

Domestic Fundamentals:**Market Outlook:**

Cotton prices expected to trade higher side due to exports demand from International markets especially from China. Moreover, raising domestic demand and procurement by CCI also support prices. However reports of CCI likely to start selling of its stock in first week of April may keep prices in range.

News: Daily cotton arrivals have declined to about 80,000-90,000 bales as against 1.3 lakh bales last year. Also the market price of raw cotton or kapas gained 10 per cent above the minimum support price (MSP) at Rs.5,850-5,900 a quintal after CCI bought about 12 lakh bales. And Nearly 90 lakh bales of the fibre is lying in stocks, of which mills have about 45 lakh bales, while the remaining is with corporates, CCI, ginners and MCX.

The latest estimates by the Indian Cotton Association pegs domestic cotton production at 328 lakh bales for the 2018-19 season, compared to its preliminary estimates of 348 lakh bales. The current year output is 10 percent lower than the 2017-18 season. Moreover, increasing probability of El nino is a concern for Indian monsoon, and thereby for the Kharif grown fibre crop.

Short supply in local markets caused India to impose a ban on cotton exports. The export ban for cotton was imposed with "immediate effect", a statement issued by the Indian Commerce Ministry. India has already exported 8.5 million bales (1.4 million tons) in the current financial year, which ends in March that is more than a government estimate of 8.4 million bales. It was also to ensure that India has enough cotton available locally and even rising demand for the commodity in China pushed up prices, threatening India's textile makers.

Government has decided to reduce royalties paid by Indian seed companies to Monsanto for its genetically modified (GM) cotton by 49 percent to 20 rupees for a packet of 450 grams, according to a farm ministry order. Cotton prices moved mostly higher in the international markets.

Cotton prices may rebound and rise around 10% by July, according to a survey by the Cotton Association of India. The survey was conducted on last week among 250 participants, including ginners, spinners, trade officials and brokerages, at the Cotton India 2019 International Conference. The participants in the survey pegged the spot price of Shankar-6 cotton, the top traded variety of the commodity, at 46,000-47,260 rupees a candy (1 candy = 356 kg), up from 42,000-43,500 rupees now.

At present the current rate of 29mm good quality cotton is Rs. 42,000 per candy in the spot trade, which was Rs. 41,000 per candy during same period of previous year. At this rate Indian cotton is having good parity for export. If this rate continues for another 45 days, we will achieve our export target of 50-53 lakh bales very easily.

CCI is going to commence the sale of 1.1 million bales cotton procured in the 2018-2019 (October-September) and we expect another 4-5 lakh bales would be procured in the coming weeks. Cotton procured sale may probably start from first week of the April. The government had raised the support price for cotton by 26% this year. Prices have improved 2-4% from the recent lows and currently hovering around 20,800 rupees per bale. Prices may rise even more as China started buying Indian cotton from last month.

Shankar-6 (29mm cotton) variety is now trading around 43,500/candy and may rise at least 8% in the coming days, due to expecting the low arrivals in coming days and also good demand witnessed from china after this pulwama tensions.

Government set the maximum sale price for BT Cotton at Rs. 730 per packet for bollgard BG- II version reduced by Rs.10 in the earlier year and also cuts the trait value (royalty) on BT Cotton by half to Rs. 20 for 2019-2020 fiscal year.

Domestic prices traded firm during this week, mainly due to lower daily arrivals and good demand for Indian cotton from China. All India cotton supplies are reported to be about 135 thousand bale per day. According to trade estimates, Indian traders have contracted for export 5 lakh bales to China for shipments in the next two months.

CAI had estimated exports for the 2018-19 season to decline by 27 per cent to 50 lakh bales, compared with the estimated exports of 69 lakh bales during last year. India's total cotton exports shipment is around 32 lakh bales up to February 2019. If this rate continues for another 45 days, we will achieve our export target of 50-53 lakh bales.

Indian cotton exporters are upbeat due to a spurt in demand for cotton from China, especially at a time when cotton exports to Pakistan have come to a halt due to the tensions between the two neighbours. According to trade estimates, Indian traders have contracted for export 5 lakh bales to China for shipments in the next two months.

Pulwama attack retaliation: India halts cotton exports to Pakistan amid tensions. The unease between India and Pakistan, exporters see a temporary slump in flow of consignments for a few days. Cotton exports to China from India, are on the upswing. About 4 lakh bales have already been shipped to China in the last 10 days and another 10 lakh bales are expected to be shipped from the country soon, traders said.

Weather Forecast for tomorrow:

The Western Disturbance as an upper air trough lies over Jammu and Kashmir and adjoining region. It induced upper air cyclonic circulation lies over Southwest Rajasthan. Another cyclonic circulation persists over Central Assam in the lower level. A cyclonic circulation is also seen over parts of North Interior Karnataka. A trough is extending from Telangana to Kerala across the above cyclonic circulation and interior parts of Karnataka.

International Fundamentals:

Cotton futures posted 29 to 115 point gains in most contracts on Monday. A weaker dollar was supportive. The Cotlook A Index was up 175 points on March 22 to 86.40 cents/lb. The USDA Adjusted World Price (AWP) is 65.83 cents/ lb and in effect through Thursday.

U.S. shippers sold only 125,000 bales, but shipments were better than the prior week at 350,100 upland bales but were still below the average needed to hit the USDA target. Nevertheless, sales and shipments are expected to be better next week.

For 2019-20, the USDA expects a healthy increase in production to 126.5 million bales. The global cotton market, which was earlier estimated to be in a deficit is expected to turn into a surplus in 2019-20. Mill-use is projected to increase at a rate near the long-term average next crop year to 125.5 million bales. US-China trade relations would continue to play a major role and the main catalyst for global cotton prices.

According Pakistan Cotton ginners Association, the Pakistan cotton production fell 6.84 percent to 10.762 million bales as of, March 15 from 11.5m in the corresponding period of last year. The textile spinning industry purchased 9.641 m bales as against 10.954 m in the corresponding period of last year.

This month's 2018/19 world cotton estimates show higher production and ending stocks, and slightly lower trade. Production is estimated up 350,000 bales in Brazil on higher area and 200,000 bales up in Pakistan based on arrivals at gins. Production is 100,000 bales lower in Australia due to weather. World trade is forecast 140,000 bales lower with reductions for Brazil and Indonesia on the export and import sides based on activity to date. Ending stocks for 2018/19

are forecast 590,000 bales higher this month, at 76.1 million bales. This would be 5.1 million bales below their revised 2017/18 level.

Net UPLAND sales of 1,25,000 RB for 2018- 2019 were reported for Vietnam (84,700 RB, including 35,800 RB switched from China, 400 RB switched from Taiwan, and decreases of 100 RB), Turkey (21,500 RB), India (16,300 RB), Pakistan (10,300 RB), and Bangladesh (5,100 RB). Reductions were reported for China (11,600 RB), Hong Kong (6,600 RB), Malaysia (4,200 RB), Indonesia (4,000 RB).
