

## Domestic Fundamentals:

**Market Outlook:** Cotton spot prices noticed range bound to weak tone on Friday.

**In The News:** Last year, around 1.5 million hectares off cotton crop was destroyed in Punjab, Haryana and Rajasthan due to whitefly. A revenue loss of Rs. 10000 crore was incurred by farmers despite use of pesticides worth Rs. 500 crore. Therefore a whitefly resistant cotton seed has been developed by the NBRI. This will help farmers in the states of Punjab and Haryana, as these two are worst hit by whitefly in last couple of years.

Acreage of cotton is expected to be lower this year; it has already touched a three year average low at 23 lakh hectares. Yield is expected to be higher on account of late but good and widespread rainfall which will result in a good crop size. Final acreage and production for Gujarat are likely to be around 25 lakh hectares and 99.3 lakh hectares respectively.

India the largest producer of cotton is likely to buy up to 2 million bales of cotton this year. Till date India has imported around 1.5 million bales of cotton and has already signed contracts to purchase an additional 400,00 bales according to government sources. Imports have increased amid lower domestic production and lower prices in the global markets.

In its first estimate, Cotton Association of India (CAI) has estimated output for the year starting October 2016 at 336 lakh bales of 170 kg each. In the current year, production has been estimated at 337.5 lakh bales as on July end. Though acreage till date is around 10% lower compared to previous year, productivity will help to support output.

India exported 0.121 lakh bales of cotton last week (22 -28 August 2016), which was 0.146 lakh bales previous to last week (15 -21 August 2016), according to the data released by IBIS and compiled by Agriwatch.

Major importer of Indian cotton during the week (22 -28 August, 2016) was Bangladesh. According to the data released by IBIS and compiled by Agriwatch, Bangladesh imported 0.087 lakh bales of cotton from India in the past week (22 -28 August, 2016). Other major importers were Indonesia, Pakistan, Thailand and Japan and their imported volumes were 0.019 lakh bales, 0.011 lakh bales, 0.003 lakh bales and 0.001 lakh bales respectively.

Department of Agriculture, Ministry of Agriculture (MoA) in its second advance estimates, has revised the cotton production estimates downwardly for the season 2015-16 at 306.92 lakh bales (of 170 kg each). For the season 2014-15, the estimate was 346.23 lakh bales according to the first advance estimates for the season.

The Foreign Agriculture Services (FAS), division of USDA has lowered the production forecast for India in its latest report to 356 lakh bales. The reason for the downfall in the revision is lower yield expectation in Punjab and Haryana due to the attack of white fly and impact of pink bollworm in Gujarat.

According to Cotton Association of India (CAI), the arrivals during 2015-16 season up to the end of April 2016 are estimated at 302.40 lakh bales, lower compared to previous year. This reduction in the arrivals of cotton is an indication of a lower crop this season.

### International Fundamentals:

The International Cotton Advisory reduced world cotton stock estimates and International cotton prices jumped to over 80 cents/lb in the second half of July 2016 from an average of 70 cents/lb for the rest of the season. Significantly lower crops in the five largest producing countries and higher than expected demand led to tighter stocks at the end of 2015/16, at which time world ending stocks were estimated to have fallen by 12% to 19.7 million tons. Stocks outside of China decreased by 9%, to 8.4 million tons, which is the lowest level since 2010/11, when they reached 8.3 million tons. Furthermore, strong demand in China has reduced its national stocks by 12%, to 11.3 million tons.

Pakistan is likely to produce 13 million bales of cotton this season. This is slightly higher than previous year's production. Close co-ordination between the Central Government and the government of Punjab by controlling the Pink Bollworm has helped the farmers and they had also been trained to drain their fields properly to safeguard their crops.

According to USDA latest report, global 2015/16 cotton ending stocks are revised down this month. World 2015-16 cotton production is projected at 97.92 million bales, 18 per cent below last season. World ending stocks are now projected lower at 100.27 million bales. For India, production is forecast at 26.8 million bales, same as previous month's estimates and India's crop is estimated 9 per cent below 2014/15 and the lowest since 2009/10.

### Outlook

**We expect domestic prices to remain range bound to firm in the near -term.**
