

Domestic Fundamentals:**Market Outlook:**

The price in Indian market is higher than that internationally. This is backed by higher MSP and purchases by CCI. The market may move up only through larger off take by exporters or by domestic industry. This may occur gradually over the next few months.

News:

Cotton prices are expected to remain firm this year due to lower production in the country, apart from rising consumption in both the domestic and overseas markets. Prices may rise by March end, when market despatches will reduce. A weakening of the rupee will also help overseas demand for India's cotton exports. According to trade sources, export business was reported for China, Indonesia and Bangladesh markets. However, export sales volume still remains nominal. Total cotton exports for 2018-19 season (October-September period) reached around 2.5million bales till December 2018. Agriwatch have kept a target to export 53lakh bales.

The CAI in its latest estimates the cotton crop for 2018-19 season is expected at 330 lakh bales of 170 kgs. each which is lower by 5 lakh bales than its previous estimate of 335 lakh bales made during last month. The CAI has reduced the crop estimate for Telangana by 2.50 lakh bales, Andhra Pradesh by 50,000 bales and Karnataka by 2 lakh bales. The main reason for lower crop is that in the Southern Zone farmers have uprooted their cotton plants due to moisture deficiency as a result of which there is no scope further pickings.

Cotton output in Gujarat is seen declining nearly 50% on year to 5.2 mln bales in 2018-19 (Jul-Jun), according to the second advance estimate of the state farm department. In its first advance estimate in September, the government had projected cotton output in the state at 8.83 mln bales. Below-normal rainfall in key growing regions has resulted in a sharp fall in cotton yield, which is seen falling to 326 kg per ha from 660 kg last year.

Cotton prices have softened further, despite a lower crop, on weak demand from both yarn mills and overseas markets. Cotton prices are now hovering around Rs.42,500-44,000 levels per candy (356 kg each), a decline of about a tenth over the comparative prices in October. At the beginning of the cotton harvest season in October, cotton prices were around Rs.47,000 per candy.

So far, farmers across the country have sold about 160 lakh bales from the current crop. There's still an equal quantity of cotton that farmers will be bringing into the markets over the next couple of months. This is even as ginners are finding it hard to sell the processed cotton because of disturbances in currency and trade war.

US-China trade relations have started to hurt India's cotton yarn exports and there is a chance of more damage. Chinese importers have renegotiated orders of Indian cotton yarn worth \$400-500 million in the past few weeks. The US-China tariff war had benefited India. Between June and September 2018, the US announced high customs duties on several Chinese goods and China retaliated by increasing levies on US goods. India exported \$892.4 million worth of cotton yarn to China in April-November, up 2.5% from \$870.2 million in 2017-18.

As per the latest estimates by Agriwatch, cotton output in country during the season 2018-19 would be around 338.22 lakh bales (of 170 kg each) which is lower compared to 365 lakh bales of last season. AW has reduced the crop estimate for Gujarat to around 92.82 lakh bales (from 108 lakh bales last year), Maharashtra to around 72 lakh bales (83 lakh last year), Telangana and AP by 52.00 lakh and 16.50 lakh bales respectively. The main reason for reduction in cotton crop is that farmers have uprooted more than 50% of their cotton crop after second picking and foregone the third and fourth pickings due to moisture deficiency and pest attacks. Dry spells in the initial stages of the crop, too, led to stunted growth of bolls, were the major reasons to decline in cotton yield in India.

Weather Forecast for tomorrow:

Fairly widespread rain and snow is expected over Jammu and Kashmir, Himachal Pradesh and Uttarakhand. Light to moderate rain and thundershower with few heavy spells is possible over Punjab, Haryana, West Uttar Pradesh and scattered over Delhi and North Rajasthan. Hailstorm is also possible over parts of these states. Light rain may also commence over parts of Bihar. Light to moderate rain will occur over Chhattisgarh and parts of Vidarbha. Day temperatures will drop across the northern plains.

International Fundamentals:

During this week NY future lost near about 150 points. Still there is no good progress to resolve the trade dispute.

Long awaited USDA WASDE Report was finally released after two months. As a backward revision in 2017-2018 USDA lowered world consumption by a net 588,000 bales effectively world's ending stock was increased by nearly two million Bales, otherwise it is neutral.

By the conclusion of the 2018/19 season, world cotton stocks are projected to drop to 17.6 million tonnes, reflecting a decrease of 5% from the prior year and registering the fourth straight year of decline, the International Cotton Advisory Committee (ICAC) said in its latest report. Consumption is expected to remain steady but a 3% decline in global production will draw down the world's warehouses, the report said. Production in China is estimated to increase 1% to 5.94 million tonnes, and when combined with a 7% decline in India's production due to insufficient rainfall, the changes mean China will regain the 'top producer' title it lost to India in the 2015/16 season.
