

Domestic Fundamentals:

Market Outlook:

Demand for cotton is likely to remain robust in the coming months, both in domestic and international markets. This along with minimum support, Acreage drop and lower production this year, price hike is likely to keep cotton prices firm. Also, China is expected to purchase large quantities of cotton from India, replacing US as its largest source of cotton which is expected to keep the prices into next season supported.

In the News: *Kapas prices are quoting at Rs 5,900 per quintal at Gujarat and AP and are expected to trade higher towards Rs 6200 in the coming days. Dry weather amidst poor crop in major growing belts of Gujarat, Maharashtra and Karnataka are supporting prices in the spot market.*

At Guntur, the cotton crop has entered boll formation and boll development stage. Weather was hot and humid. Sucking pests like jassids, Thrips and whiteflies were observed in most of the fields. Awareness was created among the farmers on pink bollworm damage and management strategies through mass media and regular campaigns by scientists, KVK's and Department of Agriculture.

In Karnataka early sown crop is 140 -150 days old, but in majority area the crop is 135 days old. The crop is at boll opening stage in majority areas. First kapas picking is completed in early sown crop. Desi cotton crop is in growing vegetative stage. Dry spell prevailed during this week in all cotton growing districts with lower night temperature and dry weather during day time. Karnataka cotton prices of 29⁺ mm sold between 45,000 to 47,000 Rs./Candy during last week.

This season, the markets of Punjab saw the arrival of a relatively higher quantity of raw cotton compared with the previous season, despite lower acreage. A total of 2,45,500 bales (one bale=170kg) arrived in the mandis till November 8 whereas in 2017, 2,35,000 bales had arrived during the corresponding period.

As prevailing weather conditions and water scarcity hit cotton yields in key growing regions, trade body Cotton Association of India (CAI) has further trimmed its crop estimate to 343.25 lakh bales (each of 170 kg) for the season 2018-19 beginning from October 1. Earlier CAI, at the Cotton India 2018 meet in Aurangabad last month, had projected the crop size at 348 lakh bales for the year 2018-19, 365 lakh bales lower than 2017-18. CAI cited water shortage and climatic adversities as factors affecting the crop in the key growing regions of Gujarat, Maharashtra and Karnataka. The CAI has revised downwards the crop estimate for Gujarat by 2 lakh bales, Maharashtra by 1 lakh bales, Karnataka by 1 lakh bales and Orissa by 75 thousand bales than compared to its previous estimate due to unfavourable weather conditions.

Cotton prices traded slightly weak in major producing centers such as Punjab Madhya Pradesh and few parts of Haryana owing to rising supplies. Sources revealed that the progressive all India new cotton crop arrivals reached 2.70 million bales till 31 October 2018. Higher arrivals are witnessed from Northern Indian states due to favorable weather. Dry weather in the Maharashtra and Gujarat states during September-October month could impact on yield prospects.

Gujarat Cotton prices of 29 mm sold between 46,000 to 47,200 Rs./Candy during a week. Outstate arrivals of new Crop Kapas from Madhya Pradesh and Maharashtra have started in good quantities now. All Indian arrivals are picking up very fast and market adjusted to new season rates between 46,000 -47,000. Highest arrival is in north India so north cotton rate are more competitive.

The Chinese are substituting their cotton imports from US with India. India's cotton exports to China may see a fivefold jump to 4 million bales in the marketing year 2018-19 starting Oct 1 against 0.8 million tonnes in 2017-18, after China slapped a 25% additional duty on imports of the fibre from the US. India's forward export contracts of cotton have more than doubled from about 7 lakh bales in Sep 2017.

As per reports from many Cotton Experts, the Indian Cotton Crop is very low. Due to poor rains, the cotton plant height across India in major parts is maximum 1-1/2 ft to 2 ft only. Usually in a normal crop, it should be about 4+ ft. There will hardly 2 pickings of good cotton. This will end by December itself... From January, the 3rd and 4th picking will start and it will be 27mm only.

Cotton prices traded steady across major trading centers. Gujarat 29mm cotton traded around INR 47'000 per candy equivalent to US Cents 83.50 per lbs FOB Mundra for prompt delivery. Daily arrivals stood at 70'000 bales and are expected to gather pace from Mid-November onwards. The Indian rupee vs. the US dollar stabilized in the range of 73.15 to 74.00.

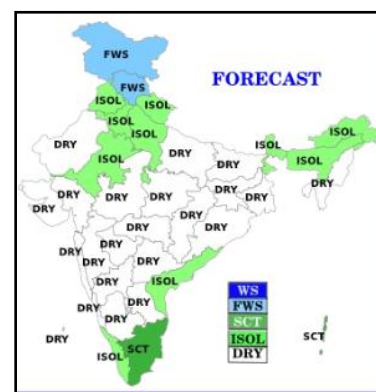

Cotton arrivals declined significantly in Maharashtra, the second-largest producer of the fibre crop, forcing ginning mills to operate at less than 30 per cent capacity as farmers held back stocks on expectations prices will rise. The daily all-India cotton arrivals are currently at 75,000 bales to 80,000 bales of 170 kg each, according to Atul Ganatra, president of the Cotton Association of India. However, cotton arrivals in Maharashtra have been ruling low at about 7,500 bales per day against the normal daily arrival of about 15,000 bales a day around this period of the year.

Weather Update:

14th Nov ♦ Heavy rain very likely at isolated places over coastal Tamilnadu and south Coastal Andhra Pradesh.

♦ Gale wind speed reaching 90-100 kmph gusting to 110 kmph very likely over southwest & adjoining westcentral and southeast Bay of Bengal. Squally winds speed reaching 45-55 kmph gusting to 65 kmph very likely along & off north Tamilnadu & Puducherry and adjoining south Andhra Pradesh coasts

- In October, India got a paltry 44% of the month's average—the lowest since 1976.
- An erratic monsoon, such as the one this year, poses extensive challenges for adaptation.
- Maharashtra, which has declared drought in 42% of its area, is in the throes of a groundwater crisis.
- Experts have rung warning bells about the possible impacts of the brewing El Niño.

International Fundamentals:

China revised down its forecast for imports of cotton in the 2018/19 crop year to 1.5 million tonnes, compared with last month's forecast of 2 million tonnes, the Ministry of Agriculture and Rural Affairs said on last week. Output of the fibre in 2018/19 is forecast to be 5.94 million tonnes versus last month's 5.8 million tonnes, according to the ministry's monthly China Agriculture Supply and Demand Estimates. Cotton ending stocks are forecast at 6.38 million tonnes versus a previous forecast of 6.74 million tonnes.

This month's 2018/19 U.S. balance sheet shows lower production, consumption, exports, and ending stocks. Production is reduced 1.35 million bales due mainly to decreases in the Southeast, reflecting the impact of adverse weather. Domestic mill use is reduced 1.00 lakh bales and exports are reduced 5.00 lakh bales. Projected ending stocks in 2018/19 are 7.00 lakh bales lower this month, at 4.3 million bales or 24 percent of use. The marketing-year-average price received by producers is forecast between 71.0 and 77.0 cents per pound, with a midpoint of 74.0 cents, 1 cent above last month.

This month's 2018/19 world supply and demand forecasts include lower beginning stocks, production, consumption, trade, and ending stocks. Historical revisions to Benin's exports resulted in a 3.75 lakh bales decrease in 2018/19 beginning stocks there, accounting for much of this month's 5.00 lakh bale decline in global beginning stocks. Forecast global production is reduced 2.3 million bales as smaller expected crops in the United States, India, Pakistan, and Turkmenistan offset an increase in Benin. Consumption is reduced 8.75 lakh bales, with smaller expected mill use in India, Pakistan, Turkey, Brazil, Indonesia, and the United States. Global ending stocks are 1.8 million bales lower this month, at 73 million bales or 57 percent of mill use.

The US Department of Agriculture's Foreign Agricultural Service has projected India's Cotton production in 2018-19 (Aug-Jul) at 36.5 mln bales, down nearly by 2% against 37.2 mln bales in previous year, where one Indian bale equals 170 kg. Dry weather in the key growing regions of Gujarat and Maharashtra have hampered crop development and will likely to affect yields of standing crop. The US agency has estimated opening stock of Cotton for 2018-19 at 15.6 mln bales, higher than the opening stock of 14.3 mln bales in 2017-18. Imports have been estimated at 1.9 mln bales in 2018-19, compared with 2.2 mln bales in the previous year. On the demand side, consumption by mills in 2018-19 is seen at 32.1 mln bales, slightly higher from 31.4 bales a year earlier. Exports are seen falling to 5.5 mln bales from 6.7 mln bales in 2017-18. Considering consumption and exports, the closing stock at the end of 2018-19 is pegged at 16.6 mln bales, up from 15.6 mln bales the previous year.

The Chinese are substituting their cotton imports from US with India. India's cotton exports to China may see a fivefold jump to 4 million bales in the marketing year 2018-19 starting Oct 1 against 0.8 million tonnes in 2017-18, after China slapped a 25% additional duty on imports of the fibre from the US. India's forward export contracts of cotton have more than doubled from about 7 lakh bales in Sep 2017.
