## USA Spot Prices

Cotton was sharply high during last week last week as weak overall demand continues to impact the US market. On the other hand, world production and supplies are going lower due to bad weather in the growing season for major producers around the world, including India, Pakistan, and Australia. China had problems with its growing weather, too. Demand for US Cotton has been disappointing, as the weekly export sales reports have shown average demand at best since the start of the marketing year. China has not bought any US Cotton this year and has been active in other markets, especially India. US prices are down and China might start to look at the US crop, but there have been worries about the quality of the US crop due to some extreme growing conditions in Texas and the Southeast over the Summer and Fall. Ideas are that the quality worries have kept some importers of US Cotton away from the market.

### Pakistan Spot Prices

Pakistan scrapped duties on import of cotton for February 1-June 30 to tide over shortage of the crop. In the current year, Pakistan has harvested 10.8 mln bales of cotton, down 25 per cent from initial target of 14.4 million bales. The Pakistan is likely to import 3.5-4 million bales - costing up to \$1.2 billion - as the crop size for season 2018-19 is estimated at 10.8m bales, against the annual demand of around 15m bales. India's cotton exports to Pakistan are unlikely to see a sharp jump, despite the neighboring country scraping import duty, as high domestic prices have made exports uncompetitive. Indian cotton is currently available around 43,000 rupees a candy, while prices in Pakistan are trading at 43,500 rupees per candy.
