

### Oilseeds Domestic Fundamental

- Mixed trends are seen in Oilseeds complex today amid mixed pace of arrivals after mixed sentiments. Soybean prices increased in MP due to good demand of regular buyers despite higher supplies. The quality of new Soybean harvested crops are not so good as containing more moisture as a result prices are lower than old crops arrivals. Traders are in view that quality of new Soybean crop may decline on account of excess rainfall at maturity stage. NCDEX Soybean and Mustard October contract declined today amid profit booking phase of the market.
- As per recent released data of Ministry, the total area under Oilseeds is reported lower at 179.48 lakh hectares as on 27<sup>th</sup> Sep 2019 against 179.28 lakh hectares in the previous year in the corresponding period of time. There is a drop-in sowing of groundnuts to 39.32 lakh hectares against 40.20 lakh hectares last year. Total covering area of Soybean stood at 113.99 lakh hectares against 113.10 lakh hectares last year. Castor has been planted on 9.38 lakh hectares against 8.77 lakh hectares last year. Sunflower has been planted on 1.03 lakh hectares against 1.12 lakh hectares last year. Sesame has been planted on 13.72 lakh hectares against 14.19 lakh hectares last year, Nigerseed has been planted on 2.05 lakh ha against 1.90 lakh ha last year.
- The first Advance Estimates of production of major crops for 2019-20 have been released on 23<sup>rd</sup> Sep, 2019 by the Department of Agriculture, Cooperation and Farmers Welfare. The assessment of production of different crops is based on the feedback received from States and validated with information available from other sources. Few the major crops producing states have received good rainfall. As a result, the production of oilseeds kharif crops estimates for 2019-20 has witnessed higher than their normal production. Oilseeds production of India is placed higher by 11.11 lakh tonnes to 223.89 lakh tonnes against the production of 212.78 lakh tonnes in 4<sup>th</sup> advanced estimates for 2018-19. The estimated figure is also higher by 11.5 lakh tonnes than five years average oilseeds production.
- As on 25<sup>th</sup> Sept 2019, Nafed sold total of 2529 MT of R-19 Mustard seed holdings in Haryana and Rajasthan markets. It disposed total 16759 MT of Mustard R-19 and holds remaining balance at 10.72 lakh tonnes till date.
- Madhya Pradesh received 38% more rainfall than the average since the start of four-month long monsoon season on June 1. India is likely to receive above-average monsoon rains in 2019 for the first time in six years as seasonal rainfall continues longer than expected. Recent rainfall in MP, resulted more soybean crop damages in most of its major districts. If rain will be continued, harvesting may delay almost 10 days ahead. New crop arrivals have started in MP however quality is not so good as containing more moisture. Farmers and traders are releasing their old crops in a full pace on account of good prevailing prices. As per traders, total 20 to 25% of Soybean crops have damaged in Mandsaur, Neemuch and Ujjain districts. They expect overall 10 to 15% crop damages in MP states so far on account of heavy rainfall.
- As per IMD, India is likely to get 20% and 99% above-average rains in the weeks of Sept. 26 and Oct. 3, respectively. Rainfall may extend up to first week of October as well. Excess rainfall will be fruitful for Rabi crop sowing crops like rapeseed, groundnut etc. The IMD defines average, or normal, rainfall as between 96% and 104% of a 50-year average of 89 centimetres for the entire four-month monsoon season beginning June. As per government data, water levels in India's main reservoirs were reported at 85% of their storage capacity as on Sept. 19 higher against 74% in previous year. The average for the past 10 years is 70%.

### Oilseeds International Fundamentals

- CBOT Soybean future prices declined on Thursday.
- During this week ( September 13 to 19, 2019), US sold total 1,038,000 MT for 2019/2020, primarily for China (391,400 MT), Indonesia (95,700 MT, including 68,000 MT switched from unknown destinations), the Netherlands (69,800 MT, including 60,000 MT switched from unknown destinations), Japan (66,600 MT, including 45,000 MT switched from unknown destinations and decreases of 800 MT), and Pakistan (66,000 MT), were partially offset by reductions for unknown destinations (32,000 MT) and the Philippines (18,200 MT). Exports of 950,900 MT were primarily to China (207,400 MT), Mexico (104,400 MT), Indonesia (99,300 MT), the Netherlands (69,800 MT), and Taiwan (69,300 MT).
- Soybean planting in Brazil is very slow in absence of rain. As per state's Department of Rural Economics, only 3% of the expected area in the southern state has been planted on account of dry weather condition which is lower from 18% in previous year in the corresponding period of time. Parana is expected to sow 5.5mn hectares (13.585mn acres) of soybean in the current 2019-20 season, up by 1pc from a year earlier, Despite the current situation, Parana is likely to get 23% higher soybean output in 2019-20 versus last year, to 19.8mn metric tonnes (t). The expected gain is because a severe drought between December-January - a critical time for crop development - heavily affected production in the prior cycle.
- As per USDA recent released report, U.S. oilseed production for 2019/20 is forecasted lower at 110.2 million tons from last month with lower soybean and cottonseed production partly offset by a higher peanut forecast. U.S may get soybean yield at 47.9 bushels per acres in 2019/20 which is lower than the projection of 48.5 bushels per acres in August however it is above from 47.2 bushels per acres as projected by Reuter analyst poll. USDA reported lower production estimate at 3.63 billion bushels from 3.68 billion in August month. Soybean supplies are projected lower by 2 percent followed by less production and beginning stocks estimates.

With soybean crush and exports unchanged, ending stocks are projected at 640 million bushels, down 115 million from last month.

**Outlook:** The Indore (Plant Delivery) prices are expected to trade in the range of 4020 to 4150 in coming day. Mustard (42%) spot prices are likely to trade in the range of 4100 and 4150 per quintal ahead of a day.
