

Pulses Domestic Fundamentals:

Today's Update:

- **Import time line for Masur too extended from 31st October to 31st Dec-2020, at reduced duty.** It would increase the supply in the market and prices should trade lower in cash market as import flow would increase over 9 lakh MT now. Masur price may decrease near to MSP level in coming weeks. Sowing in MP and U.P. continues and this year lentils area may increase by 5 to 10 % due to higher prevailing prices. Masur in Mumbai market may come down to 4900-5000.
- **Moong cash markets continued to trade lower taking cue from other pulses. Demand at higher level got stuck and millers have restricted buying at current level.** Fear of lower yield remains supportive for moong cash market. Yield is said to be lower by 5 to 7 % from last year due to heavy rains during flowering and maturity stages. As prices are ruling higher, rabi area is expected to increase by 10 % this year. Weak sentiment may prevail this week too.
- **The Director General of Foreign Trade (DGFT) has extended the import time line for tur import** from 15th Nov to 31st Dec-2020. The notification regarding this has been issued on 26th Oct-2020. Notably, the quota of 4 lakh MT of tur was allocated equally, or for the quantity applied, whichever is lower, only amongst the eligible and verified applicants and validity of the license issued for import of tur was up to 15th Nov-2020.

Previous Update:

- **Tur crop in Myanmar is expected to hit local market by Dec end. Arrival gap between India and Myanmar is 15 to 20 days.** Full-fledged arrival in India is expected in Jan-2021. Experts say that Myanmar may harvest 2 to 2.25 lakh MT tur this year. Old stock in Myanmar is said to be 1 to 1.5 lakh MT as per market sources. So, availability in Myanmar is lower than Indian requirement. So CiF quote is bound to increase in Myanmar.
- **Urad stocks, imported or desi, with mills and markets are said to be lower than normal expectation** at this point of time. Even farmers have restricted selling sensing strong inner tone. Import licenses for 1.5 lakh MT have been issued but importers are unwilling to import at higher prices from Myanmar. Stocks of urad got too has decreased to negligible level. Stocks of small grain urad are in strong hands and so they are dominating the market and quote higher prices. Right now prices are steady because of weak demand for dhoya and chika dal. As soon as demand improves, prices may move up again by Rs 200-300 per qtl. Nafed may increase sale to augment supply in the market.
- **Frequent changes in import duty for masur have affected normal course of trade for masur traders.** Notably, govt. had cut import duty second time from 30 to 10% and it will remain effective till 31st Oct-2020. Due to lower import duty volume of import increased and India imported around 2.75 lakh MT in Aug and Sep while Agriwatch expects 1 to 1.25 lakh MT more import in Oct-2020 before deadline of 31st Oct. One vessel is expected by the end of this month and due to time limitation now it is being diverted from Mundra to Kakinada. If time extension is not given, import volume would decrease and price may move up again. Under prevailing condition when planting is on, govt would not extend time line for import on reduced duty.
- **Demand for dal at higher level got stuck and mills are buying pulses based on their immediate needs.** It has pressurized market to some extent. However, with likely improvement in demand prices may recover again. Pressure is higher on chana and lentils. Recovery is expected in Nov. Chana and masur may dip by Rs 100 more from current level. There is weak demand for urad and moong too as mills are unwilling to buy at this level. Nafed Mumbai has decided to sell 1 lakh MT tur from its stock amid likely higher volume of import in Nov. So, tur price too can be seen under pressure. Weak tone may prevail in cash pulses market this week.
- **Lentils cash market continued to move sideways with changing import duty structures** during last four months. The government had reduced import duty on lentils in the beginning of June (2nd June-2020) from 30 to 10 percent for three months till August 31. The import duty again reverted to its previous level of 30 percent on September 1. With

sensing short supply and higher prevailing prices, import duty was reduced again to 10% and it would be effective till 31st Oct-2020. Lower duty would increase import flow till Oct-2020 and keep prices under check during lean and sowing season. Agriwatch expects range bound movement in Oct under prevailing market fundamentals.

International Market Update:

- **Dry peas production in Canada is expected to increase by 3% to 4.4 million tonne due to higher yield** in 2020-21. The major producing states like Alberta and Saskatchewan may contribute 4.1 MMT. Manitoba and Eastern Canada may harvest 0.3 MMT this year. So, supply side too is expected to be higher by 3% from last year to 4.7 MMT. Export is likely to stay steady at 3.8MMT. The major buyers may be China, the US and Bangladesh like previous year. However, carry-out stocks are forecast to fall marginally despite likely improvement in domestic use. Average price may increase by 4% from previous year to \$275/tonne.
- **Farmgate prices for green peas increased \$30.00 in Saskatchewan, yellow peas prices increased by \$20** in September-2020. Green dry peas prices are currently at a \$35/t premium to yellow dry peas compared to last year when green pea prices were a \$115/t premium to yellow peas.
- **Lentils production in Canada is expected to increase by 29% to 3.1 MMT in 2020-21 due to higher yield** and coverage area. Out of total large green lentils may contribute 0.7 MMT while the share of red lentils may be 2.1 MMT, followed by other types at 0.3 MMT. Supply side seems to stay steady at previous year level due to lower carryin stocks. Canada may export 2.7MMT in 2020-21, lower by 2% from last year. Domestic use may decrease by 3% to 0.249MMT this year. Carry out stocks are expected to increase by 31% from previous year to 0.3MMT. Overall average price is likely to be higher by 20% from previous year.
- **Global chickpeas market traded slightly up taking clue from a tight supply side and demand situation** on physical markets. However, supply side seems ample on longer term as higher production is expected in Turkey and India this year. The biggest change can be seen in desi chickpea output. Chickpeas harvesting is on in Australia. The last production estimates were released in September, at which time the crop was pegged at a record 1.18 million metric tons (MT) of desi and 58,500 MT of kabuli chickpeas.
- **Lentils production in Australia is expected to decrease by 6.89% from 5.34 to 4.97 lakh tons in 2020-21.** It is due to lower coverage (6.11%) of area from last year. Victoria and South Australia are major producing regions that contribute 92% of total production.
- **Global lentil markets continued to trade firm and the firm tone may continue on demand from countries** such as India, Sri Lanka and the United Arab Emirates. Higher demand from these countries has fueled expectations among importers and exporters that prices are likely to maintain an upward trend through the balance of the marketing year. Comments during the online lentil sessions of the week's virtual Global Pulse Confederation lentil sessions suggest farmers in several countries had become disillusioned with prices over the past year, with many setting price targets at which they would be willing to sell remaining new and old crop product on their farms.
- **US chickpea area for 2020-21 is forecast by the USDA to fall by 44% to 0.25 million acres.** With similar yields and lower abandonment, 2020-21 US chickpea production is forecast by USDA at below 0.2 Mt, down 38% from the previous year. The main export markets are Pakistan, the EU and Canada.
- **In the US, the area seeded to lentils for 2020-21 is forecast by the USDA at just over 0.5 million acres, 7% higher** than 2019-20 due to higher area seeded in Montana being offset by lower seeded area in North Dakota. With higher yields and lower abandonment, US lentil production is forecast by USDA at below 0.3 Mt, up 21% from last year. The main US export markets for lentils are expected to continue to be Canada, India and the EU, particularly Spain.
- **For 2020-21, the area seeded under chickpeas fell by 23.89% from 2019-20 to 121 thousand ha** due to the lower farm gate prices received in the previous year. It was 159 thousand ha in 2019-20. Saskatchewan is expected to account for the majority of the chickpea area, with the remainder in Alberta. Production is forecast by AAFC at 239

Kt, down 6.63% from the previous year, due to lower seeded area despite higher expected yields. Supply is forecast to rise from 2019-20 to 539Kt. Exports are forecast to rise from 105 to 125Kt and carry-out stocks are forecast to fall from 250 to 330 Kt in 2020-21. The average price is forecast to fall marginally due to a larger world supply, with the expectation of an average grade distribution. It may hover in the range of \$450 to \$475 per tonne.

- **Daily Outlook:** -Pulses are likely to trade sideways.
