

Domestic Fundamentals:

Market Outlook:

Demand for cotton is likely to remain robust in the coming months, both in domestic and international markets. This along with minimum support price hike is likely to keep cotton prices firm. Also, China is expected to purchase large quantities of cotton from India, replacing US as its largest source of cotton which is expected to keep the prices into next season supported.

In the News: Rains have damaged around 70% cotton fields in the Haryana state and crop loss in some areas may be very high. Overall, the yield may drop to around 390 kg per ha, the official said. The state, in its first estimate for 2018-19 crop output pegged cotton output at 1.70 mln bales (1 bale = 170 kg) with acreage at 669,000 ha and yield at 432 kg per ha. At a yield of 390 kg per ha, output from 669,000 ha will be a little over 1.53 mln bales. As per the preliminary survey, 51-75% crop has been damaged over 100,000 ha, 26-50% on 190,000 ha, and up to 25% on 185,000 ha. Crop over 486,000 ha, which is 70% of the total area under the crop, has been damaged anywhere between 5% and 75%, the official said. Hisar and Sirsa are major cotton producing districts that have been severely affected by the rainfall in September. Haryana is the major producer of cotton in north India.

Cotton prices are expected to remain firm in the long term with traders expecting export demand to pick up. Current delays in the arrival of crop in Gujarat and Rajasthan mandis may also support the prices. Agriwatch expect prices to move from the current Rs 5500 to Rs 6400 per Qtl in October.

The Cotton Corp of India will soon commence procurement of raw cotton in Punjab, Haryana and Rajasthan, once the new crop conforms to quality norms fixed for the current season that started Monday, a senior official said. CCI keeping a close watch and awaiting quality arrivals in the market as recent rains have led to moisture above the stipulated norms for the fair-average quality material.

Cotton October prices were slightly up in during the week on the Multi-Commodity Exchange (MCX) on emergence of some demand after Cotton Association of India (CAI) projected a decline in output in its first cotton estimate. CAI trimmed cotton crop estimates for 2018-19 season to 34.8 million bales from 36.5 million bales in 2017-18. Cotton sowing was reported at 12.06 million hectares for 2018-19 compared to 12.17 million hectare last year, according to Central government data.

CCI has geared up for large-scale MSP operations across the country as the Centre announced an MSP increase of 26-28 per cent for the fibre crop over last year. For the long staple variety, MSP has been increased by 26.16 per cent to ₹5,450 per quintal, while for the medium staple, MSP hike has been 28 per cent to ₹5,150 per quintal. CCI have already opened 330 centres and if required, may go up to 390 said P Alli Rani, Chairman and ND, CCI. Though CCI has opened 330 procurement centres across key growing states since October 1, purchases at support price have not begun so far due to the higher moisture content of over 12 per cent in cotton offered to CCI. Last year, CCI had procured less than four lakh bales under MSP operations, since the market prices rose quickly and went above MSP rates. This year since MSP rates are much higher, the probability of higher volumes being purchased under MSP is high

Cotton arrivals started picking up in the Telangana market yards. The State government has set the stage to commence the procurement operations in all 31 districts from today. Cotton purchase centres would be opened at 269 ginning mills. In addition to this, another 11 centres would be opened by the Marketing Department, according to the Marketing Department Director Lakshmi Bai.

Market arrivals in small quantities have begun across the key producing States of Punjab, Rajasthan, Gujarat, Telangana, Maharashtra and Karnataka. Trade sources estimated the cotton arrivals at around 40,000-50,000 bales of

170 kg each. Prices are hovering between Rs 5,200-5,600 per quintal across various markets, depending on the moisture content. Millers and ginners are yet to start purchases as the moisture content is still high.

Gujarat's Shankar-6 is being sold on higher rate than MH cotton by near Rs1000/candy. Reason behind it is the Gujarat Govt's support to spinning and textile mills development in state providing subsidy and cheap electricity. So, Gujarat mills consume 85 lakh bales yearly leading to hassle free sales and more rate. According to trade sources, cotton crop in Gujarat is expecting a big drop in production due to dry weather. Gujarat, the country's top cotton producing state, received 28 percent lower rainfall than normal in the June-September monsoon season, according to the India Metrological Department.

Weather Update:

15th **Oct** ♦ No weather warning.

The weather pattern's possible emergence and its impact on the north-west monsoon is an annual cause of concern for policymakers in India, where 60% of the crop area lacks assured irrigation. The summer-sown Kharif crop, which accounts for half of India's foodgrain output, is particularly dependent on monsoon rainfall. El Nino is part of a natural process, characterised by a warming in the Pacific Ocean, with repercussions across the globe, including higher temperatures and drought in some parts.

International Fundamentals:

According to customs' statistics of major exporters, arrivals of imported yarn in Sep are assessed at 142kt, down by 29% on the month. Of the total, cotton yarn containing over 85% cotton reached about 133kt. The major origins are Vietnam (50kt), India (28kt), Pakistan (28kt), Indonesia (8kt), Uzbekistan (9kt), Taiwan (7kt) and other regions and countries (12kt).

USDA lowered its projections for the world ending stocks to 74.45 million bales from 77.46 million bales forecast in the September report. It lowered its global production estimates to 121.66 million bales from 121.97 million in the previous month.

U.S. exporters struggle with a stronger dollar, cotton sales also have slowed. This week's Export Sales report showed just 70,300 bales of net new sales for 2018-19. China cancelled 50,200 bales for 2018-19 and rebooked 56,400 for 2019-20. Vietnam accounted for nearly half of this week's net new sales at 34,700 bales of new orders. However, this does not necessarily mean that demand is gone.

On September 28, the reserve sales of reserve cotton was 37110.3543 tons, the actual turnover was 20655.7506 tons, and the turnover rate was 55.66%. The average transaction price was 14,670 yuan/ton (down 127 yuan/ton from the previous day); the price of 3128 was 15,933 yuan/ton (down 315 yuan/ton from the previous day). From March 12 to September 28, the accumulated turnover of reserve cotton was 2,4848 thousand tons, and the turnover rate was 58.49%.

The latest U.S. Department of Agriculture (USDA) estimates for 2018/19 indicate that world cotton production is projected at 122.0 million bales, 1 percent below the previous season. While relative prices favored cotton plantings

this season, the effects of weather on production are expected to be mixed. India, China, and the United States remain the largest cotton-producing countries.
