According to industry sources, Soybean crop all across India is in normal to good condition. Vegetative growth is excellent. Most crop is in flowering and pod formation stage. Soybean fields are mostly weed-free and there is no significant attack of insects or diseases. Due to excessive and continuous rains, in some districts of Maharashtra and Madhya Pradesh, water logging has been seen in low lying areas, causing yellowing of leaves and there may be some damage to crop and also yield loss in these areas. Yellow mosaic is not a major concern in any state. Overall rainfall is good in key growing districts of all the three states. Acreage in MP has declined by 9% due to acreage shift to maize and pulses. If the weather remains favourable in September and there is no sudden and significant variation in temperature and there are no continuous rains at pod filling stage or harvest time, it is expected to reap a good soybean crop this year.

International-

In **2022-2023**, canola seeded area is estimated at 8.7 Mha, down 5% from last year, according to Statistics Canada's seeded acreage survey. Harvested area is expected to be 8.6 Mha, taking into account historical abandonment rates. Based on the five-year average, yields are estimated at 2.14 tonnes per hectare (t/ha), down from 1.4 t/ha last year due to severe drought across the country. Western Canada. Yield estimates are consistent with a variety of unofficial intra-governmental and private sector estimates of yields that range between 2.14 t/ha and 2.26 t/ha.

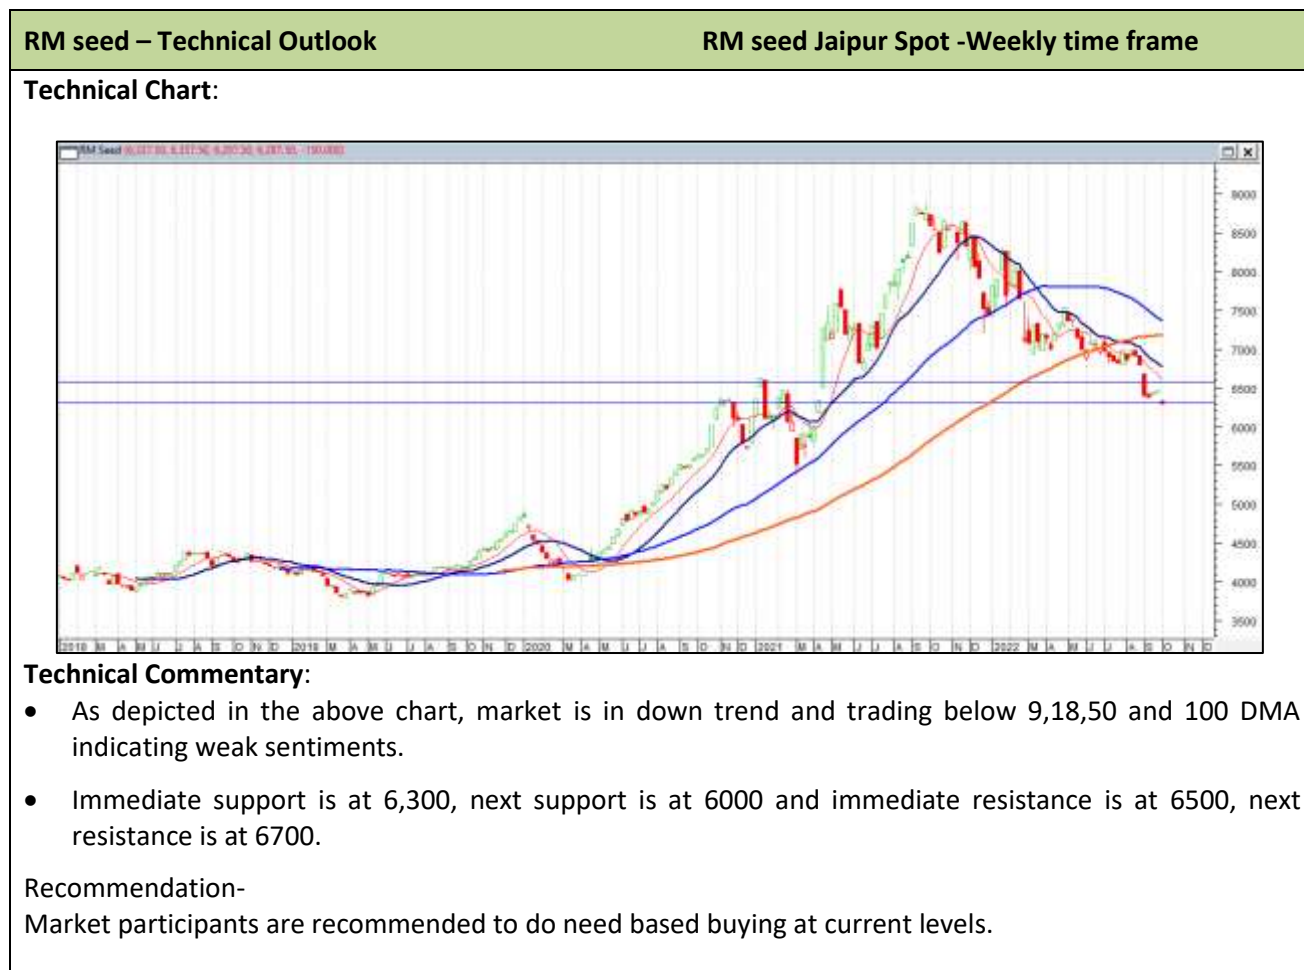

This mixed outlook is confirmed by weather conditions across western Canada that ranged from slightly dry in the west to above normal humidity, to a delayed harvest in the Eastern Prairies. Ultimately, yields will be determined by growing conditions in the future and by weather and harvest conditions. Environment Canada's three-month outlook for above-normal fall temperatures confirms yields.

Production is expected to reach 18.4 Mt, the seventh highest level on record. By comparison, the mixed production outlook is between 18.4 Mt and 19.4 Mt. and Manitoba 3.0 Mt. The overall supply is forecast to increase significantly from last year to 19.3 Mt, as higher production is tempered by tight carry-in stocks.

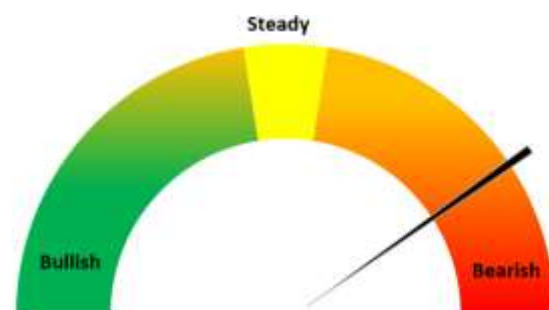

Canadian canola use should recover; expected exports increase by nearly 80% to 9.2 Mt, while the domestic crush rate increases to 9.5 Mt from 8.3 Mt last year. Carry-out stocks increase moderately to 0.45 Mt, representing a stocks-to-consumption ratio of 3%. Canola prices are forecast to decline to \$950/t on rail delivery to the Port of Vancouver, down about 10% from the 2021-22 record highs. If those predictions materialize, it will be the second highest price ever for canola.
