#### According to the AAFC's January Outlook release in February For Chickpea:

- For 2014-15, exports are forecast to increase from 2013-14. The EU-27, the US and the Middle East have been the main markets for Canadian chickpeas to-date. Carry-out stocks are expected to increase for the third year in a row to burdensome levels. The average price is forecast to fall for the third consecutive year, due to larger world and Canadian supply.
- For 2015-16, the area seeded is forecast to decrease from 2014-15, largely due to larger carry-in stocks and lower prices. As a result, production is expected to decrease to 115 kt. However, supply is expected to only fall marginally from last year due to the large carry-in stocks. Exports are expected to be unchanged from last year and carry-out stocks are expected to decrease, but remain burdensome. The average price is forecast to be unchanged as it will be limited by higher expected world supply.

**Australian Chana Production 14-15 Down 18%**-Chickpea production is estimated to have fallen by 18% in 2014–15 to 517000 tonnes, largely because of a 16% fall in planted area to 425000 hectares. The area planted to chickpeas fell in response to declining chickpea prices and low levels of soil moisture at the time of planting. (Source-ABARES )

**Market Outlook for March:**

Chana prices are likely to witness steady to range-bound. Meanwhile, prices are likely to take strong cues from new rabi crop arrivals.

- ✓ Parity/Disparity-Imports are currently unviable and importers are getting disparity of Rs. 2760 per tonne and likely to remain high during March.

### According to the AAFC's January Outlook release in February For dry peas-

- In 2014-15, Canadian exports are expected to increase to 2.9 Mt, with India, China and the Bangladesh as -out stocks are forecast to decrease sharply due to due to lower supply and higher exports. The average price in 2014-15 is expected to fall from 2013-14 as a larger proportion of the crop is feed quality peas which are priced at a discount.
- During the month of January, the on-farm price of yellow peas in Saskatchewan rose by \$30/t while the green pea price was relatively unchanged.
- In 2015-16, seeded area is forecast to rise by nearly 4% from 2014-15 to 1.6 Mha because of higher potential returns relative to other crops, good logistical movement and solid export demand. Production is expected to increase by 10% to 3.8 Mt, due to a return to higher expected yields. Supply is forecast to rise marginally due to lower carry-in stocks. Exports are expected to be slightly lower than 2014-15 and as a result, carry-out stocks are expected to rise sharply but not be burdensome. The average price is expected to remain strong due to strong global demand but slightly lower than 2014-15.

**Canadian Pea Export in Jan.2015 Up Y-O-Y & M-O-M**-In January 2015, Canada's exports 145900 metric tonnes (MT) of peas, up from 128,400 MT exported during the same month in previous year and also up from 110700 export during Dec.2014. #### Import Dynamics(Appendix No 7,8&9)

✓ Imported Quantity-Lower quantity imported during the reported month(0.70 lakh tonne against 0. 98 lakh tonne shipped in January) arrived at Indian ports.

#### According to the AAFC's January Outlook release in February For Lentils-

- For 2014-15, exports are forecast to fall by 6% to 1.65 Mt. India, Turkey and the United Arab Emirates are currently the top three export markets. Domestic use is expected to decrease due to lower supply. Carryout stocks are expected to fall to the lowest level since 2009-10. The overall average price is forecast to be above 2013-14 due to the tight carry-out stocks.
- During the month of January, the on-farm price of large green lentils in Saskatchewan rose by \$65/t while the red lentil price increased over \$80/t.
- For 2015-16, area seeded in Canada is forecast to increase by 11% to 1.4 Mha, due to competitive returns relative to other crops, but may be limited due to quality seed availability. A higher yield forecast is expected to result in production increasing by 17% to 2.15 Mt. However, due to tight carry-in stocks, supply is forecast to increase by only 10% to 2.2 Mt. Exports are expected to be unchanged from 2014-15 at 1.65 Mt despite the larger exportable supply. Carry-out stocks are forecast to increase sharply. With the assumption of a more normal grade distribution and lower grade discounts, the overall lentil price is forecast to increase from 2014-15.

**Canada's Lentil Stock Down 48%**-The stock of Canadian Lentil is down 47.9% to 755 thousand tonne till December 31,2014 from the same date in 2013. The lower stock is mainly due to lower production and strong export movement for the August through December period.(Source-StatCan)

**Canadian Dec.14 Lentil Price Fell 4%** -During December 2014, the lentil prices in Saskatchewan fell to \$594.12 per tonne from \$619.83 per tonne in previous month. Following charts illustrates the monthly comparison of lentil prices: (Source-CGC, Canada)

**Australian Lentil Production 14-15 Up 15%**-Chickpea production is estimated to have surge by 14.46% in 2014–15 to 255000 tonnes, largely because of a 11.57% rise in planted area to 189000 hectares. (Source-ABARES )
