2022/23 Argentina Soybeans 16.7% Harvested vs. 45% Last Year

As of the end of last week, the harvesting progress for soybeans in Argentina was at 16.7%, showing a significant drop from the 45% recorded last year. However, there was an increase of 12.4% in the progress made during the week. Unfortunately, the yields for soybeans continue to be underwhelming, with a nationwide average yield of 1,570 kg/ha (23.3 bu/ac), representing a 1.9 bu/ac increase from the previous week. The estimate for soybean production by the Buenos Aires Grain Exchange was lowered last week by 2.5 million tons to 22.5 million.

As of April 23rd, 2023, the most recent report from the USDA reveals that the progress of soybean planting has increased by 5%, reaching a total of 9% completion. This surpasses the typical five-year average of 4% for this period in the year.

Trade Intelligence

Domestic crush margin continues to remain negative amid weak soy oil prices, However, despite negative crush margin soybean is being crushed and exported to south east Asia. During the period of October 2022 to March 2023, Total Soy meal exports went up by 327%, reaching 9.01 Lakh tonnes in comparison to the same period the previous year at 2.11 Lakh tonnes. Moreover, in March 2023 alone, Soy meal exports increased by an impressive 884% to 2.35 Lakh tonnes, compared to 0.24 Lakh tonnes during the same month of the previous year. This marks the seventh consecutive month of increased Soy meal exports, largely due to the high demand for Soy meal exports from Southeast Asia, as it has become more competitive in global markets. The demand for Soy meal exports is expected to remain strong in the upcoming months as well. Globally, record soybean crop in Brazil which is 154 MMT as compared to 130 MMT previous year and record edible oil import weighing on edible oil prices and has kept soybean prices. India's March edible oil imports jumped 7.98 percent y-o-y to 11.36 lakh tons compared to 10.52 lakh tons in March 2022, primarily due to increased CPO imports. For the oil year 2022-23, imports of edible oil between Nov 2022 and Mar

2023 stood at 69.80 lakh tons compared to 56.43 lakh tons in corresponding period last oil year, up by 24 percent. However, soy oil imports from Nov'22-Mar'23 are down by 27% to 14.63 Lakh tonnes as compared to previous year same period.

Currently, Indore Soybean plant prices is likely to remain subdued in the range of INR 5,400-5,600 range in the short run.

RM seed

Today's Update-

- The RM seed Jaipur prices went down by 1.4% to INR 5,100/Qtl amid weak demand from millers and weak mustard oil prices. Across India, arrivals of RM seed are was 7 lakh bags. It is expected that in the coming days, the price of RM seed will trade within the range of INR 5,000-5,400 per quintal.
- As per Agriwatch primary sources, upon disparity, most of the expeller are shut and only few kacchi ghani are operational. Farmers are reluctant to offload their stock at current levels in anticipation of better prices in future. And millers are buying as per their daily need for crushing.
- NAFED has reported that, as of April 27th, 2023, a total of 4.11 Lakh Metric tonnes of Mustard have been procured in four states, namely Haryana, Madhya Pradesh, Gujarat, and Rajasthan.

Groundnut:

Groundnut bold premium at Rajkot market went down by 0.7% at INR 7,290/Qtl. In upcoming days, Groundnut average prices is likely to trade range bound in the range of INR 7,000-7,800/Qtl in short run amid lower availability and good demand.

The sowing of new crops will commence in June or July. Although prices have risen recently, they have remained steady due to robust local demand. Although demand from Europe and Russia has decreased in recent times, there is regular demand from Asian countries such as Indonesia, Vietnam, and others, despite increased prices. The previous crop was not of the highest quality, yet demand remained firm. Therefore, if this trend continues, prices may continue to rise.

In China, if the weather conditions cooperate, the new crop has the potential to recover from the poor last crop. However, consumption remains volatile and weak. China had been exploring options beyond Africa for crushing, but it seems that Senegal and Sudan remain significant alternative sources of a reliable supply. A competitive option for supply and pricing can be found in the volume of oil exported from various origins, including Brazil. As the situation with China's new crop and alternative sources settles, it is possible that China may show less interest in pursuing new business.

Sunflower:

Today, Sunflower in Maharashtra/Karnataka remained stable at INR 6,200/Qtl. amid stable sunflower

oil prices.

Sesame

Today, sesame (White) sesame traded firm at INR 13,100/Qtl. amid subdued trading activities.
