

**Domestic Fundamentals:****Market Outlook:**

The cotton physical market showed mixed trend today due to the commencement of CCI procurement on large scale. MCX cotton spot price was down at Rs.21,690 /bale Friday. ICE cotton futures closed green on Wednesday.

**News: Genetically modified cotton seed prices have been increased by 5 percent.** India has raised the prices for genetically modified cotton seed by 5 percent for the fiscal year that began in March. The prices are now at Rs 767 for a 450 gram packet and are up from 730 rupees.

**Cotton farmers have gained this season as the cotton prices are above MSP.** During the cotton season of 2020-21, Cotton Corporation of India has procured around 92 lakh bales under minimum support price operation. For the last six weeks, cotton prices have been ruling much above MSP, and currently they are 15-20% above MSP. As a result farmers are getting Rs 6,400 to Rs 6,500 per quintal as against the MSP of Rs 5,825 per quintal. Initially, it was expected by the trade and market sources that CCI may be required to buy at least 1.5 crore bales but since the farmers are getting good price from the market forces itself, MSP intervention is not required now. This cotton season is almost at an end and has been a good year for CCI.

**Telangana Farmers are planning to increase area under cotton cultivation.** Telangana is planning to add another 15-20 lakh acres in the upcoming kharif season, taking the area under the fibre crop to 75-80 lakh acres. The state had experimented with the Regulated Cropping System last year, had dramatically increased the cotton area to 60 lakh acres from the previous record of 46 lakh acres in 2019. As they achieved the target of 60 lakh acres, the Telangana farmers had surpassed Gujarat, which grows cotton on about 56 lakh acres.

**Cotton production has been decreased by 2 percent for the 2020-21 season.** According to the Ministry of Agriculture and farmer's welfare, cotton production has been lowered by two percent from its first estimate to 28.5 million 480-lb. bales but is 13 percent higher than the 5 year average.

**Cotton exports from India are facing quality issues.** According to the trade sources, the quality of Indian cotton has emerged as a major issue in the export market with importing nations becoming reluctant to purchase the natural fiber from India, this in turn can also slow down the exports that are projected at 75 lakh bales. According to Southern India Mills Association, Cotton has quality issues this season particularly because of unseasonal rains during October and November. Although, CCI had denied the issue and was strict in ensuring that the cotton it procured this year adhered to the FAQ norms and is of good quality.

**Cotton Corporation of India has reduced the selling price of cotton as a onetime correction.** International prices had risen almost 12 percent in the last two months and dropped at the same rate. Although CCI had not increased the prices to that extent, prices went up only by 2 percent and it has now been reduced by almost 2 percent. Also, the amount of reduction in prices differs according to the variety of cotton.

**About 80 percent of the cotton has been sold in current cotton season.** Cotton farmers in the country have taken advantage of higher global price for cotton in the current season 2020-2021, resulting in at least 80 percent of the production being sold. Cotton arrivals were higher in the various markets in the country since the prices have ruled higher than the minimum support price of Rs. 5825 per quintal by the government. Although, arrivals in government procurement center (CCI) has been decreased to about 75,000 bales.

**Punjab Agriculture Department is likely to add 50,000 hectares area under cotton cultivation.** As there is good production in 2020 and no major pest outbreak in the crop for last 5 years, the Punjab Agriculture Department has decided to add 50,000 hectares under cotton cultivation in the malwa region this year. This will increase about 10 percent over the current area of 5 lakh hectares.

### Weather Forecast:

Thunderstorm with lightening & gusty winds very likely at isolated places over Odisha and with lightening & gusty winds at isolated pockets very likely over Gangateic West Bengal and with lightening at isolated pockets over Arunachal Pradesh, Assam, Meghalaya, Coastal Andhra Pradesh & Yanam and Kerala & Mahe. Heat wave to severe wave conditions very likely in isolated pockets over Coastal Andhra Pradesh & Yanam, and heat wave conditions in some pockets over Tamil Nadu, Pondicherry & Karaikal.

### International Fundamentals:

The ICE cotton Futures was down by 293 points at 77.95 cents/lb. The Cotlook A index was at 87.20 cents/lb. The AWP for cotton was at 68.55 cents/lb.

**Australian cotton exports are expected to grow in 2021.** Cotton production in Australia is expected to increase in 2021 as the country's normal weather replenishes reservoirs essential for irrigation. The monthly average cotton production is expected to grow 312.70 percent in 2020-21 to 0.22 million where else in 2019-20 season it was 0.05 million.

**The global 2020-21 cotton supply and demand estimates shows lower production and ending stocks, but higher mill use and trade.** Estimated global production is reduced nearly 830,000 bales largely due to lower Brazilian and U.S. production. Cotton imports pace and indications of recovering global consumption has helped boost consumption estimates for Turkey, Bangladesh, Pakistan and Vietnam, more than offsetting lower projections for U.S. and Taiwan. The forecast for 2020-21 world trade is more than 600,000 bales. On export side, higher Indian exports accounts for most of the increase as auctions by Cotton Corporation of India have released much of the cotton purchased during last year under the MSP program.

**According to US Department of Agriculture, global cotton consumption is expected to grow by 4.1 percent in 2021-22 seasons, substantially above the long term average rate of 1.7 percent.** World cotton stocks are expected to reduce by 3.2 million bales. Also, World cotton production is expected to rise 4.7 percent with the most significant year-over-year growth in Pakistan, Australia, Brazil, the United States and West Africa. Overall, strong cotton consumption growth in 2021-22 and tightening stocks are expected to support prices with the A-Index forecast up 7 cents to 90 cents/pound for the marketing year.
