

Pulses Domestic Fundamentals:

- **As per latest data released by Agriculture Ministry sowing progress is lower by 5.42 % as on 08th September compared to last year for the same date.** Till 08th September 2017 total coverage area under pulses was registered at 139.17 lakh hectares against 144.84 lakh ha last year on corresponding date. Arhar acreage is down by around 9.4%, Moong acreage is down by around 2.7% whereas Urad acreage is up by around 7.3% compared to last year for the same date.
- **As per latest update overall Kharif sowing till the end of August is expected to be lower by around 0.5% compared to same period during last year.** Pulses have seen a decline in acreage most of which comes from Tur. Acreage for Tur has decreased by around 4% in Madhya Pradesh and 40% in Telangana.
- **Myanmar has issued a blueprint comprising of five strategies to help the pulses market recover from a pullback in demand from India.** India saw a surge in its domestic production which led to some changes in its import policy. According to statistics from the Ministry of Commerce, Myanmar has exported around 1.4 MMT of pulses and beans in fiscal year 2016-17, of which almost half was exported to India. Furthermore around 70% of its Black Mapte and around all of Myanmar's exportable pigeon pea was exported to India.
- **As per market sources, the new Commerce Minister intends to provide support to the Indian agriculture sector by making changes in the current policies.** As of now domestic prices of Urad, Moong, Lentil and Tur are expected to trade weak due to ample stocks and weak demand. If exports are opened it would lead to reduction of stocks which in turn would provide support to domestic prices.
- **Agriwatch has published its 1st preliminary pulses production estimates for 2017-18 kharif season.** Urad production is likely to increase slightly from 23.97 to 24.97 lakh tonne despite higher area coverage in Kharif season. Carryout is likely to increase from 8.77 to 9.74 lakh tonne. As supply side is expected to be higher, market may take downward correction further. Agriwatch expects Rs 200 dip from current level. Is is advisable to buy on dip.
- **Agriwatch published its 1st preliminary production estimate for Tur for 2017-18.** Tur production is likely to decline drastically from 38.59 to 28.76 lakh tonne this year due to lower area coverage and hot 7 dry weather condition in south India. Carryout would decline from 9.53 to 5.29 lakh tonne this year. Supply side is good. Tur market may move up once again after downward correction. Buying near 3800/3900 would be good.
- **Kharif pulses area declined by 3.82% to 137.61 lakh ha as on 1st Sept-2017.** Indian farmers had covered 143.08 lakh ha last year. Tur area declined by 18.24 percent to 42.31 lakh ha. However, it is higher than normal area of 39.24 lakh ha. Moong area too has declined to 31.25 lakh ha from 33.84 lakh ha last year. Kulthi and other pulses area too have declined to 38.01 and 2.94 percent from last year. However, Urad has been good performer and area under urad has increased by 21.63 percent from 34.36 to 41.80 lakh ha.
- **Chana market is bound to move up once again as fundamental remains strong. Stockists are active.** Sellers are unwilling to sell at current level. Stock is in strong hands while Australian crop size may be lower than normal expectation due to current rough weather conditions. Australian desi chickpeas quoted at \$900 Sept Contract.
- **Tur market is likely to stay steady to slightly firm. There is plenty of Tur stock in market.** Stock limit, expectation of lower production size (28/29 lakh tonne) this year and govt's intention to drag market up to the level of MSP would continue to support Tur market. It may trade in price band of Rs 4100 to Rs 4300 this week. Selling through central pool would restrict market to move like Chana. Buy and sell would be good strategy for Tur.

Pulses International Fundamental:

- **Market sources says that production of Peas, Lentils and Chickpeas are likely to decline in Canada** from normal expectation this year. Latest report of Agriculture and Agri-foods Canada' hits peas production would decline by 17.3 percent to 40 lakh tonne in 2017-18 (Aug- to July) due to lower coverage area and below normal yield. Lower production size would drag down supply side to 42 lakh tonne which is almost 18 % lower than last year. As carryout is expected to decline average price for peas has been revised up to \$208 to \$310 for the year. It is up by \$5 per T from July projected price.
- **Masur production in Canada is likely to decline by 1.2 MMT to 27.3 MMT in 2017-18.** Canada had produced 32.5 lakh tonne masur in 2016-17. Average price of masur was hovering at \$725-\$750 in July. It is higher by \$175 from last year. It was \$575 per T last year. As crop size is lower, carryout is expected to decline from 3.25 to 2 lakh tonne this year.
- **Chickpeas production in Canada would decline slightly from 1.10 to 1.05 lakh tonne in 2017-18.** Average price of Chana is expected to decline from \$1000 to \$960-\$980 per T. Prices would decrease due to higher supply side in global market and bumper crop production in India last year. India is a major buyer of Masur from Canada and it imported around 6 lakh tonne masur last year. As availability is higher this year in India import would decline.
- **Dry and hot weather in US and Canada would continue to affect yield of standing crop of Lentils.** Increasing fear of yield loss is being reflected on price and it has improved in last two weeks. Firmness may continue. However, quality is believed to be good. Harvesting may end early than normal time schedule. Local farmers have restricted selling and it may boost up prices in coming weeks.
- **Chickpeas area in Australia has been forecast up by 2.99 % from previous year to 1101 thousand ha for 2017-18 crop.** It was 1069 thousand ha last year. However, production estimate has been decreased by 23.62 % to 14.16 lakh tonne against 18.54 lakh tonne last year. The main reason behind lower production forecast is mainly attributed to bad weather for planting. Australia had achieved highest yield last year due to favorable weather condition throughout the season.
- **Lentils area in Australia is expected to increase by 26 % to 385 Thousand Ha in 2017-18.** However, production size has been revised down to 5.30 lakh tonne. Australia had produced 830 lakh tonne Lentils last year. Bad weather is bound to affect lentils yield in Australia in 2017-18. Weather condition is still alarming and reduction in yield seems very much in sight.
- **Field Peas Area in Australia has been forecast down by 4.85 % to 219 thousand Ha for 2017-18 crop** due to lower price realization and bad weather condition in producing states. Peas production estimate has been reduced from 415 to 257 thousand T. Australia had realized better yield due to congenial weather throughout the season. Canada's dominance in peas export at cheaper price and ample availability in India have affected global price of peas. So bad weather and weak demand/price encouraged farmers to lower peas area.
- **Pulses season (crop year) in Canada starts in August. Before starting the season.** Canada has revised down lentils production estimate from 31 lakh tonne to 28 lakh tonne now for 2017-18 season. According to the latest update by AAFC Canada has produced 32.48 lakh tonne Lentils in 2016-17. As production was at higher side, its export figure in current MY is expected to touch at 23 lakh tonne. India as usual emerged as major buyer for Canadian Lentils.
- **AAFC (Canada) has revised down peas production estimated from 42.50 to 41.50 lakh tonne for 2017-18.** In last one month production estimate has been revised down by 1.50 lakh tonne for next season crop due to lower prevailing price and weak demand from India and Pakistan. Canada had produced 48.36 lakh tonne peas in 2016-17. Local farmers may opt for other lucrative crops if prices continue to hover at lower level.
- **Peas import from Ukraine to India is bound to increase over 50 % to 6.5 lakh tonne in 2017-18** as bumper production seems very much on the card. Ukraine produced 7.45 lakh tonne peas last year.
- **As per latest update By Canadian Market experts Chickpeas production in Canada in MY 2017-18 may increase from 82,000 MT to 1.45 lakh tonne in 2017-18.** Area coverage under Chickpeas too is likely to increase from 68,000 ha to 75,000 ha.

Overall Outlook: - Pulses market may trade steady to weak. Profit booking is expected.
