This week, the estimated soybean yield for Argentina's 2022/23 harvest was reduced by 2.0 million tons to 36.0 million, primarily due to adverse weather conditions in Santa Fe, Entre Rios, and northern Buenos Aires. These regions are experiencing below-average soybean plant populations, short plant heights, flower abortion, and moisture stress, significantly impacting the crop's growth. As of now, the early planted soybeans are 54% setting and filling pods, with only 0.1% mature, while the later planted soybeans are approximately 20% in the flowering stage. Argentina's soybean quality was rated 48% poor/very poor, 39% fair, and 13% good/excellent, indicating a 2-point increase in the poor/very poor percentage from the prior week. Additionally, the soil moisture for soybeans in Argentina was rated 61% short/very short and 39% favourable/optimum, showing an 8-point decrease in the favourable/optimum percentage from the prior week.

RM seed

Today's Update-

- Today RM Seed Jaipur average prices declined by 0.9% to INR 5,825/qtl. amid new crop arrivals.
- The mustard crop in the states of Rajasthan, Uttar Pradesh, and Madhya Pradesh has reached maturity and is poised for full-scale harvesting. At present, some mandis are receiving new crops with high moisture content.

This season's record-high mustard seed sowing of 9.8 million hectare, combined with favorable weather conditions in key growing regions, is expected to result in a bumper output of mustard seed. This increase in production will reduce the country's dependence on imports for edible oils. Harvesting of mustard seed is set to begin at the end of this month, and prices are predicted to be at least 20% above the government's minimum support price of Rs 5,450/quintal. As per Agriwatch preliminary estimates mustard seed production is likely to exceed 11.2 million tonnes in the 2022-23 crop year, a 5% increase from the previous year. The higher area and productivity are expected to lead to increased oilseed production and lower demand for imported edible oils. India imports 56% of its annual edible oil consumption, valued at Rs 1.5 trillion in FY22. The country produces 44% of its domestic edible oil, with mustard being the largest contributor at 39%, followed by soybean (24%) and groundnut (7%).

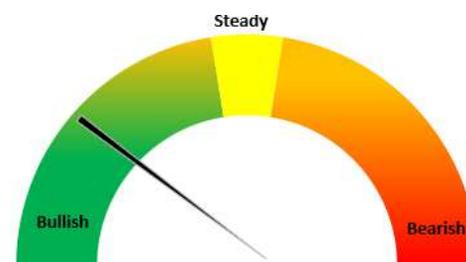

Mustard and Rapeseed			
Area Covered (Lakh Ha) as of 3 February 2023			
State	2022	2021	% Change

Groundnut:

Rajkot groundnut bold prices traded with weak sentiments and went down by 0.9% to INR 7,300/Qtl. In upcoming days, Groundnut is likely to trade in the range of INR 7,000-7,800/Qtl.

The prices of groundnut oil in Rajkot have recently experienced a sudden increase, and trading at all time high of INR 1,725 for 10 kg, which is the highest it has been in nine days. This spike in prices is due to a shortage of supply and an increase in demand. Similarly, groundnut bold prices in Rajkot have also been trading with a strong sentiment, reaching an average price of INR 6,975 per quintal, which is the highest it has been in ten days, in tandem with the groundnut oil prices. According to sources, large companies are purchasing groundnuts at higher prices, which has led to an increase in end-market prices.

The winter crops in Gujarat and Rajasthan have ended early by three months due to imports of over 50,000 tons from China and Vietnam. The state trading agency only covered 35,000 tons of the main crop with the minimum support price. The summer crop in Gujarat is expected to expand in February with higher profits for farmers. However, current exports cannot match pricing and some are reserved for sowing. Despite high kernel prices, oil prices remain strong. Spanish crops have increased supply (45,000 bags/day) with the harvest, making prices (\$1475/t) too high for exports or value addition. Prices are expected to fall due to a bumper crop supply from 4 major producing states in India, Andhra, Telangana, Karnataka and Tamil Nadu. A prolonged timeframe is anticipated for the bumper crop supply.

Sunflower:

Today, Gulbarga market went marginally up by 1% to INR 5,250/Qtl amid good demand.

As per the USDA oilseed February 2023 (monthly) report, the world total production of sunflower seed is estimated to decrease by 11% and reach 51.07 MMT as compared to 57.3 MMT in the previous year. While in Russia it is projected to increase by 3%, however a drop of 41% is estimated in Ukraine while an increase of 9% in Argentina and the exports are estimated to be up by 240% in Russia at 0.8 MMT Vs 0.2 MMT previous year while 50% up in Ukraine at 2.4 MMT Vs 1.6 MMT in previous year. The world's total ending stocks are estimated to be down by 40% at 4.8 MMT Vs 8 MMT previous year. While in Russia it is estimated to be down by 23% at 0.7 MMT Vs 0.9 MMT, and down by 61% in Ukraine at 1.8 MMT as compared to previous year at 4.6 MMT.
