

Pulses Domestic Fundamentals:

- **Pulses market are likely to trade steady to slightly weak despite decision of opening up pulses** (Tur,Urad & Moong dal export).The reason behind it selling from central pool stock.Food Minister Ram Vilas Paswan said that government is trying to dispose of the dals as pulses have short self-life. Around 8 to 10 lakh tonne out of 18 lakh tonne pulses from central pool need to be disposed off before new procurement season starts.It will pressurize market of Tur ,Moong and Urad to some extent. Chana and Masur may recover after slight downward correction. As govt would start procuring Kharif pulses from 2nd fortnight of October, so Agriwatch expects recovery in market from 20th Oct.
- **If govt. allows Chana and Masur dal export as demanded by pulses associations** and assures trades community not to roll back from export decision, pulses market might trade near MSP next year. Sowing of Chana and Masur would start from mid-October. So its price trend would depend on area coverage and Prices in Australia and Canada. In current scenario pressure might be seen on Pulses market in the near term.
- **South Indian dal millers imported 1305 containers pulses at Chennai port during 2nd half of August**(16 to 31st Aug-2017),higher by 17.25 % from 1113 containers imported during 1st fortnight of August. Out of total 1305 containers share of Black Mapte increased by 6.11 % to 868 containers. However, Chickpeas import decreased by 10.61 % to 118 containers during the same period.Tur Whole import increased by 82.35 % to 186 containers from 102 containers. Considerable increase was seen in Moong import in the same period. It increased from 2 to 41 containers. There was no import of Lentils like previous fortnight. Yellow peas import decreased from 21 to 18 containers. Brown Eye Bean import too increased from 18 to 64 containers. The rest were Kaspera peas and Pea beans.
- **Govt has removed export of Tur, Moong & Urad dals from prohibited list from immediate effect.**It wants to ensure remunerative prices for pulses farmers. Currently, only organic pulses and Kabuli Chana are out of export prohibited list. However,green signal from APEDA is awaited now.Most probably APEDA will give her consent soon.Opening of the export of pulses will help the farmers to get remunerative prices and encourage them to expand sowing area in coming season'. It's a delayed but welcome step.
- **Kharif pulses sowing have entered in the last phase now. Indian farmers have covered 140.38 lakh ha** as on 15.09.2017 against 145.55 last year and year's normal of 105.58 lakh ha.Area coverage is 3.55 % lower than last year. Almost all pulses area has declined except Urad this year in kharif season.Tur area declined by 17.92 % to 43 lakh ha(52.39 last year) against normal of 39.24 lakh ha.Moong area declined by 8.02 % to 31.63 lakh ha(34.38 last year) against normal of 23.41 lakh ha. Kulthi area declined by 4.24 % to 0.61 lakh ha against normal of 2.40 lakh ha.However, Urad performed well against all expectation. Its area increased by 21.40 % to 42.65 lakh ha(35.13 lakh ha)against normal of 24.79 lakh ha.If we see overall decline,it is minor decline as total area is higher by 32.96 % from normal area.
- **SEBI is considering lifting a decade old ban from Tur and Urad futures** as bumper harvest drove the prices down which led the government to procure intensively in order to avoid distress sales by farmers. As of now no final decision has been made but the ban is still under review.
- **As per latest update overall Kharif sowing till the end of August is expected to be lower by around 0.5% compared to same period during last year.** Pulses have seen a decline in acreage most of which comes from Tur. Acreage for Tur has decreased by around 4% in Madhya Pradesh and 40% in Telangana.
- **Agriwatch has published its 1st preliminary pulses production estimates for 2017-18 kharif season.** Urad production is likely to increase slightly from 23.97 to 24.97 lakh tonne despite higher area coverage in Kharif season. Carryout is likely to increase from 8.77 to 9.74 lakh tonne. As supply side is expected to be higher, market may take downward correction further. Agriwatch expects Rs 200 dip from current level. Is it advisable to buy on dip.

- **Agriwatch published its 1st preliminary production estimate for Tur for 2017-18.** Tur production is likely to decline drastically from 38.59 to 28.76 lakh tonne this year due to lower area coverage and hot & dry weather condition in south India. Carryout would decline from 9.53 to 5.29 lakh tonne this year. Supply side is good. Tur market may move up once again after downward correction. Buying near 3800/3900 would be good.

Pulses International Fundamental:

- **As per latest update by USDA Peas production in USA would decrease by 45% to 697,043 tonne.** Rough weather condition has impacted yield of all pulses. Besides, hot and dry weather lower area coverage (17%) to 1.15 million acres contributed to lower overall crop size. Average yield has decreased by 703 pounds per acre to 1383 pounds per acre. It would be the lowest yield after 1996. Harvesting is almost over now in Montana and North Dakota. Crop faced extreme moisture stress from growth/flowering stage to harvesting stages.
- **Rough weather in the US has affected Lentils yields too. The latest estimate shows that Lentils production may decrease by 41 % to 3.38 lakh tonne against 5.75 lakh tonne in 2016.** Despite 19% higher area coverage (1.11 million acres) from last year, yield is bound to decrease to 733 pounds per acre. Major loss has been seen in North Dakota and United States. Harvesting is almost over now in Montana. It is still on in North Dakota. Due to rough weather condition yield has decreased to record level not seen since 1998.
- **Chickpeas production in Australia is expected to decrease by 35.92 % to 11.88 lakh tonne in 2017-18** from record 18.54 lakh tonne 2016-17. Despite 4.43 % higher area coverage production is bound to decrease drastically due to hot and dry weather condition prevalent in the major growing regions. Chickpeas area increased from 1052 to 1099 thousand ha in 2017-18.
- **Lentils production in Australia too is bound to decline from 8.3 to 4.19 lakh tonne in 2017-18.** It is almost 50 % down from last year. Lentils area was reported higher by 16 % 3.55 lakh ha. Due to rough weather condition Lentils production would decline to 4.19 lakh tonne. Even field peas production is bound to decline by 32.47 % to 2.8 lakh tonne in 2017-18. Australia had produced 4.15 lakh tonne field peas in 2016-17.
- **Canada dry pea area is expected to decline by 3.44 % to 16.56 lakh ha in 2017-18.** Yield is expected to decrease by 14.63 % to 2.45 T per ha. Thus total production is expected to decline from 48 lakh tonne to 40 lakh tonne in 2017-18. As production is bound to decline, export volume too is expected to decrease from 38 to 32 lakh tonne in 2017-18. Total supply in Canada is likely to decrease from 50 lakh t to 41.50 lakh Tonne. Price of pea may rule in the range of \$280 to \$310 per T in 2017-18.
- **Lentils area in Canada is Bound to decline from 23.72 to 17.43 lakh ha in 2017-18.** It is lower by 23.54 % from last year. Yield is expected to improve from 1.45 to 1.55 t per ha. Total production is expected to decline by 16 % from 32.48 to 27.25 lakh ha. As production would decline, total supply would decline by 10.43 % to 30.35 lakh t. Average price in 2017-18 may rule in the range of C\$720 to 750 per T.
- **Chickpeas production in Canada would decline slightly from 1.10 to 1.05 lakh tonne in 2017-18.** Average price of Chana is expected to decline from \$1000 to \$960-\$980 per T. Prices would decrease due to higher supply side in global market and bumper crop production in India last year. India is a major buyer of Masur from Canada and it imported around 6 lakh tonne masur last year. As availability is higher this year in India import would decline.
- **Dry and hot weather in US and Canada would continue to affect yield of standing crop of Lentils.** Increasing fear of yield loss is being reflected on price and it has improved in last two weeks. Firmness may continue. However, quality is believed to be good. Harvesting may end early than normal time schedule. Local farmers have restricted selling and it may boost up prices in coming weeks..
- **Pulses season (crop year) in Canada starts in August. Before starting the season.** Canada has revised down lentils production estimate from 31 lakh tonne to 28 lakh tonne now for 2017-18 season. According to the latest update by AAFC Canada has produced 32.48 lakh tonne Lentils in 2016-17. As production was at higher side, its export figure in current MY is expected to touch at 23 lakh tonne. India as usual emerged as major buyer for Canadian Lentils.

- **AAFC (Canada) has revised down peas production estimated from 42.50 to 41.50 lakh tonne for 2017-18.** In last one month production estimate has been revised down by 1.50 lakh tonne for next season crop due to lower prevailing price and weak demand from India and Pakistan. Canada had produced 48.36 lakh tonne peas in 2016-17. Local farmers may opt for other lucrative crops if prices continue to hover at lower level.
- **Peas import from Ukraine to India is bound to increase over 50 % to 6.5 lakh tonne in 2017-18** as bumper production seems very much on the card. Ukraine produced 7.45 lakh tonne peas last year.

Overall Outlook: - Pulses market may trade steady to firm.

Canada Lentils Production Estimate

Canada Lentils(Crop year is August-July.)	2015-2016	2016-2017[f]	2017-2018[f]
Area seeded (kha)	1,633	2,372	1,783
