

According to the latest report by USDA, cotton exports are likely to fall by 35% to 7.69 million bales following the weak demand from China. Bangladesh and Vietnam are likely to emerge as leading export destination for India as China, the largest importer is likely to import lesser.

Recent rains in Punjab and Haryana threatening cotton farmer of crop loss. Cotton growing districts including Bhatinda, Mansa, Ferozepur, Mukhtsar, Moga, Faridkot, Sangrur, and Barnala districts have been severely affected by the rains, which could affect the yield loss and ultimately the production.

For the country as a whole, cumulative rainfall during this year's monsoon, up to September 7, 2014 has been 11% below the Long Period Average (LPA). The actual rainfall recorded at 675.3 mm against the 761.7 mm of normal rainfall-IMD.

Cotton imports in India will be 12-year high this season as international prices are ruling lower compared to the domestic prices. Prices on ICE US falling below 90 cents per pound since May, which is making domestic prices in India less competitive. Millers signed to buy cotton from overseas and most of the inbound shipments are reported after May. In domestic market Shankar-6 is ruling at around Rs.39,000-40,000 per candy (of 356 each) whereas the same for December delivery is available at 65.75 cents a pound, which is approximately Rs.31,500 per candy. Cotton Import is expected to surpass 17 lakh bales by the end of this season 2013/14. It was season 2002/03 when the country witnessed 17.67 lakh bales of cotton import.

The Government of Telangana has proposed to develop an industrial corridor along NH-44 between Hyderabad and Nagpur in Maharashtra. This proposal is likely to bring prosperity in cotton industry in Adilabad. Around 134 cotton ginning, pressing and cottonseed oil mills are located in Adilabad district, which are likely to be benefited by developing this corridor.

Indian cotton mills are likely to get affected badly on China's decision to raise spending on farm subsidies by 10 per cent. Following this decision, yarn production in China will enhance as it will provide cheaper cotton to the spinning mills in the country. It should be noted that China is the largest importer of cotton yarn and export destination for around 50% of overall export of cotton from India.

International Fundamentals:

Australia estimated cotton production in the country to be around 580,000 tons, 29% lower than the June estimates which was 820,000 tons, according to a report released by Australian Bureau of Agricultural and Resource Economics and Sciences. Australia produced 890,000 tons of cotton last year whereas output of cotton this year is likely to decline as dry weather condition prevails in the country.

According to the latest report released by USDA, as on August 31, 2014, 50% of cotton crop in USA is in excellent to good condition compared to 51% a week ago and 45% a year ago. 96% setting bolls has reported in cotton which was 90% last week and 94% a year ago. 31% of bolls opening reported which was 19% a week and 15% a year ago.

World inventories are likely to surge to 22.25 million tonnes by the end of season 2014/15, estimated International Cotton Advisory Committee (ICAC). Global production is expected to be around 26.05 million tonnes this year slightly lower than production in 2013/14 which stood around 25.53 26.09 million tonnes.

Outlook

We expect domestic prices to remain sideways to weak in near term.
