According to the latest update from CONAB, the national entity responsible for commodity supply in Brazil under the Ministry of Agriculture, the progress of the soybean harvest in Brazil as of May 13th stands at 97.2%. This marks a significant increase from the previous week's rate of 95.4%. In comparison, during the corresponding period last year, the harvest rate was recorded at 96.8%.

As of April 14th May, 2023, the most recent report from the USDA reveals that the progress of soybean planting has reached a total of 49% completion vs 27% previous year same period. This surpasses the typical five-year average of 36% for this period in the year.
2022/23 Argentina Soybeans 36% Harvested vs. 64% Average.

As of late last week, the harvest progress of Argentina's soybeans for the 2022/23 season stood at 36.4%, which is lower than the 53.3% achieved during the same period last year and the 64.0% average. This marks an increase of 8.2% for the week. In the primary production regions, approximately 50-55% of soybeans have been harvested, while the southern parts of Argentina have seen a harvest progress of 20-50%, and the far northern regions have only harvested 5-10% of their soybeans. Regarding planting times, the early-planted soybeans have reached a harvest progress of 50.8%, while the late-planted soybeans have only reached 5.6% harvest progress.

As per latest USDA report, In 2023/24, India's soybean crush is expected to decrease slightly to 9.8 million tons due to a projected stagnation in supplies. The production of soybeans is anticipated to remain at 12.0 million tons. Continued growth in domestic soybean meal consumption is predicted to exert pressure on soybean meal exports to reach an 8-year low. Although soybean oil imports are forecast to increase slightly to 3.2 million tons, the demand is hampered by increased consumption of sunflower seed oil and palm oil in food use.

Currently, Indore Soybean plant prices is likely to remain subdued in the range of INR 5,400-5,800/Qtl in the short run.
