

#### **Domestic Fundamentals:**

Market Outlook: Cotton spot markets noticed range –bound to weak tone on Saturday.

**In The News**: During April –December 2016, India's cotton yarn exports declined by 12 per cent to 872 million kg compared to the same period previous year. However hopes of revival of cotton yarn exports from India have increased as the Chinese cotton auction began at 25 per cent higher price than that prevailing in the Indian domestic market. Chinese textile mills are likely to import cotton yarn instead of cotton as Indian cotton attracts 3.5 per cent duty in China. Moreover the cotton auctioned at China is up to seven –year old and the quality of cotton would start deteriorating and turning yellow when stocked for more than two-three years.

Punjab Agricultural University in Ludhiana has developed country's first genetically-modified (Bt) varieties of cotton, the seeds of which can be reused by the farmers, thereby saving the repeated cost they have to bear every season. Indian Council of Agricultural Research (ICAR) has identified three Bt cotton varieties — namely PAU Bt 1, F1861 and RS 2013 — for cultivation in states of Punjab, Haryana and Rajasthan. According to sources, the price of seed of these Bt cotton varieties shall be much lower as compared to current market price of Bt cotton hybrids seed, and thus, there is a scope to reduce the cost of cultivation and increase the savings of the farmers.

The agriculture ministry is likely to retain the current maximum sale price (MSP) for genetically modified Bt Cotton seeds at Rs. 800 per 450 gm packet for the next kharif season. Last year, the MSP was reduced from Rs. 830-1000 to Rs.800 per 450 gm packet. The royalty fees was reduced by 74% from Rs.163 to Rs.49 per packet.

Around 60 per cent of the total crop sown over 4.5 lakh hectares of land in Punjab was affected by whitefly pest attack in 2015. The agricultural department of Punjab will remove whitefly-infested weeds across the cotton belt in order to increase the production of cotton in the state. The department will schedule technical training sessions and awareness camps in time for purchasing and sowing cotton seeds. The department expects over 4 lakh hectares of area to come under cotton cultivation this year, which is 56.25 per cent more as compared to 2016. Around 2.56 lakh hectares of area was under cotton cultivation in the last season and this was recorded as the lowest acreage for the crop since 1955.

According to the International Cotton Advisory Committee (ICAC), India's cotton exports are expected to increase by 3 per cent to 900,000 metric tonnes in the current season and production is expected to increase by 2 per cent to 5.9 million metric tonnes. World cotton trade is estimated to increase by 3 per cent to 8 million tonnes in 2017-18 as China's import volume is expected to increase by 11 per cent to 1.1 million tonnes during the year. China's imports will increase amid good demand from mills.

The Cotton Association of India (CAI), has maintained the crop estimate for 2016-17 at 341 lakh bales of 170 kg. each in its latest estimates for January. Consumption is expected to increase marginally to 295 lakh bales compared to previous estimate of 290 lakh bales amid good demand from the textiles sector. Total arrivals of cotton in the country as on January 31, 2017 is reported at to be 157.75 lakh bales. The projected balance sheet drawn by the CAI estimated total supply for cotton season 2016-17 at 405 lakh bales. Considering the domestic consumption of 295 lakh bales as stated above, the total available surplus for the season is estimated at 110 lakh bales. The imports are estimated to decline by 3 lakh bales to 19 lakh bales from 22 lakh bales previous year.

#### **International Fundamentals:**

Chinese government is expected to start sales from its cotton reserves on March 06, 2017. Around 2.6 million tonnes were sold by the end of September previous year. The government will continue offering 30,000 tonnes a day until August 2017. Assuming around 2.6 million tonnes will be sold this year, the total volume held by the Chinese government will reach six million tonnes by the end of 2016 -17. China's total stocks, including those in the private sector, are forecast to reach nine million tonnes at the end of 2016 -17, accounting for 53 per cent of world stocks.

Good demand for quality lint, increasing prices in the global markets and lack of availability of quality cotton led to increase in cotton prices in Pakistan during the previous week. The Karachi Cotton Asso¬ciation increased its spot rates by Rs. 50 to Rs 6,700 per maund (37.3242 kg) and Rs 7,180 for 40 kg. The Ex-Karachi rates also increased to Rs 6,835 per maund and Rs 7,325 for 40 kg. There is good buying from the millers amid limited stocks with ginners.

According to USDA latest report, global 2016/17 cotton ending stocks are revised up this month. World 2016-17 cotton production is projected at 105.72 million bales, around 9.00 per cent above last season. World ending stocks are now projected higher at 90.48 million bales. For India, production is forecast at 27.00 million bales, same as previous month's estimates and India's crop is estimated 2.27 per cent above 2015/16.

#### **Outlook**

## We expect domestic prices to remain range bound to firm in the near -term.
