

Domestic Fundamentals:

Market Outlook: Cotton prices are expected to Range-bound. Due to improving acreage and weather conditions in top cotton growing states - Gujarat and Maharashtra and incidence of pest attack and increase in MSP by government may keep the prices supported going ahead.

In the News: The reports of pink bollworm infestation in cotton growing areas of Maharashtra, state government has released Rs 16.97 crore to check the infestation. Depending upon the extent of pink bollworm infestation, aid from this amount will be released to respective cotton growing districts in the state.

The apex cotton trade body, the Cotton Association of India (CAI), will ink an agreement with the BSE to develop a cotton futures market for commodities derivatives trading in the BSE. Announcing the signing of a Memorandum of Understanding (MoU) with the BSE, CAI said the two bodies will join hands to work together on developing a cotton futures contract for BSE's commodity derivatives segment.

The Cotton Corporation of India (CCI) has signed a memorandum of understanding with the Central Warehousing Corporation to use its warehouses for cotton storage. CCI purchased 3.6 lakh bales of cotton at MSP during the current cotton season. With the steep hike in MSP, the CCI might have to purchase huge quantities next season. During the current season CCI used 170 warehouses across the country, including those, of CWC, state government and private facilities.

As per Commerce ministry data, cotton exports in June surged by 27.6% to 570,000 bales (170 kg each) as compared to last year. India is likely to export 7 million bales of cotton in 2018/19 with China alone accounting for 30-40 percent, down 15% from an earlier estimate of 8 million bales due to low crops.

Cotton production is likely to decline by 3-4 per cent this year to about 350 lakh bales following deficit rainfall, decline in acreage and the outbreak of the pink bollworm infestation on crops, according to the Cotton Association of India (CAI). Major cotton growing States are facing issues, including deficit rainfall and shifting away from cotton to other crops, resulting in a decline in acreage and the outbreak of the pink bollworm infestation. This is likely to affect cotton production by 3-4 per cent this year to 350 lakh bales," CAI president Atul Ganatra told PTI.

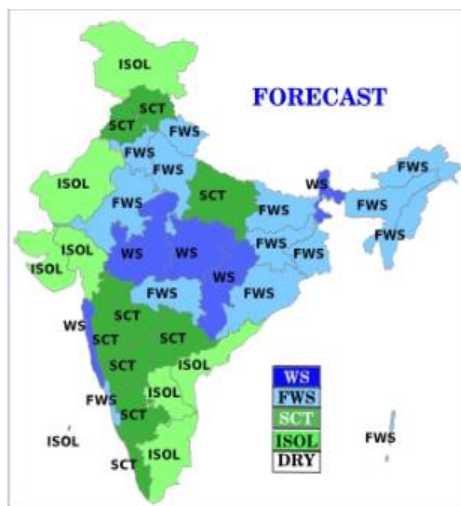

Due to irregular rains, cotton season is likely to begin late by a month in Gujarat, country's largest cotton producing state. According to cotton experts and industry, the crop plants are smaller than the normal size due to delay in sowing. Normally, the new cotton season begins in October and ends in September every year, but this time it is expected that new arrival will start from October end or in November due to abnormal monsoons in the state. The state has witnessed late monsoon and as a result many farmers have sown cotton crop late this year. Moreover, frequency of rains is also not normal. As per Gujarat agriculture department's data, cotton sowing has reached to over 2.71 million hectares, about 2.33% higher than last year's 2.65 million hectares.

As many as 700 villages in Maharashtra (mainly from Marathwada, Vidarbha and north Maharashtra regions) have officially confirmed that the outbreak of the pink bollworm infestation on cotton crops has crossed the economic threshold limit. The crossing of the threshold means that a sizable amount of the crop may be lost to the pest. This year, 39.7 lakh hectares of area has been brought under the cotton cultivation in Maharashtra, against last year's 41.1 lakh hectares

Cotton spinning mills are seeking parity with the Cotton Corporation of India (CCI) in getting relief from commission paid to middlemen in mandis in the northern states of Punjab, Haryana and Rajasthan. This year, the state-run agency is set to buy cotton directly to ensure that farmers get the minimum support price (MSP) in full, unlike in the past where the crop was sold and remuneration paid through an agent who would get a 2.5% commission on the payment. In most

states, the price of cotton bought by the CCI is transferred to the accounts of farmers. But in the North, most crops, including cotton until now, were sold through agents.

Weather Update:

07th Sep: Heavy to very heavy rain at isolated places very likely over Madhya Pradesh, Chhattisgarh and heavy rain at isolated places over Odisha, Assam & Meghalaya, Nagaland, Manipur, Mizoram & Tripura, SubHimalayan West Bengal & Sikkim, Jharkhand, West Uttar Pradesh, Uttarakhand, Haryana, Chandigarh & Delhi, Himachal Pradesh, East Rajasthan, Konkan & Goa, Vidarbha and Telangana.

Overall, the monsoon till August 30 has been 6 per cent less than normal, with several districts of north interior Karnataka, Rayalaseema, Bihar, Jharkhand, Saurashtra and Kutch staring at a shortfall. The rainfall, according to agriculture ministry officials, has been well-distributed, though overall quantum might have been low in some regions. This they said won't have any

SPATIAL DISTRIBUTION (% of Stations reporting)

Dry (No station reported Rainfall)			

impact on the overall production of kharif crops in 2018, which is poised for

another record.

International Fundamentals:

ICE cotton futures fell over 1 percent on Wednesday, the most since mid-August, on lingering fears of an escalation in the U.S.-China trade dispute, and as storm Gordon caused minimal damage to crops. The most active cotton contract on ICE Futures U.S., the second-month December contract, settled down 1.07 cent, or 1.29 percent, at 81.71 cents per lb.

Uzbekistan has planned to stop the export of cotton fiber and to ensure its full processing in the domestic market by 2025, RIA Novosti reported referring to Head of the Department of Strategic Forecasting of UzTekstilProm (Uzbek Textile Industry). According to her forecasts, in 2018, the industry will be able to process about 520,000 tons of cotton fiber with the current design capacity of 720,000 tons. Every year, the country produces about 3.5 million tons of raw cotton and 1-1.2 million tons of cotton fiber. About 50 percent of the produced cotton fiber is exported.

Vietnam spent more than US\$2 billion on importing cotton in the first eight months of 2018 – the biggest amount ever spent by the garment and textile sector. Of the total, imports from the US exceeded \$1 billion, according to the General Department of Vietnam Customs. The increase in spending on cotton imports was attributed to growth in garment and textile exports, as Vietnam depends on nearly 100 per cent imported cotton materials. It estimates it will buy more than \$3 billion worth of cotton this year, up \$700-800 million against the previous year. The country has also set a target of earning \$34-35 billion from garment and textile exports. Last year, the textile and garment industry gained a year-on-year increase of 10.23 per cent in export value to \$31 billion, beating its target set at the beginning of the year of \$30 billion.

Egypt's cotton exports increased 6.9% in the third quarter of the agricultural season of 2017/2018. Total cotton exports amounted to 160,100 metric quintals in the March-May period of 2018, compared to 149,700 metric quintals in Q3-16/17.

China Cotton Association released its latest 2018/19 crop forecast at 6.01 million tons, up 60,000 tons from last month and versus USDA's August estimate at 5.77 million, while other industry sources are pointing to an even higher crop. Favorable moisture with warm weather are benefiting the crop and improving cotton yields across Xinjiang.

MY 2018/19 cotton area forecast to 11.8 million hectares, 100,000 hectares lower than the official USDA estimate. The reduction in area is primarily in the two major cotton growing states of Gujarat and Maharashtra. Deficit rains and pest pressures have prompted farmers to either plant alternate crops, or delay/abandon planting altogether

This month's 2018/19 U.S. cotton forecast includes higher beginning stocks, production, exports, and ending stocks relative to last month. Production for the 2018 crop is raised 4 percent to 19.2 million bales, on this season's first survey-based production forecast. Beginning stocks are raised 0.4 million bales due to lower-than-expected 2017/18, exports are 0.5 million bales higher, at 15.5 million bales. Ending stocks are 0.6 million bales higher this month. Projected world 2018/19 ending stocks are down 1 percent this month, due to a combination of lower beginning stocks and higher consumption offsetting higher production. Beginning stocks are reduced 0.45 million bales, reflecting both lower production and higher consumption estimates for 2017/18. Production in 2018/19 is increased 0.4 million bales, with higher expected crops in the United States, Argentina, and Turkey offsetting reduced crops in Uzbekistan, Australia, and Turkmenistan. Consumption is raised 660,000 bales, led by a 300,000-bale increase for Pakistan, with smaller increases in Indonesia, Turkey, and other countries.
