

Pulses Domestic Fundamentals:

Today's Update:

- **Cash pulses market traded mixed today. Demand at higher level got affected from millers end. However,** stockists remained active for tur, urad and lentil. Chana and moong dal millers are in wait and watch mode due to ample stock available in central pool. Despite bad rabi crop prospects supply side seems balanced in chana, urad and moong. Urad may move up again if decision regarding stay order on import goes in favor of commerce ministry. Next hearing is on 17th Dec.
- **Cash chana market traded almost unchanged at previous level despite futures traded lower. There was** no actual physical trade in Delhi market. Buyers preferred to wait for bulk buying despite firm inner tone. As per Agriwatch preliminary estimate chana production this year would decrease from 94.56 to 83.32 lakh tonne to be marketed in 2019-20, starting from Mar-2019. If moisture stress prevails in the field and area declines by 10 % (likely), it would support chana price at current level. The only price capping factor is higher stock (23-24 lakh tonne) in central pool. In new season govt would procure chana at MSP of Rs4620 per qtl. So, prices of chana is unlikely to decrease from current level. If 1 million MT stock is retained for buffer stock, Nafed would not sell more than 12-14 lakh tonne in Dec, Jan & Feb-2019. In Delhi market chana was quoted at Rs4600-4650 per qtl.

Previous Update:

- **Rabi pulses area decreased by 12.40 % to 101.90 lakh ha against 116.33 lakh ha last year as on 30 Nov-2018.** Chana area is running behind by 15.13% to 70.46 lakh ha against 83.02 last year till date. Farmers have covered 6.83% lower area under lentil so far to 12.68 lakh ha against 13.61 lakh ha last year. Pea area is lower by 6.62 to 6.63 lakh ha. Urad area is running behind by 7.06 % to 2.37 lakh ha against 2.55 lakh ha last year. Area too is running behind by 13.64% to 0.76 lakh ha against 0.88 lakh ha so far. Overall area may decline further as fields are facing moisture stress and it would impact final rabi crop size. See sowing table on page no 3
- **Lower tur crop size (36.21 lakh tonne) against 38.67 lakh tonne last year may help** market to move further up amid active buying in Gulberga at Rs4650-4750 from new crop. Arrival in Gulberga was recorded at 300 bags and it would pick up further from 15th Dec. Stock in central pool too has decreased considerably and supply –demand side seems balanced right now. Govt's procurement drive is expected from 20th Dec and it would push tur price further up. Millers are active sensing shortfall next year. Myanmar has increased quotes again by \$20 to \$570 per MT basis Indian port. Demand is good for dal and selling from private trades remains restricted ahead of new crop. Overall, sentiments remain firm. India cannot import beyond 3 lakh tone upto Mar-2019. It has already imported over 2 lakh tone tur from Mar 2018 to Sep-2018. So, importers can import only 1 lakh ton more beyond March-2019. So Agriwatch expects cash market to move up from current level.
- **Urad cash market is likely to trade up once again as buyers are active amid procurement by govt.'s agencies.** Stock of urad at Indian port is down considerably and bulk import is not possible as stock in Burma is said to be lower and quotes are increasing continuously there. Burma is offering urad FAQ and SQ at \$630 and \$770 per MT basis Cif at Indian ports. Urad price in Latur and Udgir line is higher and it is being consumed locally. So supply is tight in other markets too. Even supply from Katni line is lower than normal expectation. It would continue to support cash market in coming weeks.
- **Moong market stayed steady due to lower supply in the cash market. Farmers and stockists** are unwilling to sell stock at current price amid ongoing procurement drive in various states. Besides, New crop of moong from rabi season is unlikely to be available before Feb. Cost of moong from China and Uzbekistan is higher at around Rs 7600-7700 and Rs 6600-6700 per qtl respectively. Availability of moong in Myanmar too is lower. So millers are active in local market. However, Agriwatch expects market to decrease by Rs100-150 from current level as mill may restrict buying for some times. They have fulfilled their immediate requirements. Ranchi line moong is being traded at Rs5200-5250 while Jodhpur line is being traded at \$700. Moong in Jaipur market is being traded at Rs 5500. Overall tone in moong market remains firm. Myanmar too has increased Cif quote from \$750 to \$760 in last one week. Availability in Burma is lower too. Overall sentiments remain firm.
- **India imported total 19707.72 MT tonne chickpea at an average Cif of \$519.03 per MT in October-2018.** It is slightly higher than 18329.3 MT imported in Sep-2018. Importers had imported chickpeas at an average price of \$597.45 MT in Sep. Average imported price declined in Oct from \$597.45 to \$519.03 per MT. Total Chickpea/dal import from March to Oct was registered at 67209 MT. Against it chickpea export was registered at 244745.9 MT from Mar to Oct-2018. India exported 20570 MT chickpea/dal in Oct against 26194.87 MT in Sep. For other pulses see table given below at page no.3.

Pulses International Fundamental:

Today's Update:

- **Lentil production in Canada is expected to decrease from 25.59 lakh tonne to 22.30 lakh tonne** for MY 2018-19. Despite lower production total supply is expected to increase from 29.09 to 31.27 lakh tonne due to better yield at 1.48 tonne per ha against 1.44 tonne per ha last year. Despite weak demand from India export is expected to increase from 15.40 to 19 lakh tonne in MY 2018-19. Domestic consumption has been pegged at 4.2 lakh tonne, same as last year. Carryout and stock would decrease from 8.76 to 7.35 lakh tonne. Average price for the year has been projected at \$340-370 per MT against \$475 per tonne last year. Harvested area has been pegged at 1509 thousand ha.
- **Lower area coverage in Saskatchewan and Alberta which contributes 96% pea production in Canada**, may reduce pea production by 9% to 3.7 million tonne for MY 2018-19. In Canada, season starts from 1st August. Yellow pea production has been estimated at 2.9 million tonne while green pea production may increase 0.6 million tonne. Other pea production has been pegged at 1.85 lakh tonne. Weak Indian demand would affect export volume and it may decrease to 2.6 million tonne in 2018-19. From Aug to Sep China, B, desh and US has been main buyers for Canadian pea. Carryout stock is expected to increase from 6.6 to 9 lakh tonne for 2018-19. Average price is expected to decrease from \$265 to \$230-60 per MT in current MY.

Previous Update:

- **Global chickpea market continued to trade slightly weak due to ample availability of stock in exporters hand** against actual demand from importers. Quality issue with Canadian and some issues related to crop in Argentina could not support medium calibre chana. However, some extra demand emerged from the United States and other origins for better quality. As per Saskatchewan Agriculture estimate 58% of the province's chickpea crop will grade No 1 Canada, 37% No 2 Canada, and 5% No 3 Canada or worse. Last year, roughly 78% chickpeas graded No 1 and 22% No 2 in Canada. This means availability of poor quality crop would be higher.
- **USDA production estimate for this year's crop is at higher side at 5.71 lakh MT. It is around 80% higher than last year** when chickpea production was registered at 3.16 lakh MT. Yield and area too are higher this year with favorable weather condition. Farmers had planted a total of 853,146 acres of chickpeas this year. Out of total acreage Kabuli share was 632,482 acres, small chickpea 209,338 acres & desi 11,326 acres.
- **Agriculture department of Canada has estimated 1% higher yield than Statistics Canada. the major difference has been seen in lentil production** fig. Unofficial estimate points 23.7 lakh MT production for lentil, which is almost 6% higher than Statistics Canada. Harvesting of all pulses is almost over now. Efforts of more export to other countries than India might be seen in coming weeks. Higher production estimate may cap uptrend in global lentil market in coming weeks
- **As per USDA, dry bean production in U.S. is expected to fall by 6 percent to 1.23 MMT even after 20 percent decrease in sowing** as yields are expected to be higher compared to last year. Dry bean exports from U.S. have registered a 12 percent increase during September'17- June'18 compared to September'16- June'17. Top destinations included Mexico, Canada, Italy and UK.
- **Chickpeas export from Canada increased by 16% from 108 to 116 thousand MT for 2017-18** due to aggressive buying by turkey and EU. Despite India being out of global market carryout remained almost unchanged at 1 thousand MT like previous year. The average price decreased slightly from \$1000 to \$950 per MT in 2017-18 due to tight global side side. This year (for 2018-19) production is expected to increase sharply due to higher area. Major chickpeas growing states are Saskatchewan and Alberta where maximum chickpeas are produced, almost 90 percent. Total supply is expected to increase from 150 to 273 thousand MT due to higher production estimate in 2018-19. Import is expected to remain at lower level and it may decrease from 47 to 8 thousand MT this year.
- **With bearish USDA crop report global chickpea market traded under pressure. However, lower crop size in Australia & Tanzania** may support chickpeas market in coming weeks. Production of chickpea in US may jump to a record level this year. Area under chickpea in US has increased from 623800 acres to 822,000 acres. The USDA reckons farmers planted 211,200 acres of small chickpeas, up from 179,500 last year; and 608,500 acres of large, compared to last year's 439,300 acres. Higher area in US can make up lower crop size in Australia to some extent. Fundamental for chickpea has started changing into positive now. It may continue to support global chickpea market.

Weekly Outlook: -Pulses are likely to trade steady to slightly firm.

Rabi Sowing as on 30th Nov-2018:
