Soybean Crush Margin-

Soybean net crush margin remained positive during the week under review. Weekly average soybean net crush margin decreased to INR -3407/MT as compared to INR. -347/ MT previous week amid correction in Soy meal and Soy oil prices. If Soy meal prices remain under pressure, net crush margin likely to squeeze further.

International: This week, CBOT Soybean June futures went up by 1.51% amid lag in US Soy planting.

According to USDA latest planting report USA Soybean sowing progress stood at 12% Vs 39% previous year and 24% five year average.

According to ANEC, In May'22, Soybean shipments from Brazil, the largest producer and exporter of the grain estimated to reach around 8 MMT which is 43% less than May 2021.

Currently in US, 12% of Soybean production is within an area experiencing drought.

USDA Attache in Its May'22 report has estimated India's 2022-23 Soybean production estimate at 11.5 MMT as compared to 11.90 MMT previous year. Brazil's 2022-23 Soybean production is estimated at 149 MMT Vs 125 MMT in 2021-22. However China's 2022-23 Soy crush is estimated at 95 MMT vs 89 MMT in 2021-22. While China's Soy import is estimated at 99 MMT in 2022-23 Vs 92 MMT in 2021-22.

International-

According to Stats can, Canada's canola stocks fall to lowest level since 2005.

According to USDA Attachae, 2022-23 global rapeseed supplies is projected to rise 10 percent to a record 100.5 MMT as production in Canada recovers from last year's devastating drought. Both global harvested area and production are projected to be records. Reduced carryover, the smallest in nearly 20 years, will necessitate some stock-building in the coming year and provide a measure of price support. Exports are projected to rise significantly above this year's current forecast but will fall short of the 2020/21 record volume as stock building and strong crush recovery in Canada restrict exportable supplies. Global rapeseed crush is forecast to reach a record 75.1 million tons.
