

Domestic Fundamentals:

Market Outlook: Cotton spot market prices were noticed mixed tone on Wednesday.

In The News: with domestic cotton prices falling to 40000 rupees per candy and the rupee weakening by over 2.5 %, export enquires have increased in the last couple of weeks.

Prices of cotton in major spot markets have fallen 4-5 % in the last 2-3 weeks. Since Oct 1, export orders for over 3.0 mln bales have been shipped, of which 2.8mln have been shipped out so far.

Future price of cotton (at NCDEX, Feb contract) closed lower this week at Rs.930 per maund (of 20 kg each) which was Rs 934 a week earlier.

As per Maharashtra new textile policy, cooperative spinning mills and power loom societies will be allowed to be privatized, provided they are ready to return to the government the equity, loan and interest, the new policy will exist for next five years from 2018 to 2023

Lint prices remained weak during the week owing to weak tone prevailing in market. Average price of lint at Sirsa during the week was Rs. 4185 per maund (of 37.32 Kg each), compared to the previous week price of Rs 4232.

All India cotton daily arrivals reported from 110-120k bales against an average of roughly 140k bales last week. Arrivals are mainly slowing down in the northern states. As per trade sources, 24.50 million domestic bales arrived until 20th February and export business continues in the Vietnam, Bangladesh and the Pakistani mainly for March shipment.

India's market share in home textile imports by the US remaining flat at 33% during 2017, its share (in US dollar terms) in cotton sheets increased 1% to 50% during the year. India has been consistently gaining the 1% market share in cotton sheets every year since 2012.

India's export of cotton sheets to the US (in US dollar terms) increased 1.9% year-on-year \$717million in 2017. Indecently cotton sheet exports from the rest of the world. The world to the US declined 0.3% during the year.

Infestation of pink bollworm in major cotton producing regions of the country has led to an increase in cotton prices since mid-December 2017. This coupled with a 2% reduction in cotton crop estimate for 2017-18 season (October-September) and the 6.4% yo-y appreciation of the rupee continues to remain an overhang for the textiles sector.

The Cotton Association of India (CAI) has, in its latest estimate, lowered the crop size by 8 lakh bales (of 170 kg each) to 367 lakh bales against the earlier estimate of 375 lakh bales. For the 2017-18 season, beginning from October 1, 2017, the CAI reduced the crop estimate to 367 lakh bales citing severe infestation of cotton with pink bollworm.

The projected Balance Sheet drawn by the CAI estimated total cotton supply for the season at 417 lakh bales of 170 kgs. each including the opening stock of 30 lakh bales at the beginning of the season and the imports which the CAI estimated at 20 lakh bales for 2017-18 crop year. The domestic consumption is estimated to be 320 lakh bales while CAI estimates exports for the season to be 55 lakh bales. The carry over stock at the end of this season on 30th September 2018 is estimated to be 42 lakh bales.

International Fundamentals:

The US Department of Agriculture, unveiling its first full estimates for world cotton supply and demand in 2018-19, forecast that the Cotlook A index of physical prices will "decline about 10 cents to 73 cents a pound" on a year-average basis.

Cotton Outlook forecast world demand next season at 26.71m tonnes (122.7m bales) in line with the USDA estimate.

The USDA forecast India's production at 27.5m bales, a drop of 1m bales year on year, seeing a fall in sowings.

Dull trading continued at the Karachi Cotton Exchange on Saturday, while spot rates remained firm. The spot rates remained unchanged at Rs 6,900/maund (37.324kg) and Rs7,395/40kg.

The Karachi Cotton Association on last week fixed the official spot rate, or base price, for Grade 3 cotton at 7,395 rupees per maund (40 kg). Grade 3 cotton has a staple length of 1-1/16" and micronaire value between 3.8 and 4.9 NCL (no control limits), which represents fine to coarse classes of cotton varieties. In the kerb market, the key crop varieties traded in the range of 7,250 to 7,200 rupees per maund.

In January 2018, Brazil exported 79,100 tons of cotton, earning \$130.3 million with average price of \$1,646.50 per ton.

The US department of agriculture (USDA) has lowered the country's cotton export target for 2017-18 to 14.5 million bales of 480 lb each, down 300,000 bales from the previous forecast. To meet the revised forecast, however, exports will still have to average over 350,000 bales per week.

The 2017/18 U.S. cotton supply and demand forecasts show slightly lower exports and higher ending stocks relative to last month. Production and domestic mill use are unchanged. The export forecast is lowered 300,000 bales to 14.5 million, based on a lagging pace of shipments to date. Ending stocks are now estimated at 6.0 million bales, equivalent to 34% of total disappearance.

The 2017/18 world cotton forecasts include slightly higher production, lower consumption and higher ending stocks. World production is 400,000 bales higher than last month, as higher estimates for China, Brazil and South Africa offset lower expectations for India and Australia. Global consumption is forecast 325,000 bales lower, as decreases for India and Thailand offset an increase for Vietnam.

World ending stocks are projected 760,000 bales higher, as a 1.1-million-bale increase in China's projected ending stocks – and higher U.S. stocks – offsets declines for India, Australia, Turkmenistan, Tajikistan and Vietnam.

Global cotton production is increasing at a faster rate. Current estimates for the season have production at 25.5 million tons and consumption at 25.4 million tons. Production increases are coming off the gains in planted area rather than yields this season. Global average yield for 2017/18 is currently being estimated at 773 kilograms per hectare, a 1% decrease from the previous season with a 12% growth in planted area. India and Pakistan, with estimated area increases of 16% and 24% respectively, encountered production losses from pink bollworm this season.
