These rains will further likely to affect the cotton crop in the coming week.

As per AgriWatch sources, the Cotton crop has been affected in the northern states of Punjab, Haryana and Rajasthan due to excessive rains in July month. The cotton crop has been affected in terms of yield and pest incidence as a result of that the cotton crop arrivals are expected to come late in the 2022-23 season (it is expected to come from 1st week of September 2022).

The Hisar district of Haryana has received above the average rainfall which poses a threat to the cotton crop. Although no major damage has been received so far but water-logged fields may further result in pest attack and yield losses. The Agriculture Department has asked the farmers to drain out the standing water from the cotton fields and also alerted the farmers to keep observation on the crop about attack by any pest. Overall, around 18-19 lakh acres of area is estimated to be in under cotton cultivation in the state for the 2022-23 season.

Overall, the cotton acreage in the north is expected to be around 1.5 million hectares and the same for southern states is likely to remain at around 3.5-4.0 million hectares. Agriwatch expects area under cotton cultivation to be 137 lakh hectares in the 2022-23 season.
