

## Oilseeds Domestic Fundamentals:

### Today's Update-

- Today, the Indore Soybean plant prices remained unchanged at INR 5,300/Qtl as compared to previous day amid good arrivals in the market.
- Year-to-date soybean prices are down by 8.62% tracking higher ending stock.

The anticipated El Nino predictions by IMD could potentially impact the oilseed yield, leading to reduced rainfall during the latter half of the monsoon season. This situation may particularly affect Maharashtra and Gujarat, which collectively account for 36-38% of the land dedicated to kharif oilseeds. Given the limited availability of irrigation facilities in these western regions, there is a concern regarding the potential impact on crop yields.

### International market update:

As of late last week, the progress of soybean harvesting in Argentina for the 2022-23 season stood at 70%, which is lower compared to 85% at the same time last year and the historical average of 85%. This indicates a week-on-week advancement of 18%. In the primary production regions, approximately 90-95% of soybeans were harvested, while in southern Argentina, the range was 40-60%, and in the far northern regions, it ranged from 25-35%. Concerning specific planting times, early planted soybeans reached a harvesting rate of 80%, whereas the later planted soybeans were at 44%.

The overall condition of soybeans in Argentina was assessed as 56% poor/very poor, 40% fair, and 4% good/excellent, as of late last week. The percentage of soybeans rated as good/excellent remained unchanged compared to the previous week. In terms of soil moisture, 49% of the soybean-growing areas were rated as short/very short, while 51% were classified as favorable/optimum. The favorable/optimum rating decreased by 3% compared to the prior week.

According to data released on Saturday, China experienced a 16% decline in its soybean imports from Brazil in April compared to the same month in the previous year. This drop in imports reflects the lingering impact of harvest delays in the South American nation, with China receiving significantly fewer supplies compared to the previous year. As the largest supplier of soybeans to China, Brazil exported 5.3 million tonnes of this oilseed, whereas the figure stood at 6.3 million tonnes during the same period last year, as reported by the General Administration of Customs.

According to the latest update from CONAB, the national entity responsible for commodity supply in Brazil under the Ministry of Agriculture, the progress of the soybean harvest in Brazil as of May 13th stands at 97.2%. This marks a significant increase from the previous week's rate of 95.4%. In comparison, during the corresponding period last year, the harvest rate was recorded at 96.8%.

As on 14th May, 2023, the most recent report from the USDA reveals that the progress of soybean planting has reached a total of 49% completion vs 27% previous year same period. This surpasses the typical five-year average of 36% for this period in the year.

2022/23 Argentina Soybeans 36% Harvested vs. 64% Average.

Currently, Indore Soybean plant prices is likely to remain subdued in the range of INR 5,200-5,800/Qtl in the short run.

### RM seed

#### Today's Update-

The RM seed Jaipur prices went marginally up by 0.5% at INR 5,250/Qtl as compared to previous day at INR 5,225/Qtl. amid steady arrivals. Across India, arrivals of RM seed were 7 lakh bags.

As per NAFED latest report, a total of 6,43,604 Metric tonnes of Mustard have been procured in four states, namely Haryana (3.47 Lakh tonnes), Madhya Pradesh (1.47 Lakh tonnes), Gujarat (0.42 Lakh tonnes), and Rajasthan (1.02 Lakh tonnes).

### International market update:

The canola area is projected to experience a slight increase to 8.8 million hectares in 2023-2024 due to favorable prices. However, this expansion is constrained by the similarly favorable prices of other crops like wheat and peas. If crop abandonment rates and yields continue to follow trends, the production is estimated to be around 18.5 million metric tons.

Both domestic crush and exports are forecasted to remain at similar levels as in 2022-23, with domestic crush predicted to be around 9.5 million metric tons and exports at 8.8 million metric tons. This projection is supported by the ongoing strong global demand for oilseeds, vegetable oils, and protein meals.

Assumptions for feed use, residue, and impurity levels are set at normal levels. Carry-out stocks are expected to slightly increase to 1.1 million metric tons, compared to 1.0 million metric tons in 2022-23 and the five-year average of 2.3 million metric tons.

The Canadian canola supply for the 2022-23 period is projected to reach 19.1 million metric tonnes (Mt), which is 22% higher compared to the previous year. This increase is primarily due to the recovery in production following the drought in 2021-22, although it was somewhat balanced by existing stocks. Canola cultivation covered an area of 8.7 million hectares (Mha) in Canada, with 8.6

Mha successfully harvested. Yields returned to nearly normal levels, averaging 2.11 tonnes per hectare (t/ha). The estimated production for the year is 18.2 Mt.

### **Mustard outlook**

Currently, RM seed is trading at three years low tracking weak demand from oil millers amid disparity due to weak mustard oil prices. As per Agriwatch primary sources, upon disparity, most of the expeller are shut and only few kacchi ghani are operational. Farmers are reluctant to offload their stock at current levels in anticipation of better prices in future. And millers are buying as per their daily need for crushing.

Jaipur mustard is likely to remain weak in the range of INR 5,000-5,500/Qtl in the short run.

### **Groundnut:**

Groundnut bold premium at Rajkot market went down by 2% to INR 7,500/Qtl. as compared to previous day at INR 7,650/Qtl. In upcoming days, Groundnut average prices is likely to trade range bound in the range of INR 7,200-7,800/Qtl in short run amid low availability and good export demand.

The A.P. Seeds Corporation and the Department of Agriculture are coordinating preparations in Anantapur and Sri Sathya Sai districts for the sale of subsidized groundnut seeds at the Rythu Bharosa Kendras (RBKs) starting from either May 25 or 26. However, the planned sales volume for the current season has decreased from 100,000 quintals in the 2022 Kharif season to 78,000 quintals. In Sri Sathya Sai district, the government intends to sell 100,000 quintals.

In 2016, 3.9 lakh quintals of groundnut seeds were sold in Anantapur district. However, over the years, the demand has been declining as farmers have shifted their focus to other crops due to the decreasing profitability of groundnut cultivation. During the 2022 Kharif season, the maximum demand in the undivided Anantapur district was slightly above 2 lakh quintals. For the current season, the government has estimated the demand to be around 1.78 lakh quintals.

According to Joint Director (JD) of Agriculture, B. Chandra Naik, a total of 15,000 quintals of groundnut seed has been prepared and made available at the RBKs thus far. Additionally, registration has been completed for more than 15,000 quintals by 13,000 farmers.

### **Sunflower:**

Today, Sunflower seed in Maharashtra/Karnataka remained stable at INR 6,200/Qtl. amid subdued trading activities.

### **Sesame**

Today, sesame (White) sesame traded firm at INR 13,500/Qtl. amid subdued trading activities.
