

Domestic Fundamentals:

Market Outlook: Cotton spot market noticed mostly steady tone on Tuesday.

In The News: Cotton Association of India (CAI) projected the total cotton supply in the country at 45.36 million bales and domestic consumption at 31 million bales and leaving the surplus of 14.36 million bales. According to CAI, by the end of May, domestic mills consumption was recorded at 27.4 million bales which was around 26.66 million bales last year during the same period last year.

A notification has been issued by Government of Maharashtra to seed selling companies to reduce the price of Bt cotton seed including the varieties Bt Bollguard 1 and 2 by Rs.100 each. However no change would be made to price of non-Bt Hybrid cotton seed.

According to the Southern India Mills' Association (SIMA) the cotton ending stocks by the end of season 2014-15 is likely to stand around 70 lakh bales, highest ever cotton stock since 2008-09. As cotton production in the coming season is likely to decline on domestic and global front, higher cotton carryover stocks would place India in comfortable position on the supply side.

Around 9.32 lakh hectares of cotton have been planted as on 05th June throughout the country, approximately 14.5% lower when compared the sowing of cotton during the corresponding period last year which was 10.90 lakh hectares, said Press Information Bureau (PIB).

India exported 0.624 lakh bales of cotton last week (25-30 May 2015), which was 0.622 lakh bales previous to last week (18-24 May 2015), according to the data released by IBIS and compiled by Agriwatch. Imports on the other hand stood 0.231 lakh bales last week, which was 0.128 lakh bales previous to last week.

Around 3.45 crore bales of cotton has been pressed so far all over the country, according to reports of Indian Cotton federation (ICF). ICF believes that cotton growers in states like Gujarat and Maharashtra may switch to crop like pulses and groundnut as they find cotton crop less lucrative due to untimely rains and lower prices.

Following the expectation of the delayed monsoon and lower than expected rainfall this year, the Maharashtra government fears that the situation of cotton belts could get worse and to hedge the risk, the government is planning to promote non Bt cotton seed, which are have lower production costs than the Bt variety of cotton. As per the data of Ministry of Agriculture, the cost of cultivating cotton is highest in Maharashtra which leads to the lowest profit margins.

The monsoon in country is likely to arrive late as forecasted by Indian Meteorological Department (IMD). IMD believes that southwest monsoon will arrive by June 5, on the southern coast of Kerala against the normal start date of June 01. IMD earlier forecasted the onset date of Monsoon as May 30 with the model error of plus-minus 4 days. Monsoon rains during the previous year i.e. 2014, arrived on Kerala coast on June 6.

Cottonseed sale could drop this Kharif season, as reported the industry. Around 4.40-4.50 crore packets (450 gm each) of cotton seed are likely to be sold in the country this season, lower when compared to the 4.75 crore packets sold last year. Currently the industry is holding the stock of 6.5 crore packets, out of which 1.5 crore packets are considered not-so-good quality seeds.

International Fundamentals:

Around 87% of cotton planting has been completed in USA as on June 07 this year, which was 61% last week and 81% last year on same date, according to USDA. The five year average sowing progress is 89% as on date, slightly higher than the current sowing pace.

World cotton imports are likely to increase marginally in the coming season i.e. 2015-16, said ICAC. The cotton imports on the global front would go up by the 2% to 7.7 million tons with the increase of 3% in the imports of countries outside china to 6.1 million tons.

China imported around 160,800 tonnes of cotton in April, approximately 28.3% lower when compared to the volume imported during the same month last year, according to the official custom data. During the initial four month of the year, imports to China fell by around 38.2 percent year on year to 609,000 tonnes, said China Cotton Association (CCA) citing custom data.

Outlook

We expect domestic prices to remain range bound to weak in near term.
