

Domestic Fundamentals:

Market Outlook: Cotton spot market noticed steady to weak tone on Monday.

In The News: According to Indian Cotton Federation (ICF), unsold stocks of cotton held by the ginners and traders are approximately 20 lakh bales. CCI has sold 6.68 lakh bales of cotton so far from the stocks it procured during the current season under MSP procurement operation. Cotton arrival on the daily basis has been diminished to 40000 bales per day.

Department of Agriculture and Co-operation (DAC), Ministry of Agriculture (MoA) has revised the cotton production estimates up for season 2014-15 at 353.28 lakh bales in its third advance estimates against the target of 350 lakh bales and 351.52 lakh bales which was estimated in second advance estimates. The final estimate of cotton production for season 2013-14, as estimated by DAC was 359.02 lakh bales.

India exported 0.41 lakh bales of cotton last week (04-10 May 2015), which was 0.426 lakh bales previous to last week (27 Apr-03 May 2015), according to the data released by IBIS and compiled by Agriwatch. Imports on the other hand stood 0.091 lakh bales last week, which was 0.177 lakh bales previous to last week.

Cotton exports in the coming season that is 2015-16 is likely to be around at 1.089 million tones (64.05 lakh bales approx.) around 28.6% lower when compared to 849 million tones (49.9 lakh bales approx.) in the current season, said USDA.

Cotton production in India would be on lower side in 2015-16, said USDA. Cotton output in the country would be around 6.423 million ton in the coming season, slightly lower than when compared to the current season which would be around 6.523 million tones. Acreage of cotton in India would shrink in the coming season to 12 million hectares from 12.7 million hectares in the current season. Yield of cotton would be higher at 535 kg per hectare in the coming season as compared to 514 kg per hectare in the current season.

Around 88 percent of cotton has arrived in the market as on 28 April, 2015 said CCI. According to CCI approximately 34 million bales of cotton (roughly 88 percent of production estimates for MY 2014/15) has been arrived in the market till the mentioned date which was 33.41 million bales during the corresponding period last year.

Despite the lower production world cotton expected to rise in the coming season i.e. 2015-16 following the higher demand from South Asian countries. According to ICAC, Cotton exports from India would be around 1.34 million tones (78.8 lakh bales) in the next season around 27.62% higher when compared to the export of current season.

Cotton Corporation of India (CCI) has decided not to release the entire cotton stocks immediately in the market, rather it will release in the phases. Textile industry is constantly demanding CCI to release the stocks so avoid artificial shortage of cotton. CCI has procured around 86 lakh bales of cotton at MSP this season, highest procurement since 208-09, which has lifted the cotton prices in the domestic market which is putting the textile industry in the trouble by making raw cotton costlier.

International Fundamentals:

According to Informa Economics, all cotton acreage in USA would stand around 9.334 million acres, lower than the March estimates of USDA which was 9.549 million acres.

World cotton exports are likely to decline slightly in 2015-16 to 7.329 million tones from 7.362 million tones in 2014-15. Cotton exports from India in the coming season that is 2015-16 is likely to be around at 1.089 million tones (64.05 lakh bales approx.) around 28.6% higher when compared to 849 million tones (49.9 lakh bales approx.) in the current season.

China cotton imports in the coming season is likely to drop by around 22.07% to 1.306 million tons in the coming season that is 2015-16 from 1.676 million tons in the current season, said USDA.

Cotton ending stocks are expected decline in the coming season for the first time in the last five years. Lower production and higher consumption would lead the ending stocks to fall. In the upcoming season ending stocks would be around 23.143 million tons round 3.59% lower when compared to the estimated figure of 24.005 million tons in the current season.

World cotton production is likely to decline in 2015-16 following the fall in area and yield, said USDA. According to the first estimate for 2015/16 released on May 12, cotton production on the global front is likely to stand around 24.22 million tons in 2015-16 around 6.73% lower when compared to the estimated production for season 2014-15 which is 25.97 million tons.

Outlook

We expect domestic prices to remain range bound to firm in near term.
