

Domestic Fundamentals:

Market Outlook: Spot Market of kapas mostly traded negative on Monday as sentiments remains bearish with falling prices in future market. MCX 29 mm Cotton May contract is trading red in today's market taking cues from international market.

In The News:

The scarcity of water in Punjab persists due to acute shortage of canal water. However the local bodies are assuring release of water in coming days.

There are rains in the North West region of the country accompanied by heavy storm. There rains are going to be beneficial and is going to improve the sowing progress of the ongoing season.

According to the data released by the central water commission the storage level in H.P., Punjab, and Uttarkhand is way low to the normal storage level in the same time period. In HP the storage level is down by 48%, Punjab by 37%, and Uttarakhand by 39%.

Initial indication are showing that the cotton acreages is slated to be lower this year in Punjab and Haryana as the sales of BT seeds are down as being reported by seed marketers. The seeds sales are sluggish which may be due to lower availability of water in canals. With recent rains the sales of seeds is expected to improve but still the scepticism looms over cotton acreages in these states.

Seed companies are saying that the farmers are shifting towards other crop especially paddy and maize. It is to be noted that farmers in Punjab and Rajasthan go for basmati paddy and the sowing starts from May onwards. Last year basmati fetched good returns. Seed sellers are saying that the sowing in the states may drop by 15-20% despite of 8% discount on seeds offered to farmers. Punjab government is targeting cotton acreages at 4 lakh hectares.

The Maharashtra government sanctioned Rs 176.12 crores for the compensation to the farmers affected by loss of crop due to pink boll worm attack in Nanded district. The amount will be disbursed to the bank account of the beneficiaries.

In a recent development ministry of Agriculture has decided not to change the prices of cotton this season after the Delhi High court decision of denying Monsanto patent on their 2nd generation BT Cotton "Bollgard II". The Bollgard II prices has been priced at INR 740 per packet of 450 gm which includes the trait value of INR 39 being paid to trait technology patent holder. Currently the matter is with Supreme Court for further hearing.

Recent spells of rain across the northern belt is going to boost the planting prospects of Cotton in the Northern cotton belt. Widespread rains has been reported in the north western states along with strong wind and the same is forecasted for another couple of days.

Still saurashtra zone has 12 lakh bales equivalent of kapas with farmers, north Gujarat has around 50,000 bales, other states like Andhra, Madhy Pradesh has small quantity kapas has to come.

The CAI in its latest estimates, The production figures for the states of Maharashtra and Karnataka are estimated to be higher by 2 lakh bales and 50,000 bales respectively while the production in the states of Telangana and Andhra Pradesh are now estimated lower by 1.50 lakh bales and 1 lakh bales respectively thus retaining the crop at the same level as in the previous estimate made by the CAI in the last month.

International Fundamentals

In US the planting has been done in 36% of the intended planting acreages ahead of 31% of last year and 5 year average as on 13th May. Last week rains in the South US region bettered the prospects of fast sowing of the season's cotton crop.

This year the cotton acreages is expected to be up by 7% against last year and 35% up from 2016. Kansas, Oklahoma and Texas are projected to increase cotton acres this year by 40%, 16% and 6%, respectively. In its March Prospective Plantings Report, the USDA is estimating there will be 13.5 million acres of cotton. This is due to lower grain prices, lower availability of water and cotton re-entry in farm bill. In response the ginner are expanding capacity in US.

A broad area of low pressure, moving slowly northward across the eastern Gulf of Mexico, has a 30 percent chance of strengthening into a tropical cyclone in the next 48 hours, the U.S. National Hurricane Centre said on Monday.

China sells 18,200 tonnes of cotton at auction of state reserves at average price of 14,450 yuan (\$2,280.76) per tonne, according to industry website cncotton.com. Sale represents 60.74 percent of total cotton available at the auction.

In Pakistan, Punjab Agriculture Department has asked farmers to grow cotton on maximum area as its demand is set to increase in 2018-19 due to various factors. In Pakistan sowing is underway amidst the shortage of irrigation water.

Turkey is considering stopping imports of US cotton and explores new markets for its cotton requirements including from India, Pakistan, Uzbekistan and Egypt after US imposed heavy duty on the iron rod angles from Turkey.

The government of Pakistan has allocated Rs 2.5 billion to boost the production of cotton in the country during the financial year 2018-19. The government is working towards using all the available resources to improve the agriculture sector as well as the financial condition of farmers and other involved in the industry.

Cotton crop in Australia is witnessing this year with areas like Macquarie Valley reporting yield as high as 16 bales per hectare. The crop quality is good with clean and limited leaf matter. The irrigated areas has reported above average yields whereas the dry areas are reporting below average yields. Analysts are expecting harvest of 4.6 million bales equivalent to 1 million ton if lint.

It is noted that the Australian cotton is high in demand because of quality and its suitability for blending. The Australian cotton is imported by Bangladesh, Thailand, China, India and Vietnam.

In the latest WASDE report released on 10th of this month the global end stock for the MY 2017-18 has been almost unchanged to 88.21 Million bales of 480 pound from 88.29 million bales in previous WASDE estimate. US end stock has been down to 4.7 million bushels from 5.3 million bales. US Cotton No 2 has traded sideways in yesterday trading session. New crop in US is estimated at 19.5 million bales against current season production of 23.79 million bales.

In the last few trading session cotton prices has rallied towards 4 years high on the back of lower water availability in key cotton growing regions of US. Persisting drought like conditions has kept the traders sceptical over US cotton production numbers. The growers are expecting good yield this year as the pest attack has been limited and may make up the fall in acreages.

However there has been forecast of near- to above normal rainfall across most of the country will contrast with drier-than-normal conditions in southern Texas.
