

## **Pulses Domestic Fundamentals:**

### **Today's Update:**

- **The pace of chana sales by Nafed remains slow and ample availability in central pool stock is still capping the firm momentum** despite likely lower crop size this year. Nafed has sold 67410MT in AP till 10th of Dec-2018 and is still left with 24563.41 MT chana. Similarly, in Telangana it has sold 35712MT chana and is left with 14288MT. In Karnataka it has sold 89830MT so far and is left with 44387.76MT. In Mah it has sold 32147.01 MT and is left with 149360.33MT chana. There is no sale in UP and total procured stock of 14062.24 MT is still left. In MP it has sold 13020MT so far and is left with massive stock of 1568430.52MT. In Rajasthan it has sold 58923MT so far and is left with 520945.72 MT. So out of total procured quantity of 2724051.17 MT, Nafed has sold 337440.01 MT and is left with massive stock of 2386611.16MT.
- **So, Nafed has to sell 2.38 million tonne before new crop hits (likely from mid Feb) the market.** If Nafed decides to retain 1million tonne as buffer to take care of impending short crop, availability for next 2.5 months would be around 1.3million tonne. It would not allow market to go for any spike. However, in new season after peak arrival season stake holders may get better price over Rs 5000. They can even get more if weather remains unfavorable in Jan & Feb. However, holding period for old crop would increase and with it cost too. So it is good to sell chana on rise of Rs 200 to Rs300 and release stock before new crop hits. Stake holders should buy new crop in peak arrival season and hold it.

### **Previous Update:**

- **Tur market moved up on demand from millers at lower level. In Delhi market tur is being** traded at Rs 4500, up by Rs 50. In Mumbai market it is being traded at Rs4400. If it is loaded for Delhi, it would cost around Rs4700. Currently in Delhi old stock is being sold and it is depleting fast. As soon as old stock is consumed and loading from Mumbai starts, tur price would increase by Rs 300 to 400 from current level. Stake holders should buy at current price. In Mumbai sellers are unwilling to sell below 4300-4350. Arrival is yet to pick up and is expected to increase in the second half. Crop size is lower around 36 lakh tonne. If moisture stress continues, yield of late sown crop is feared to decline and final size of crop might be even lower. Buyers are active and procurement on MSP is yet to start. So, Agriwatch expects market to move up toward MSP level soon. Buying at current level seems riskless.
- **This year moong arrival in major markets has not been upto the mark due to weather affected crop.** Quality too was not very convincing. Availability of quality crops is lower. Arrivals are decreasing continuously in all major markets. There is no arrival in Kishangarh-Kekri line now. Parity for moong if loaded from Shekhawati line comes to above 5500. Moong from Jodhpur line delivered price comes to Rs 5900. Demand for moong dal is weak right now and despite weak demand, moong price is being traded at higher level. Slight improvement in dal demand may drive moong price up once again. Import is not possible as there is no parity from Myanmar. New moong is not expected before March end. So, market has to rely on local and central pool stock. Agriwatch expects market to stay steady to slightly firm. Demand would remain major price driving factor in coming months.
- **Urad market is likely to trade steady at current level. Market participants are eyeing on Madras High court decision over** import. Govt is not in favor of importing Urad beyond set target. Next hearing is on 17th Dec. Higher import against set quantity (1.5 lakh tonne per year) has impacted market sentiment negatively. Urad cash market is expected to move up once again as stock in north and central India is much lower. SQ are being traded at Rs 5525 per qtl. in Delhi market. However, higher availability of green vegetables in next two months may cap any spike in cash urad market despite lower crop size and likely poor rabi crop. Overall, sentiment remains firm for Urad market.
- **Planting of masur is almost over. Due to moisture stress, percentage ratio of germination seems below** average in MP and UP. Comparatively lower dew at night and prevailing foggy condition due to pollution are not congenial to standing crop. Moisture stress in the field is hampering plant growth that may ultimately affect yield. Pace of import too is very slow. So lentil market is expected to move up from current level. At 40% duty, it costs around Rs4000-4050 at port. However, ample stock in central pool would not allow market to jump suddenly. So normal firmness might be seen in coming weeks.

- **Rabi pulses area decreased by 10.33 % to 113.69 lakh ha against 126.78 lakh ha last year as on 07 Dec-2018.** Chana area is running behind by 13.12 % to 77.27 lakh ha against 88.94 last year till date. Farmers have covered 5.55 % lower area under lentil so far to 13.95 lakh ha against 14.77 lakh ha last year. Pea area is lower by 4.45 % to 7.48 lakh ha. Urad area is running behind by 17.25 % to 2.98 lakh ha against 3.61 lakh ha last year. Moong area too is running behind by 6.50 % to 1.14 lakh ha against 1.22 lakh ha so far. Overall area may decline further as fields are facing moisture stress and it would impact final rabi crop size. See sowing table on page no 3

#### **Pulses International Fundamental:**

##### **Today's Update:**

- **Global Chickpea market remains almost unaffected from final production data in Canada.** USDA data is about to be published and market participants are waiting for USDA data. Canada has produced 311,300 metric tons chickpea from 4.43 lakh acres of land. It had produced 118,600 MT last year from 2.09 lakh acres of land. Major increase was reported from Saskatchewan where production increased from 95,600 to 276,500 MT. In Alberta production has increased from 23,000 to 34,600 MT. Other states are minor producers and have grown around 200 MT.
- **As per Canadian Grain Commission update Canada has exported 1,82,800 MT field pea in the month of Oct-2018.** It does not include lentil exported in containers from non-reporting terminals. This lifted bulk export loadings for field peas to 592,3 MT so far this marketing year, down 30% from the 845,600 loaded during the same period in the previous marketing year.
- **As per Canadian Grain Commission update Canada has exported 22,700 MT lentils in the month of Oct-2018.** It is higher by 4500 MT exported in Oct-2017. Canada has exported total 1,25,400 MT lentil in current MY. It was 88,000 MT last year till date. Improvement in export sales is likely to continue in Nov & Dec too. However, bulk loading is said to be lower than Sep-2018.

##### **Previous Update:**

- **Lentil production in Canada is expected to decrease from 25.59 lakh tonne to 22.30 lakh tonne for MY 2018-19.** Despite lower production total supply is expected to increase from 29.09 to 31.27 lakh tonne due to better yield at 1.48 tonne per ha against 1.44 tonne per ha last year. Despite weak demand from India export is expected to increase from 15.40 to 19 lakh tonne in MY 2018-19. Domestic consumption has been pegged at 4.2 lakh tonne, same as last year. Carryout and stock would decrease from 8.76 to 7.35 lakh tonne. Average price for the year has been projected at \$340-370 per MT against \$475 per tonne last year. Harvested area has been pegged at 1509 thousand ha.
- **Lower area coverage in Saskatchewan and Alberta which contributes 96% pea production in Canada, may reduce pea production by 9 % to 3.7 million tonne for MY 2018-19.** In Canada, season starts from 1st August. Yellow pea production has been estimated at 2.9 million tonne while green pea production may increase 0.6 million tonne. Other pea production has been pegged at 1.85 lakh tonne. Weak Indian demand would affect export volume and it may decrease to 2.6 million tonne in 2018-19. From Aug to Sep China, B, desh and US has been main buyers for Canadian pea. Carryout stock is expected to increase from 6.6 to 9 lakh tonne for 2018-19. Average price is expected to decrease from \$265 to \$230-60 per MT in current MY.
- **USDA production estimate for this year's crop is at higher side at 5.71 lakh MT. It is around 80 % higher than last year when chickpea production was registered at 3.16 lakh MT.** Yield and area too are higher this year with favorable weather condition. Farmers had planted a total of 853,146 acres of chickpeas this year. Out of total acreage Kabuli share was 632,482 acres, small chickpea 209,338 acres & desi 11,326 acres.
- **As per USDA, dry bean production in U.S. is expected to fall by 6 percent to 1.23 MMT even after 20 percent decrease in sowing as yields are expected to be higher compared to last year.** Dry bean exports from U.S. have registered a 12 percent increase during September'17- June'18 compared to September'16- June'17. Top destinations included Mexico, Canada, Italy and UK.
- **Chickpeas export from Canada increased by 16% from 108 to 116 thousand MT for 2017-18** due to aggressive buying by Turkey and EU. Despite India being out of global market carryout remained almost unchanged at 1 thousand MT like previous year. The average price decreased slightly from \$1000 to \$950 per MT in 2017-18 due to tight global side. This year (for 2018-19) production is expected to increase sharply due to higher area. Major chickpeas growing states are Saskatchewan and Alberta where maximum chickpeas are produced, almost 90 percent. Total supply is expected to increase from 150 to 273 thousand MT

due to higher production estimate in 2018-19. Import is expected to remain at lower level and it may decrease from 47 to 8 thousand MT this year.

**Weekly Outlook:** -Pulses are likely to trade steady to slightly firm.

**Rabi Sowing as on 07<sup>th</sup> Dec-2018:**

Rabi Pulses Progressive Sowing Area Coverage Till 07.12.2018 ( Area in Lakh Ha)
