

Domestic Fundamentals:

Market Outlook: Cotton market noticed weak tone on Monday.

In The News: According to Ministry of Agriculture, around 125.75 lakh hectare of area has been sown under cotton this year as on September 22, around 10.69% higher than the previous year, when it was 113.60 lakh hectares during the same period.

China, the world's top consumer of cotton, will slash its import quotas to 894,000 tonnes for 2015 to boost demand for domestic fibre. Non-quota imports are subject to a 40 per cent tariff, so the restricted availability of import quotas will inevitably dampen Chinese demand for foreign cotton. These restriction further add pressure on cotton prices. (Source-The Hindu, Business Line)

According to the first advance estimates for season 2014-15 released by Department of Agriculture and Cooperation, production of cotton is likely to be around 34.62 million bales (of 170 kgs. each), approximately 1.97 million bales lower than the production in season 2013-14, which stood around 36.59 million bales and around 2.02 million tonnes higher when compared to the normal production.

Ministry of Textile with alliance of Department of Agriculture has started reviewing the crop related and other supportive measures to enhance the crop yield. It includes putting restriction on seed varieties and development in seed technology adopted by process of replacement and not by addition.

India is expected to surpass China in cotton production by the upcoming crop season, said USDA. India is expected likely to produce 6.53 million tons of cotton compared to 6.75 million tons in the season 2013/14 whereas China's cotton production would be around 6.42 million tons which was 6.96 million tons a season before.

According to the Central Water Commission (CWC), current live storage of water in main reservoirs of India as on 11 September this year is 119.785 BCM, which is 77% of the live capacity at Full Reservoir Level (FRL). Due to weak monsoon rains this year the same has fallen by 6% compared to the previous year which was 83% during the same period. Although the late revival of monsoon has raised the storage by 6% compared to the previous week and 5% compared to 10 years average.

The Cotton Association of India (CAI) has revised its estimates for the cotton production in the country. According to CAI cotton output in India would be around 40.37 million bales (6.86 million tonnes) in season 2014/15 which was earlier estimated 39.62 million bales in August for the same season. Consumption of cotton in the coming season is likely to be around 30 million bales, said CAI.

According to the latest report by USDA, cotton exports are likely to fall by 35% to 7.69 million bales following the weak demand from China. Bangladesh and Vietnam are likely to emerge as leading export destination for India as China, the largest importer is likely to import lesser.

Recent rains in Punjab and Haryana threatening cotton farmer of crop loss. Cotton growing districts including Bhatinda, Mansa, Ferozepur, Mukhtsar, Moga, Faridkot, Sangrur, and Barnala districts have been severely affected by the rains, which could affect the yield loss and ultimately the production.

International Fundamentals:

Cotton area in Brazil is likely to fall by 11 percent to one million hectares in year 2014/15 compared to the previous year. Weak domestic prices are making cotton less lucrative for the Brazilian farmers. In response to the situation, Government of Brazil has approved the allocation of approx. USD 134 million to finance the Equalization Premium Paid to the Producers Program (PEPRO) in order to support cotton producers in the country.

According to the latest report released by USDA, as on September 14, 2014, 49% of cotton crop in USA is in excellent to good condition compared to 43% a year ago. 51% bolls open has reported in cotton which was 39% last week and 34% a year ago. 6% of cotton harvesting reported which was 4% a year ago during the same period.

World production is expected to decline slightly by 0.57% in season 2014/15, according to USDA. Expectation of lower production in China and Brazil is the major cause of declining world production. In the upcoming season, world cotton output is likely to be around 25.69 million tonnes compared to 25.844 million tonnes in the current season.

Cotton acreage in China is expected to fall by 8.7% this season compared to the season 2013. Yield is also expected to fall said Ministry of Agriculture (MoA).

Outlook

We expect domestic prices to remain sideways to weak in near term.
