

Domestic Fundamentals:**Market Outlook:**

The Rajkot mandi price for variety Shankar 6 stood Rs.38,350/per candy (68.17 cents/lb). Cotton prices across India reported to show mixed trend prices ranging between Rs.5000 to 5550 across India today compared to the previous day and prices started moving towards MSP. Whereas, the International prices got weaker due to lack of any progress on US-China trade front also with weaker export sales report by USDA.

News: According to the trade sources, Total arrivals stood around 29.28 lakh bales so far till 21st Nov'19. And a total of 8.48 lakh bales have arrived in this week ending on 21st Nov'19 higher against 6.15 lakh bales last week. Of this, 4.49 lakh bales were from Central India, followed by 2.13 lakh bales from South India in this week. The arrivals from North India (in Haryana, Punjab & Rajasthan) have started so the arrivals increased to around 1.85 lakh bales this week.

Cotton prices gets support in Adilabad district as the farmers are bringing dried cotton to the procurements centers as recommended by CCI. Their produce attracting the minimum support price (MSP) of Rs 5,500 per quintal. The trend of bringing dried up produce to the yards is catching up rapidly. Also CCI is preparing the procurement centers in Guntur to start soon as without CCI procurement in the area, the private traders are buying cotton at around Rs.4000/q.

Gujarat cotton Shankar 6 variety prices has decline to Rs.38000 to 39000/ candy since last week on quality concerns after the heavy rains. Whereas before October month the prices remained firm around Rs.40000 to 43000/ candy. Most of the cotton growing centres, not just in Gujarat but across India, received rains in October, which adversely affected the quality of cotton. Similarly, the raw cotton (kapas) prices in Adilabad is prevailing around Rs.5000/q as per the moisture content.

CCI has so far begun procurement in Punjab, Rajasthan, Haryana and Gujarat, and now in Maharashtra, Telangana and Karnataka at MSP. Farmers are to get Rs. 5,450-Rs. 5,500 per quintal while market prices are much lower at Rs. 5,100 per quintal for better quality cotton. The procurement centres in MH would be open in phases since the moisture content is currently high. Corporation had procured around 40,000 bales so far compared to 2000 bales in same period last year and the total arrival in the market until date has been close to 25 lakh bales.

CCI is in full swing to procure cotton from North India that were in sluggish mode during the last month due to high moisture content. The prices in Punjab, Haryana and Rajasthan recovered to certain level around Rs.5300-5400/q during this week. The agency had gradually increased its purchase, as cotton produce arriving in the market these days had moisture content within permissible limits.

According to the Indian Cotton Association Limited (ICAL), more than 15 lakh bales of raw cotton have arrived in the mandis of Punjab, Haryana and Rajasthan in September and October, according to the Indian Cotton Association Limited (ICAL). Rajasthan has recorded arrivals of 7.13 lakh from September 1 to October 31, while the figure is 6.01 lakh bales in Haryana and 1.91 lakh bales in Punjab.

High moisture content in fresh cotton harvest arriving in spot market has hit purchases and availability of quality produce as desired by textile mills. Therefore, arrivals as well as the prices for the low quality declined by this week. CCI in Andhra Pradesh is not procuring as expected leaving the window open for private traders. Farmers are not getting the MSP at very lower prices around Rs.4800 to 5050/q on selling to private traders whereas CCI is procuring cotton at MSP (Rs.5550/q).

CAI released its estimates for 2019-20 season at 355 lakh bales of cotton production, up by 13.6% compared to the previous year's production. Comparatively, Agriwatch estimates the production might range around 351 lakh bales in 2019-20 against 321 lakh bales in 2018-19 season. CAI projects that exports are likely to remain steady at last year's level of 4.2 million bales, the lowest in a decade. If exports to remain steady, the United States and Brazil exports may increase to key Asian buyers such as Vietnam, Bangladesh and Pakistan.

According to the latest data released by the textile industry, the Indian cotton yarn exports declined drastically by 33% till Sep'19 from the starting of the financial year in April'19. India exported 101 million kg in 2018 while only 67 million kg in 2019 during April to September. The top importers of cotton yarn (including raw cotton) were China (-55%), Bangladesh (-42%) and Egypt so far in 2019 although the exports to these countries were lesser compared to the previous year (2018) because of disparity between domestic and international cotton prices. Decline in raw cotton exports from Bangladesh (-45%), Vietnam (-83%), China (-88%), Pakistan (-42%) and Vietnam (-33%) also witnessed decline probably due to the higher Indian cotton prices. The countries preferred buying cotton from Brazil and USA where the prices prevailed between 60-65 cents/lbs.

CCI has not started procurement yet in bulk quantities in Punjab and Haryana. Still the kapas prices in both the states are prevailing around Rs.5200-5400/q with the moisture content ranging between 13-15%. Whereas procurement in Adilabad market has started procurement primarily Primary Agricultural Cooperative Societies (PACS) and then would be lifted by CCI. Farmers are advised to dry the cotton, which got drenched in rain.

Farmers in Adilabad, Telangana are distressed as they are not getting fair price of at least the MSP for cotton that has started trading from today (6th November'19). Government agencies and private traders said that the moisture content is very high due to the continuous rains and farmers are ready to charge a low price. To ensure that farmers get a better price for cotton, the administration has implemented to ensure the arrival of cotton in phases in the mandis on the basis of mandals so that the entire quantity of cotton produced in the entire district does not reach the Adilabad market at the same time. Also the farmers would get enough time to reduce down the moisture to (8-12%) which are the permissible limit for CCI to procure cotton.

Weather Forecast for tomorrow:

During the next 24 hours, light to moderate rain and thundershowers are expected at many places in Jammu and Kashmir, Ladakh, Himachal Pradesh and northern parts of Uttarakhand. There is a good possibility of snowfall as well in these places. Northwest India is likely to experience partly cloudy to cloudy sky with shallow to moderate fog during early morning hours. The latter part of the day will be bright, sunny and comfortable. Delhi is most likely to experience very poor pollution levels. Due to the presence of a trough, Tamil Nadu, Kerala and extreme southern parts of Karnataka south Andhra Pradesh will receive light to mod rain and thundershower.

International Fundamentals:

Cotton finished the day with losses of 34 to 45 points, DEC 19 Cotton closed at 61.79, down 45 points. The 11/20 Cotlook A Index was down another 60 points to 74.40 cents/lb. The weekly update to the AWP for cotton is back down to 56.36 cents per lb. The update lowered it by 70 points wk/wk, the previous adjustment was an increase of 1.03 cents per lb.

The US Export Sales report from USDA showed 227,600 RB of 2019-20 upland cotton sold in the week ending 14th Nov'19 were down by 34% compared to previous week. With major buyers including Vietnam (95,600RB), Pakistan (40,100 RB), Bangladesh (31,200RB), Turkey (28,200 RB), followed by Japan (14,300 RB) and reductions were from China (24,200RB). For 2019-20, net upland shipments exports of 1,37,900 RB were up 9% from previous week and were primarily to Pakistan (28,800RB), Vietnam (27,300RB) and China (22,000RB).

The USDA's weekly crop progress report showed cotton harvest crest above 68% complete in the week ending 17th November against 58% in same period last year. The 7 day forecast from the national weather service is indicating another wet week, the map indicates that most of the cotton region will get precipitation. The average pace of harvesting is 66%, with Texas was 56% complete, Georgia has harvested 79% of their crop 6 percentage points ahead of average.

Data released by Pakistan Cotton Ginners' Association (PCGA), Pakistan cotton production up to November 15 at 6.85 million bales, down by around 21% over 8.67 million bales in same period last year. Affected by climate change, the cotton production continues to give a gloomy picture as effects of high temperature, heavy rains and gusty winds reduced crop by around 1.814 million bales. A steep fall in cotton production in Punjab was the major factor which reduced overall output

in the country. Punjab produced 3.69 mln bales as against 4.98 mln in corresponding period last year, showing a decline of around 26%. Sindh also suffered immensely, crop was lower by 14.14% at 3.16 mln bales, compared to 3.68 mln produced in same period of previous season.

Exports of raw cotton from Pakistan during first quarter of current financial year increased by 53.65% as compared the exports of the corresponding period of last year. According the data of Pakistan Bureau of Statistics, during the period from July'19-September'19, about 6,980 metric tons of raw cotton worth 10.828 million dollar exported as compared the exports of 4,619 metric tons valuing 7.043 million dollar of same period of last year. However, the exports of cotton yarn and cotton cloth decreased by 6.19% and 5.60% respectively and was recorded at 294.280 million dollar.

The 2019 U.S. crop is now estimated further down to 20.8 million US bales. USDA lowered U.S. production 60,000 bales from previous month' estimates and lowered ending stocks from 7 million bales down to 6.1 million bales. USDA reported the overall 62% of the crop have been harvested higher against 53% in the previous year. The excellent quality of the crop is stimulating export demand as the crop moves to warehouses whereas the reduction in production estimates is triggering more imports by US.

Pakistan is expecting shortfall in cotton production and around 3.5-4.5m bales would have to be imported. Cotton production for current season (2019-20) would not be more than 9 million bales as estimated by the country earlier. The production from the Punjab having sharply declined due to the excessive rains and due to the use of inferior quality pesticides made the situation uncontrollable.
