

Domestic Fundamentals:

Market Outlook: Mixed sentiments were recorded in cotton spot markets on Saturday.

In The News: : US multinational companies have been dominating cotton farming in the country during the last few years. Government's Central Institute for Cotton Research (CICR) has secured approval for 3 varieties of indigenous Bt seeds suitable for the northern states. By next fortnight, 4-5 seeds each, suitable for the central and southern states of the country will be put for approval before Indian Council for Agricultural Research (ICAR). The biggest advantage with indigenous Bt seeds is that the farmer need not buy a fresh bag of seeds each sowing season. The seeds can be derived from the previous year's crop itself.

According to industry sources, cotton supplies in the Indian spot markets declined by 15.9 per cent to 10.8 million bales during October –December 2016 compared to same period previous year. Supplies declined amid demonetization by the Indian government in the first week of November 2016.

In its mid season estimates, Cotton Association Of India (CAI) has revised its cotton crop estimate downward at 341 lakh bales for the 2016-17 season compared to the earlier estimates of 346 lakh bales estimated in October. CAI projected total cotton supply of 404 lakh bales, with domestic consumption at 290 lakh bales, thereby leaving an available surplus of 114 lakh bales in its crop estimates for December 2016.

In 2016 kharif season, all India cotton acreage was reported at 102.79 lakh hectares compared to 116.41 lakh hectares during the previous season losing around 20 per cent area to pulses. The Centre had also asked the farmers not to sow cotton in view of a very bad season in the previous year and some farmers kept away from cotton amid fear of poor performance of Bt Cotton. However it is likely to make a comeback in the upcoming kharif season as farmers have fetched good price for the crop. Prices touched around Rs.6000 - 6500/ql levels in September 2016 compared to Rs.4000-4500/ql during the same period previous year. Farmers who shifted to pulses are likely to make a comeback to cotton following lower prices of pulses. According to industry sources, acreage under cotton is likely to increase by around 20 per cent this season. However the exact picture will be clear depending on south-west monsoon, availability of seeds and farmers awareness.

According to the Cotton Corporation Of India (CCI), producing contamination free cotton is the biggest duty for the country. Indian cotton is sold at discounted rates in comparison to equivalent foreign cotton. Contamination is mainly at farm level due to small land holdings by farmers, manual picking and different climatic conditions. Indian cotton is mostly contaminated with various foreign materials like jute twine, dust, plastic, fibre during handling at farm level and processing of cotton in ginning and pressing factories according to industry sources.

According to the latest estimates by the Cotton Association Of India, India is likely to produce 345 lakh bales cotton in 2016-17 compared to 338 lakh bales during the previous season. Improvement in productivity amid favourable weather condition in the cotton growing regions has supported the growth of the crop. Though the productivity of the country is below world average, government initiatives and scientific research will help to achieve the average productivity level soon.

The Foreign Agriculture Services (FAS), division of USDA has lowered the production forecast for India in its latest report to 356 lakh bales. The reason for the downfall in the revision is lower yield expectation in Punjab and Haryana due to the attack of white fly and impact of pink bollworm in Gujarat.

International Fundamentals:

Bangladesh grows about 180,000 bales (1 bale=218 kgs) of cotton in a year, which is 1 per cent of their annual demand. It aims to grow 1 million cotton bales by 2025 according to sources at Bangladesh Cotton Association (BCA). The country is now the biggest importer of cotton in the world and spends more than \$3 billion on cotton imports annually. India meets around 50 per cent of the current cotton demand.

According to the latest Chinese customs data, cotton yarn imports declined by 15.9% to 1.97 million tons in 2016 compared with 2015.

In the 2016-17 cotton marketing year, US cotton exports are likely to increase by 35 per cent. US market share of world cotton trade is forecast to increase as exports have increased 66 per cent year on year in the first five months of the current marketing year. The higher cotton export growth was mainly due to higher exports to China, Indonesia, Vietnam and other small countries.

According to USDA latest report, global 2016/17 cotton ending stocks are revised up this month. World 2016-17 cotton production is projected at 105.34 million bales, around 9.20 per cent above last season. World ending stocks are now projected higher at 90.65 million bales. For India, production is forecast at 27.00 million bales, same as previous month's estimates and India's crop is estimated 2.27 per cent above 2015/16.

Outlook

We expect domestic prices to remain range bound to firm in the near -term.
